A cloud of black smoke rose several hundred feet into the air when disaster struck the Joseph Boll farm last Tuesday afternoon.

Barn fire trips zone alarm

By Dieter Krieg

PENRYN — Volunteers from six fire companies battled a barn fire near here, at the Joseph Boll farm, on Tuesday afternoon.

Believed to have been started by an electric heater, the blaze, which engulfed and destroyed the entire upper portions of the structure, was visible from as far as Lancaster — about ten miles south of here, a fire official said.

The fire started at about 12:15 p.m. with what was described as an explosion and it spread to the roof and hay mows within minutes. A spectacular column of black smoke rose straight into the air for several hundred feet before the fire alarms had even gone off. Fifteen minutes later most of the barn, located on Fairview Road, 3½ miles northwest of Lititz, had already been consumed by flames.

Lost in the blaze were 3,500 bales of hay, 500 bushel of shelled corn, three tons of soybean meal, a bin wagon, and a weed sprayer. There were no cattle in the barn at the time, and the livestock area itself was untouched by flames.

Boll's son, Richard, who operates the farm, told us he was just coming home for lunch from a neighbor's field, where he had been cutting silage, when he discovered the tragedy. "The fire was in a bin wagon of shelled corn when we got home," he said.

The elder Boll was in his home about a half mile away. He said he heard what sounded like an explosion and immediately looked out the window. It was then that he noticed the fire at the barn.

Bumper corn crop seen

By Dieter Krieg

LANCASTER - Reports from various sections of Lancaster County indicate that this year's corn crop is going to be a good one, possibly better than last year's.

Paul Howard of Red Rose Feeds, Quarryville, says his company has been receiving the new crop for about two weeks now and according to what he sees and what farmers tell him, "we're going to have a really good yield down here." He described the crop as being of the "bumper" variety.

Not only are the yields per acre very good, farmers all across the county also planted more acreage - which has caused some of them to go around inquiring about the possibility of putting up more storage bins.

Moisture content is favorable in most areas too. Howard told us that it was "considerably lower" than anticipated, ranging from a low of 23 per cent to a high of 28. The full-season corn is also down in moisture, and if favorable weather is with us from here on in, it will mean that corn will be drying pretty well, and yields will continue to be good.

Pennfield Corporation's Al Landis told us that his customers give him the impression the 1975 crop "will be as good as last year's or just about." Dave Heistand of Heistand Brothers, Elizabethtown, agreed word for word with the crop estimate made by Lanids. The report from the New Holland area is that corn over in that section is

Dairy market sets records

LANCASTER — "Last week was good news week for area dairymen," Dr. James E. Honan, general manager, of Inter-State Milk Producers' Cooperative, told a group of officers and delegates for Inter-State's District 7, here Monday night.

Within one week, reported Honan, the Pennsylvania Milk Marketing Board climaxed three years of hearings with a new order for the Philadelphia Milk Marketing Area; Secretary of Agriculture, Earl Butz, raised support levels back to 80 percent parity; and Order 4 milk prices hit their highest mark in history.

"It's certainly great to share with you some good news," Honan said. "Too long has the dairyman been the victim of the cost-price squeeze."

Honan credited those dairymen at the meeting for helping to bring about the good news. Those in attendance, he said, were instrumental in organizing the trip to Washington, D.C. last November, which brought national publicity for the first time to the dairyman's plight. About 1,400 Inter-State members, made the trip.

"That trip," he said, "soon resulted in (Secretary of Agriculture Earl Butz) raising the support level to 80 percent parity and adjusting it again last week was no coincidence."

That first increase in dairy supports this year came in

Cloister FFA Team

Wins contest in Ohio

By Melissa Piper

EPHRATA - Three Ephrata High School youths recently captured first place at the American FFA Dairy Cattle Judging Contest held in Columbus, Ohio, Oct. 4.

The youths, Kerry Boyd, son of Mr. and Mrs. Elmer Boyd, Ephrata R1; Harry Leininger, son of Mr. and Mrs. Harry Leininger, Ephrata R1, and David Haldeman, son of Mr. and Mrs. Christ Haldeman, Reinholds R1, comprised the team (Cloister FFA) which competed against a total of 113 other teams.

This year marked the second time that an Ephrata team had captured first place in the contest at Columbus. Members representing the school took first in 1971 also. Along with receiving a trophy, the team was awarded a $100 prize.

Solanco Youth Tops the Field

Joe Winters, Solanco High School, was the top individual judge at the event. The son of Mr. and Mrs. Albert Winters, Kirkwood R1; the youth helped the Solanco team place 7th in the event.

Other members of the Solanco team included Bruce Kreider, Quarryville R1 and Marshall Trimble, Drumore R1. The team was coached by Dr. William Fredd.

Ephrata's win at Columbus was not the first for the youths this season. In April, the team placed first at the Penn State Dairy Club's invitational contest and placed third at the State FFA Judging contest. At the Atlantic Rural Exposition, held in Richmond, the team placed second. Before their victory at Columbus, the youths captured first place in the FFA Dairy Judging Forum held in conjunction with the All American Dairy Show. Lewis Ayers, ag instructor at Ephrata High School, coached the team.

Ephrata Wins County Title

For the fourth consecutive year, the Cloister FFA (Ephrata) took first place honors in the County Judging Contest held earlier this fall at Solanco Fair. Over 400 FFA'ers from Lancaster County took part in the contest.

John Weiler, Ephrata FFA'er was also the top individual judge.

Members of the award winning dairy judging team from Ephrata High School look over some of the many trophies they captured this season. Participating on the team were (from left) Harry Leininger, Dave Haldeman and Kerry Boyd. The team placed first in competition at the North American Dairy Show held recently in Columbus, Ohio.

Local Grain

Thursday, October 9

These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn which is per ton.

The average local grain prices quoted Thursday, October 9, 1975 are as follows:

	Buy+	Sell+
Corn		
Old	73.00	78.00
New	47.00	59.00
Shelled	2.73	2.94
Barley	1.82	1.97
Oats		
Local	1.53	1.65
Western	1.64	1.86
Wheat	3.36	3.54
Feed	2.15	2.40

+Buy is the price the dealer will buy from the farmer delivered to the mill. Sell is the price the dealer will sell for at his mill.

Sale Report

Special Feeder Calf Sale

TIR-STATE (Abingdon) - (Oct. 6, 1975).

There were 2,100 head sold. All steers and heifers were graded by Representatives of the VDAC's Division of Markets, Livestock Section on VDAC standards and sold by the hundredweight.

STEERS: Choice & Good 300-400 lbs. 31.00-37.75, mostly 34.00-37.00; 400-500 lbs. 31.00-40.00, mostly 35.50-40.00; 500-600 lbs 39 50-40.75, mostly 35.50-40.75 Medium 300-400 lbs. 26.50-32.00; 400-500 lbs. 26.00-32.00; 500-600 lbs. 28.50-32.50. Common 300-400 lbs. 18.00-24.00; 400-500 lbs. 21.00-24.50; 500-600 lbs. 22.00-25.50.

HEIFERS: Choice & Good 300-400 lbs. 18.00-23.00; 400-500 lbs. 19.00-27.50; 500-600 lbs. 22.50-25.25. Medium 300-400 lbs. 16.00-17.50; 400-500 lbs. 18.00-23.75; 500-600 lbs. 22.00-23.50. Common 300-400 lbs. 14.00-15.50; 400-600 lbs. 15.00-19.75.

Garbage-to-Energy

More than 50 garbage-to-energy programs are currently operating, or are in the construction or planning stages, throughout the United States Almost all of these systems call for the recovery of steel cans, since steel's magnetic properties make it the easiest material to remove on a large scale for recycling Also, the removal of the metal increases the efficiency of the remaining refuse as fuel and reduces the amount of material that must be landfilled

The Golden Fleece Tarnished For Early Sheep Enthusiasts

Some 40 years before gold fever struck on the American West Coast, a different kind of money madness hit sheep men in the East

As the 18th century melted into the 19th, the regally pedigreed and richly fleeced Merino sheep of Spain produced the finest wool in the world The Spanish crown had always cannily banned the export of breeding stock, but Napoleon's expeditions into the Iberian peninsula changed all that

As the Spanish government crumbled about them, British and American diplomats on the spot bought from the best flocks David Humphreys, the U S minister to Portugal, and William Jarvis, the minister in Madrid, sent home entire flocks of the finest rams and ewes the two countries had to offer

Eli Whitney, the famed inventor of the cotton gin, was a man who appreciated fine wool, too. After paying $300 for a ram and ewe, Whitney wrote to a friend that they were, " dirty looking animals, but I have already been offered four hundred for the pair The demand is much greater than can be supplied '

Pennsylvania sheepmen seemed especially infected by the Merino craze, and between 1810 and 1816, helped stimulate one of the wildest speculative binges in American agriculture

The demand for better wool in America lead to feaverish speculation and many farmers paid high prices for imported sheep.

Between 1810 and 1811, some 20,000 Merinos were shipped from Lisbon to America, and they created a furor Common wool from the sheep then in the New World was short stapled and coarse, and sold for less than 40-cents a pound. Merino wool in 1811 sold for 75-cents a pound Two years later it was up to $2 to $3 a pound, and in January of 1816, Merino wool reached a high of $7 06 on the New York market From that point, there was no way to go but down, and in October of 1816, Merino wool was back down to 68-cents a pound

A Bucks County, Pa., observer of the time noted, "The Merino sheep mania raged in this county from 1810 to 1815 Full-blooded Merinos sold as high as $300 to $500 each and in a few instances, they brought $1000 . . A man in this county sold his wheat crop, 200 bushels at $3 a bushel and gave the whole of it for one sheep When the fever subsided, these same sheep dropped to $5 and $10

As the speculative fever came to an end, many farmers, bitterly disappointed, sacrificed their entire flocks A butcher in Philadelphia reported buying an entire Merino flock for a dollar a head As the animals were herded off to slaughter, the owner of the flock pointed out one of the rams to the butcher, and reported that it had been imported at a cost of $1000.

will establish my covenant between me and thee, and thy seed after thee, in their generations, for an everlasting covenant, to be a God unto thee, and to thy seed after thee.

Old Farmer's Riddle: Why are fish so smart? (Answer below.)

Ask the Old Farmer Some 60 odd years ago a national magazine carried a story of a man named Knowles who set out to prove that he could fend for himself with nothing but his bare body He was taken deep into the woods in northern Maine where he lived on edible berries caught fish with his bare hands covered his body with animal skins etc Was there any truth to this story? N S Schenectady N Y

We remember a Knowles claim called a hoax but there was a rumor that someone slipped into the woods and brought him scrub and blankets

Home Hints [illegible]

OLD FARMER'S WEATHER FORECASTS

New England Cold snap through midweek then much warmer week ends with showers

Greater New York-New Jersey Early week showers and turning much cooler clear and warmer latter part

Middle Atlantic Coastal Rain in central and north through midweek and cooler rest of week generally clear

Piedmont & Southeast Coastal: Clear and hot to start then rainy and cooler latter part clear and warm

Florida Cloudy and rainy in south all week rain in central and north midweek

Upstate & Western N Y -Toronto & Montreal: Still showery to start then clear and cool through midweek weekend brings light showers

Greater Ohio Valley Rain at first then clearing and much colder week ends with rain

Deep South Showers to start then clearing and cool by midweek warm weekend

Chicago & Southern Great Lakes Rain ends then clear and mild rain latter part very heavy in the west

Northern Great Plains-Great Lakes Clearing and cold first part of week rain in central and east from midweek

Central Great Plains Rainy through midweek in north and west heavy rain in east and hail in central on weekend

Texas-Oklahoma Week begins with rain then sunny and hot through weekend

Rocky Mountain Partly cloudy early week then rain in north light showers in central and south

Southwest Desert Week begins with heavy rain in east partly cloudy in west rest of week clear and hot

Pacific Northwest Entire week generally cloudy with rain in north midweek and in south by the weekend

California Some light rain in north then clearing clear and cool in south latter part

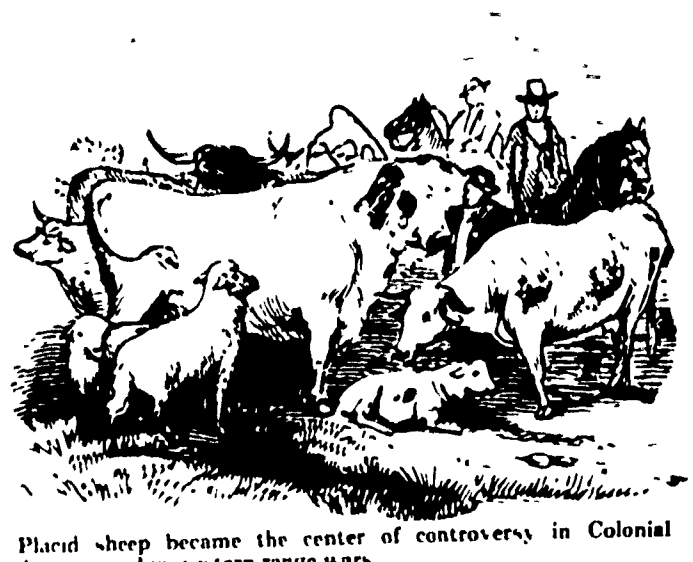
Sheep Figured in Revolution As British Curbed Industry

America's first shepherds kept watch over a pretty scrawny flock of sheep They were so sorry looking in fact that around 1780 a disgusted English farmer Richard Parkinson noted They look surprisingly like goats

Sheep were introduced early into the Colonies the first were brought to the West Indies by Columbus in 1493 Dutch and Swedish settlers on the Delaware river brought sheep from their homelands In fact the Swedish Crown had instructed the colonial governer Johan Printz to direct his attention to sheep to obtain them of good kinds so that presently a supply of wool of good quality may be sent over to this country

Wool not mutton was the primary reason for keeping sheep in early America The sheep were small long legged narrow in breast and back and slow to mature They stood perhaps 30 inches high and weighed only 10 to 15 pounds a quarter when dressed out The fleeces averaged two to three pounds of coarse short staple wool which was used in the household manufacture of homespun



Placid sheep became the center of controversy in Colonial America and in western range wars

Although sheep were kept mainly to clothe the family, a commercial woolen industry did get an early start But, industry grew slowly because of British opposition In 1699 the mother country imposed a regulation which forbade the colonies to export wool to other countries or even to each other Thus the only market for American wool was Britain herself And, except for homespun the pre Revolutionary colonists got nearly all their manufactured woolens from Britain

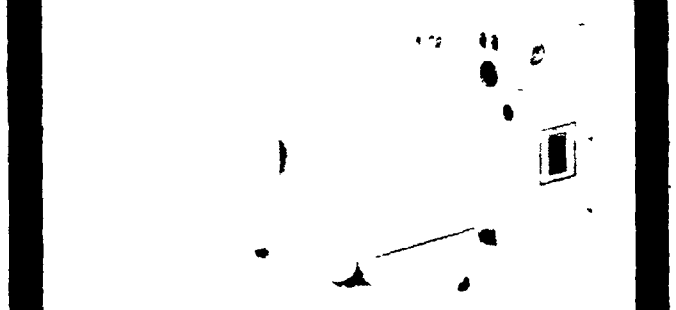
Increasing resentment over British rule, though, led to efforts aimed at making this country independent of the mother country for many imported items, including woolens Shortly before the outbreak of the war, a group of Philadelphia butchers signed an agreement which said they would not slaughter sheep so that more wool could be produced And it was considered a patriotic duty to wear nothing but homespun at all times, especially at public functions This rebellion lent impetus to the woolen industry here, and for a time during the Revolution and after, that industry flourished.

After the war, though British woolens again came to America They were abundant and low priced Even with protective tariffs, the infant American industry found it hard to keep up with British competition In 1789, the Americans imposed a five per cent tariff on British woolens In 1807, they raised it to 17½ percent, and 1812 to 35 per cent

About 1800, sheepmen started improving their flocks with rams imported and sometimes smuggled from Europe Merinos from Spain, with their very fine wool and regal bloodlines, did much to improve the American animals By 1840, some two million sheep, all profitable wool producers, were nibbling on the verdant slopes of Vermont and New Hampshire

About that time, sheepmen began to emigrate westward Although they found spacious pastures in the West, these pioneering sheepmen also found hostile cattle producers The range wars between sheepmen and cattle producers lasted even into the 20th century, putting the placid sheep at the center of the bloodiest chapter in the history of American agriculture

When Power Fails depend on PINCOR Electric Plants



16 KW 25 KW 50 KW

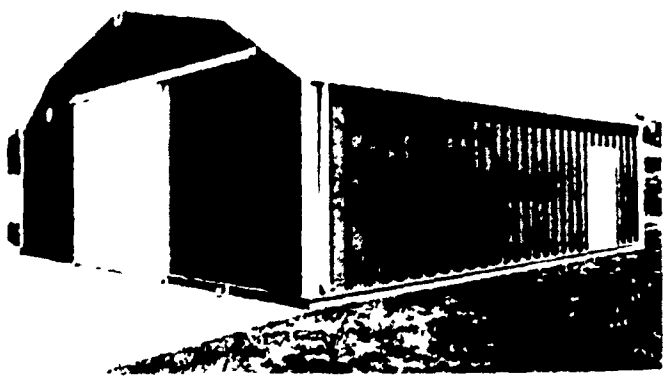
Utility building

EPHARATA - A compact new utility building design, featuring a gambrel roof configuration has been introduced by Wickes Building, a division of The Wickes Corporation. Named the 'Town & Country', the new structure combines beauty, efficiency and economy in an all-purpose storage building that will enhance any homesite - suburban, ranch, farmstead or vacation property.



According to Stan Kline, Wickes Buildings manager for this area, the pre-engineered gambrel roof design also offers many of the practical advantages of conventional clear span construction, including plenty of unobstructed space for vehicles, workshop or equipment storage.

Basic building size is 30' wide x 40' long, with longer building sizes available through addition of modular units. Standard festure include heat-reflective aluminum roof and choice of white or color aluminum siding with contrasting trim. Building is also standardly equipped with 9'2" high, 10' wide sliding end door and 6'8" high, solid-core aluminum-clad walk-in door.

Wickes Building Sales and Construction Center, Highway 222 North, Ephrata, Pennsylvania 17522.

Bicentennial Ag Book

FORT ATKINSON, WIS. — The Growing of America . . . 200 Years Of U.S. Agriculture has been published by Johnson Hill Press, Inc., Fort Atkinson, Wisconsin, in cooperation with NASCO, also of this city.

The attractive, 144 page hard-bound volume, with over 200 photographs and illustrations, follows the development of agricultural practices, government farm policies, organizations, equipment, livestock, poultry, and crops from Colonial Times to the present.

Highlights in The Growing Of America include frustrations and successes with early farm equipment; government recognition of the importance of agriculture following the Civil War; the settling of the West; the organization of farm groups including cooperatives; the Dust Bowl and realization of the need for soil conservation; and the contributions of America's rural residents during both World Wars.

The authors summarized the goals, purpose and scope of this book when they stated: "As our country approaches its Bicentennial, no industry deserves more recognition for its role in the development of the U. S. than agriculture. Farmers led the American Revolution, fought its battles, supplied its food, and went on to new frontiers. New challenges continue to be met boldly by American farmers, and on the eve of their country's Bicentennial, they can feel pride in agriculture's contribution to the quality of life in the United States."

Copies of The Growing Of America will be available from participating local Future Farmers of America (FFA) Chapters at high schools across the country, and from NASCO, 901 Jamesville Avenue, Fort Atkinson, Wisconsin 53538.

NASCO began 35 years ago with a direct mail offering of equipment and audio visual materials to agricultural schools. Today the firm supplies products for agriculture and education throughout the free world.

Johnson Hill Press, Inc., specializes in the editing, design, production and mailing of printed communications and produces a wide range of agricultural publications.

Ciba-Geigy Changes Aatrex 4L Jug Design

Ciba-Geigy Corp. says it will replace its one and five-gallon plastic jugs for AAtrex 4L liquid herbicide with a two-and-a-half gallon plastic container for the 1976 sales year.

The new jug reportedly is easy to carry and pour. Growers can empty the two-and-a-half gallons smoothly and completely into spray-rig tanks in about 13 seconds. Contents of the jug can be measured accurately with a built-in, calibrated sight gauge. The label and an instruction booklet are attached to the side.

Three years of research including a season of test marketing have gone into development of the new container, according to company researchers.

SORGHUM SEED

OLIVIA, MN. - "Trojan brand hybrid sorghum is now available for sale for 1976 planting." That's the word from Murray Robinson, Director of Marketing, Pfizer Genetics, Inc., headquartered here.

The addition of sorghum to the lineup of products available from Pfizer Genetics is the first of several expected product additions in the area of seed genetics, Hybrid sorghum, as well as hybrid seed ocrn, will be sold by Pfizer Genetics, Inc. under the Trojan brand name.

(Pfizer Genetics, Inc, is a new company fromed as the result of the merger of Trojan Seed Company, Olivia, Mn; and Clemens Seed Company, Beaman, Iowa. Soybean and oat seed will be sold under the Clemens brand name.)

Trojan brand hybrid sorghum is currently being contract-produced for Pfizer Genetics, Inc. The product will be available for sale through the established Trojan brand seed corn dealer network. As expected, the major marketing effort for the new hybrid sorghum lineup will be concentrated in grain sorghum areas primarily in the western and southern Cornbelt.

Explains Robinson, "We have been looking at the addition of this seed line for quite some time, and for the past several months have been working hard at the planning and developmental stages in preparation for entry into the hybrid sorghum market. We have an excellent initial lineup of sorghum hybrids."

Currently available for booking are five grain sorghum hybrids, one forage sorghum hybrid, and one sorghum-sudangrass hybrid - all carrying the Trojan brand name.

Sugar Beet Industry Got Off to Sour Start

Napoleon wasn't the only casualty of Waterloo When he met his match that June day in 1815, Bonaparte saw shattered not only his dreams of empire, but an infant beet sugar industry, although sugar beets were very likely not the most pressing thoughts on his mind as he whiled away the exile years on Elba

Sugar was a scarce commodity in Napoleonic France, and it was with special glee that the emperor visited Benjamin Delessert's small factory in the hamlet of Passy in March of 1811 Delessert had developed a practical process for producing sugar from beets, and when Napoleon saw the results of his countryman's work, he ripped the Cross of Honor from his imperial chest and pinned it on the startled Delessert A week later, Napoleon signed a decree that allowed one million government francs to be spent on sugar beet research, and by 1813, there were 334 small beet sugar factories in France

It's perhaps fitting that Napoleon should have figured so prominently in the history of the sugar beet In both Europe and America, the sugar beet industry has time and again found itself facing a seeming Waterloo

It seems quite possible that the first to use beet sugar in America were West Coast Indians who used species of wild sugar beet that grows in central California In 1775, Pedro Fages, a Spanish captain who explored parts of that state wrote, 'The tribes of the Sierra made also quantities of molasses, candy, and sugar, that is not unworthy of the fame of these people, and it is extracted from certain species of vegetables "

The first recorded effort at establishing an American sugar beet industry began in 1830 James Ronaldson, the first president of the Franklin Institute, organized a group of his Philadelphia friends into the Beet Sugar Society of Philadelphia In 1836, the society sent one of its members, John Pedder, to Europe to make a thorough study of the industry in France

Pedder sent back 600 pounds of beet seed which was planted Unfortunately, it was planted too late in the season to develop a crop, and the principal accomplishment of the Society was publication of Pedder's glowing report on the possibilities for a beet sugar industry in this country

In 1838, Edward Church and David Lee Child produced some 1300 pounds of beet sugar in their Northampton, Mass , plant Economic difficulties closed this plant in 1841, but it did produce the first beet sugar in America

Many miles to the west, at White Pigeon, Mich , a group of farmers and townsfold organized a beet sugar company They built a factory in 1838, but even with a $5000 loan from the state of Michigan, the venture failed

These early failures, and many subsequent ones, were doomed from the start by a lack of technical knowledge and skill The extraction of sugar is a rather complicated process which even then hinged on chemical extraction. Modern day beet sugar plants cost a minimum of $30 million to build

The Mormons in Utah were the next to attempt the manufacture of beet sugar They bought a plant in France in 1852 for $12, 500 They took it to Utah by boat, barge and ox team, and produced only an inedible syrup for all their labors

In fact, between 1838 and 1879, 14 sugar factories were erected on American soil - in Maine, Massachusetts, Delaware, Michigan, Illinois, Wisconsin, Utah and California All failed

In 1879, E H. Dyer took over a bankrupt sugar plant in Alvarado, Calif , and turned it into the country's first successful beet sugar enterprise.

HERE'S THE CORN VORIS VIGOR-PROVEN

V-2662 - 125 Day Maturity
Very Dependable, Large Ears, Heat & Leaf Disease Resistant, Deep Kernal.

V2642 - 119 Day Maturity
A Champion. Short-stalked, upright leaf, with a really high yield and potential. Moderately high population

V2562 - 113 Day Maturity
Tall, stiff stalk, excellent standability, good disease resistance but most of all an outstanding yielder

V2442 - 103 Day Maturity
Best adapted to combine harvest, very healthy hybrid but fast drying Excellent standability compared to other hybrids in its maturity class Top yielder.

V2402 - 102 Day Maturity
Large, long ears tolerates high population very well; will sucker under excellent early growing conditions.

V2382 - 99 Day Maturity
95 day hybrid of excellent dependability, very stiff stalk, large ears Excellent seedling vigor.

Kicking either me or the milking machine at just about every milking was the last straw as far as I was concerned.

"It's no wonder Mr. Fisher sold you, Bonnie," I said with disgust. "You don't produce over 60 pounds of milk per day, you dropped a midget of a calf, you kick like a mule, and you're putting too much of my feed on your back!" I protested, punctuating the remarks with cracks from the milking machine strap. After having had her in the herd for more than two months, with lots of trouble and little pleasure, she didn't need to be pampered anymore. The only good quality she had was her high (4.9 per cent average) butterfat test, which perennially saved her from the slaughterhouse.

My disappointment with Bonnie carried over to her little scrubby heifer calf, which I had named "Billie." She was such an undesirable thing that a local calf buyer didn't want it, and I didn't want to take a chance at the auction because she was too small yet.

Weeks and months passed. Bonnie's production didn't improve, but she was, at least, easier to get along with. Billie didn't grow much and her stature became worse instead of better. Short between the legs, round, and beefy-looking. Billie always received her feed without a show of affection — because I simply wasn't interested in her. But she was never abused either — just ignored.

Billie, who is pictured in the right foreground of the title picture this week, never caught my eye, was never petted, and I anticipated little but problems from her when she eventually freshened.

The first time I put a milker on Billie, I expected her to send me to Kingdom Come. I put the milker on carefully and nervously.

Then Billie turned her head, with her mouth still full of feed, and began to lick my arm. Then she licked my face, and instead of either of us being nervous — she was very relaxed, and I just about melted. Billie wanted to be a pet even though I had never shown her any affection, and in spite of the fact that her mother was the fiercest kicker in the 55-cow herd.

A daughter of "Howacres Reflector Model," Billie became one of the finest looking animals in the herd. She had stretched out nicely in body length and height, and was my pride and joy after that first milking. As a bonus, she milked like a fool and had her mother's fat test too. Somehow, the fat test was all she inherited from her mother, and that was all I would have wanted her to have.

Such an experience is one of the rewards a dairyman has in his life on the farm, and the satisfaction derived from it is priceless.

One bad one spoils the bunch

Brucellosis and tuberculosis are on the rise again, according to officials in Lancaster County, other counties, and other states. The diseases, which had been pretty well under control during recent years, have apparently made a comeback and are the subject of conversation and print in many areas. Following is a case from out of Vermont - which could also apply for Pennsylvania, North Carolina, or anywhere else. We reprint "A lesson in brucellosis prevention" from the October 1975 issue of the "Transmitter," published by Atlantic Breeders Cooperative:

Vermont was one of the first states in the U.S. to be declared bruce loss free and for years there was no evidence of the disease in the state despite good surveillance efforts.

Cattle owners became so lulled about brucellosis that they became complacent about it and bought cattle through dealers from out-of-state and Canadian herds. Unbeknownst, most of the cattle had health charts, but many of them were infected or exposed to brucellosis before they reached Vermont.

Appearance of the disease in Vermont herds in the past few months promoted an all-out crash program to seek out infected herds. Already, 35 infected herds have been found by a task force of 26 USDA veterinarians and technicians who are conducting a farm-to-farm blood test.

Pennsylvania has the same problem with reintroduction of brucellosis. Infected and exposed cattle have been brought into Keystone herds. Dr. Sam Guss, Penn State extension veterinarian advises those who buy cattle regardless of their source or vaccination status to isolate them and have them tested negative for brucellosis and brucellosis before exposing them to them.

To do less than that is like playing Russian roulette with your herd, cautions Dr. Guss.

THE BIBLE SPEAKS

BY LAWRENCE W. ALTHOUSE

ABRAHAM LAUGHED

Lesson for October 12, 1975

Background Scripture: Genesis 15 through 18:15.

Devotional Reading: Exodus 16:2-12.

Abraham laughed! But then, why shouldn't he have laughed? It was better than becoming cynical or angry. God had made a ridiculous promise to Abraham and he had to make some kind of response!

Consider what God was saying: "... I will make my covenant between me and you and will multiply you exceedingly ... you shall be the father of a multitude of nations" (Genesis 17:2,3). It sounded like a wonderful promise, but how could the Lord ever deliver the goods?

First of all, how could Abraham be a "father of a multitude of nations" when he didn't even have a son?

Well, God seemed to have an answer for that objection: "I will give you a son by her (Sarah, Abraham's wife)" (Genesis 17:16).

When Abraham was ninety-nine

Ah yes, Lord, but you're forgetting one little fact: Abraham is ninety-nine years old and Sarah is ninety — in anyone's book that is well past the child-conceiving period of life!

So, confronted by God's strange and preposterous promise, "Abraham fell on his face and laughed, and said to himself, 'Shall a child be born to a man who is a hundred years old? Shall Sarah, who is ninety years old, bear a child?' " (17:17).

No, experience indicates that such things just do not happen.

Yet, despite his laughter, despite his doubt, Abraham was a man of faith. It had been his faith that had led him to answer God's call to leave his home in Haran and journey to a strange and unknown land. It had been this same faith that sustained him in the years that had followed.

Call him "Isaac"

During these years in Canaan Abraham had greatly prospered and it would have to be admitted that God's providence had hovered over him and granted him both blessing and security.

Yet, the experience in Canaan, for all of this, was considerably less than what God had promised and was promising again: "And I will establish my covenant between me and you and your descendents after you throughout their generations for an everlasting covenant ..." (17:7) and "I will give to you and to your descendents after you ... the land of your sojournings, all the land of Canaan, for an everlasting possession ..." (17:8).

God also had a sense of humor; since Abraham had laughed at his promise of a child in their old age, God would give them that child and instruct them to call his name Isaac. So the child would be named for his parents' laughter at God's promise.

So Abraham and Sarah, though they found God's promise incomprehensible, when they stopped laughing and doubting, began to believe in and trust the Lord who had blessed them so richly in the past. And because they believed, they received what God promised and the covenant was fulfilled.

Abraham laughed at God's promise, but he went on to believe and see the promise become a reality.

So may we move on beyond our doubts to faith.

To Topdress Alfalfa

Fall is one of the good times to make an application of a phosphorus-potash fertilizer on alfalfa fields. After the last cutting and before the ground freezes alfalfa plants will be strengthened by extra amounts of both phosphorus and potash as found in the 0-20-20 or 0-15-30 fertilizers. Nitrogen should not be needed on established stands of alfalfa; also; the application of manure to stands of alfalfa to be kept for another season is not suggested because the nitrogen in the manure will encourage grasses and weeds that will tend to crowd out the alfalfa plants. Manure should be applied to ground going to row crops next year. Well fed, healthy alfalfa plants going into the winter should give maximum yields next summer.

To Clean Corn Cribs

The need for more attention to the cleaning and spraying of the corn crib, or other corn storage, still exists on many farms. The old corn should be removed before the new corn is put into the crib. Also, the structure or bin should be sprayed with an insecticide such as Malathion or Methoxychlor to eliminate all grain insects. A residual spray on all parts of the storage should kill insects and insure good keeping quality for the new crop. Corn continues to be a very valuable farm product and effort should be made to put it into good storage facilities. The spraying should be done at least 24 hours before new grain is put into the crib.

To Make High-Moisture Corn

The practice of soring high-moisture corn is gaining among livestock and dairy producers. Many fields of corn are approaching the correct time to be harvested in this manner. According to research workers the best moisture content for high-moisture ear corn is to be ground when 30 to 35 percent moisture. For high-moisture shelled corn the kernel moisture should be between 25 and 30 percent. The feeding of high-moisture ground ear corn or shelled corn is becoming very popular in most areas of the country. With the harvesting of high-moisture corn the crop can be removed from the field earlier with less down stalks and the seeding of fall grain can be made earlier. On the other side, when the crop is made into high-moisture corn the possibility of selling the corn is limited in most areas.

To Provide Water Supply

Since the first week in October was Fire Prevention Week, we're reminded of the need of an adequate supply of water to fight farm fires. Plans might be made in advance for this emergency. Farmers with farm ponds should have sufficient supply of water providing the fire truck can get within 25 feet of the water; this means an all-weather lane or road leading to the pond. Fire trucks are heavy and in wet weather or during the spring dirt lanes of sod fields might be too soft to permit the truck to get to the water. We urge some attention to the need of having a stone or gravel road to the edge of the pond. A fire truck bogged down in the mud between a hard road and your pond will not be of much help in putting out the fire. Be prepared for any fire emergency.

Agrifacts . . .

The farmer always had to [illegible] with the weather. The [illegible] summer was [illegible] for corned one-half inch [illegible] in May, a three-inch [illegible] fell in June and ice was [illegible] eighth inch thick in [illegible]

Index of prices sets records

WASHINGTON — The Index of Prices Paid to Farmers increased three percent during the month ended September 15 and hit its highest point since March of last year.

Hog and milk prices hit record highs. Prices for beef cattle, eggs and wheat all increased and these gains more than offset declines in the prices for corn, potatoes and soybeans. The result: The Index of Prices Received by Farmers increased 6 points (3 pct.) during the month ended Sept. 15. At 193 (pct. of its Jan.-Dec. 1967 average), the index was up 12 pct. from a year earlier and to its highest point since March 1974.

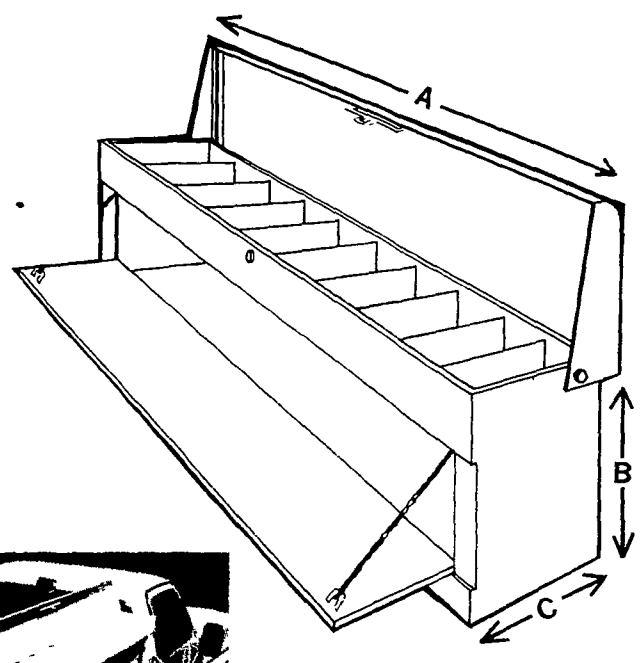
The meat animal index increased 4 pct. to 196 and was 29 pct. above a year earlier as hog prices moved up $2.50 per cwt. to a record high $58.50 that topped the previous high of Aug. 1973 by $2.20. The dairy Products index increased 6 pct. to 173 - up 12 pct. from a year earlier as all milk sold to plants hit a record tying $8.96 per cwt. and milk eligible for fluid market hit a record high $9.21 per cwt.

Meanwhile, the Index of Prices Paid by Farmers continued its rise, moving up 2 points (1 pct.) to 189. It was 14 points (8 pct.) above a year earlier and, of course, record high.

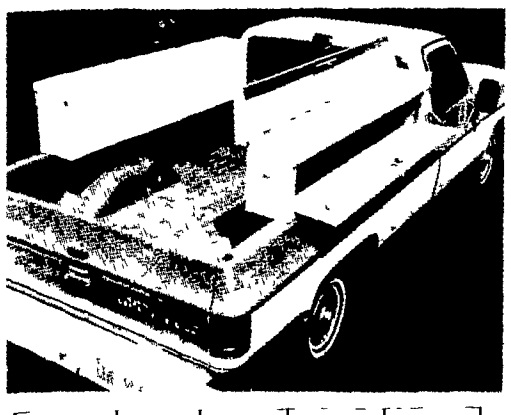
A million-bushel mountain of wheat dwards a farmer as he looks at the pile on the ground at the Union Elevator in Lind, Washington. Some $14,000 worth of plywood panels help protect the wheat from the ground. This is typical of wheat in Northwestern states which is awaiting to be shipped to ports for export.

TOP KICK

TOPSIDE UTILITY BOX



"TOP KICK" boxes are ideally suited for popular - sized pickup models and are painted a gleaming while baked enamel.



MODEL	A	B	C	Shipping Weight

Pesticide users must be certified

Following October 1976, pesticides classified for "restricted use" may be applied only by or under the direction supervisor of a certified pesticide applicator.

To facilitate the education of and certification of such applicators the southeast extension region will be offering a course for interested persons beginning in December.

The core manual textbook which will be required for the course is the Penn State Ag correspondence course 181. Interested people are asked to order the book now and begin the study of the material before classes begin. The books cannot be obtained from the extension office but must be ordered from Penn State.

Classes for study are scheduled as follows:

Training Meetings for Commercial Applicants

A. Review of Core Manual Textbook, followed by required Exam No. 1 Dec. 15 - Central Chester Co. Vo-Tech School, Coatesville; Dec. 16 - King of Prussia Mall, Plaza Theatre; Dec. 17 - Warrington County Club, 3 mi. south of Doylestown, left off Rt. 611 and Almshouse Road, rear of King's Plaza; Dec. 18 - Berks Co. Agricultural Center, Leesport, 2 mi. west of Reading Airport; Dec. 19 - Lehigh Valley Dairy Coop. Auditorium, Allentown;

9:30 to 4:00 P.M. - Registration $2.00 - Use Form No. 2 - Reservation Deadline, December 1.

b. Sessions for Occupational Categories of Certification, followed by required Exam No. 2. Jan 13-14 - Turfgrass Pest Control, Westover County Club, Norristown; Jan. 15 - Agricultural Categories, Kulpsville Holiday Inn; Jan 16 - Agricultural Categories, Central Chester Co. Vo-Tech School, Coatesville; Feb. 10-11 - Ornamental Pests; Feb. 24-25 - Household, vertebrate, invertebrate, wood destroying pests, and fumigation - King of Prussia Mall; Mar. 2 - Industrial Weed, right-of-way, aquatics - King of Prussia Mall.

More details on the "B" Sessions will be announced at the basic meetings scheduled for December. A commercial Applicator may choose to be tested and certified in several of the above categories.

Training Meetings for Private Applicants

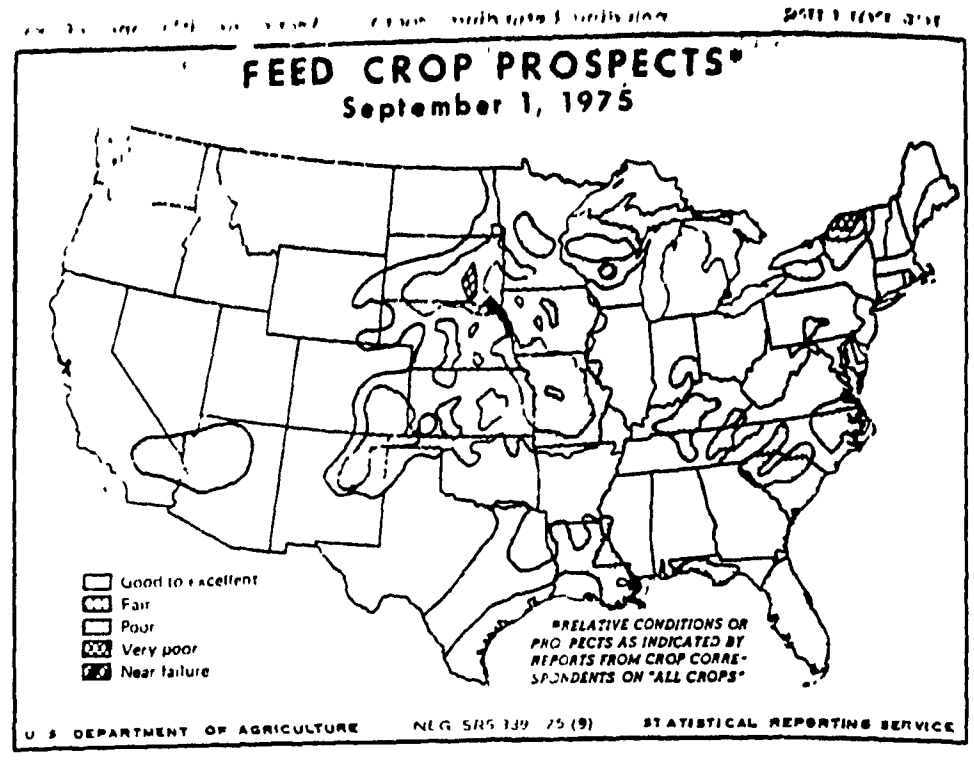
These meetings are held for the private applicant who desires additional training on the Core Manual Textbook to supplement his own home study.

No exams will be conducted at these meetings, as applicants take the private applicator exam at home open book style.

Feb. 9 - Berks Co. Agricultural Center, Leesport, 2 mi. west of Reading Airport; Feb. 12 - Montgomery Co. 4-H Center, Lansdale; Feb. 16 - Central Chester Co. Vo-Tech School, Coatesville; Feb. 18 - Bucks Co. Extension office, Neshaminy Manor, Doylestown; Feb. 19 - Lehigh Valley Dairy Coop. Auditorium, Allentown.

The above meetings are scheduled for 1 00 to 4:00 p.m , with a repest session at the same location in the evening from 7:00 to 10:00 p m

No reservations and no registration fees are required for the private applicator meetings.



The first Geneva Convention was held in 1864 to determine the proper treatment of wounded soldiers

ICE FOLLIES EXTENDS SHOWS AT HERSHEYPARK ARENA TO CELEBRATE 40th ANNIVERSARY

HERSHEY — Ice Follies will return to the Hersheypark Arena, October 16 thru 26 for 16 performances, in a special 40th anniversary edition of one of America's greatest family entertainment productions.

Last year, Shipstads & Johnson Ice Follies scheduled 9 performances, drawing over 50,000 people, including 3 standing - room - only shows, making it the most successful Follies engagement at the Hersheypark Arena in more than a decade.

Richard Dwyer, "Mr. Debonnaire," celebrated his 25th anniversary at the Arena last year by receiving a 25 pound bag of silver - wrapped Hershey Chocolate Kisses. "I felt very honored for the recognition from such an outstanding organization," comments Dwyer, "It's always a thrill to return to the Hersheypark Arena as it's one of my favorite places. I truly feel a part of the Hershey family."

Dwyer is back this season to make the romantic melodies sung by Mr. Tony Bennett, the smoothest thing on ice. Susan Berens, his skating partner and Ice Follies star for 9 years, adds to the champagne elegance of this sparkling and talented couple.

Along with the nostalgic return to romance this year's show will present original Ice Follies props and memorabilia of the past 40 years.

Reserved tickets are now available at the Hersheypark Arena Box Office or at any Hershey ticket agency.

ED ESHLEMAN'S WASHINGTON REPORT

Recently, the United States House of Representatives took up the defense appropriations bill. This is the legislation to provide money for our military establishment.

As might be expected, debating this bill was a time-consuming task. It provided those Representatives who would spend Federal funds for anything but defense with their opportunity to attack military spending. Amendment after amendment was offered designed to cut the defense budget.

But what had to be remembered from the outset of this debate was that the bill being considered contained large cutbacks in military spending itself. The committee handling the legislation had trimmed $7.5 billion from the President's defense budget request before bringing it to the House Floor. That cut plus the effects of inflation amounted to more than a 10 percent reduction in military spending for the upcoming year.

Sure, it is nice to grandstand and propose even greater cutbacks. It's nice to grandstand and talk about all the better uses to which this money could be put. But in the end, the responsible legislator must ask himself a basic question: How much cutting is too much?

Personally, I can think of dozens of worthwhile things for which I would prefer to spend taxpayers' money rather than defense. But I'm making those judgements during a period of peace, when the need for defense seems secondary to other pressing priorities.

The trouble is that the likelihood of defense becoming the number one priority overnight is always with us. Pearl Harbor surely taught us that lesson. And we won't have the time to begin building a non-existant defense posture if we are attacked. The means to defend ourselves must be there and must be adequate.

What we do know is that our chief adversary in the world, the Soviet Union, is spending ever increasing amounts on military might. We cannot assume that her intentions are entirely peaceful. Our defense preparations must reflect our evaluation of what is necessary to meet this challenge.

In recognizing these responsibilities, it is also necessary to recognize that actions taken today do not show up in improved defense technology until many years afterwards. One of the main items of debate in the legislation we considered was a new attack plane for the Navy. It is proposed as a replacement for planes already regarded as obsolete. But even if we approved it now, prototypes of the new plane would not be flying until 1980-81 and production could not begin until 1983-84.

What I am saying is that just grandstanding in favor of massive defense money cuts does not speak to some of the tough issues involved. Like everything else, military spending must face the budget axe if we are to come to grips with our budget deficits. I have supported and will continue to support responsible expenditure cuts in this area, but responsibility implies a large measure of good sense.

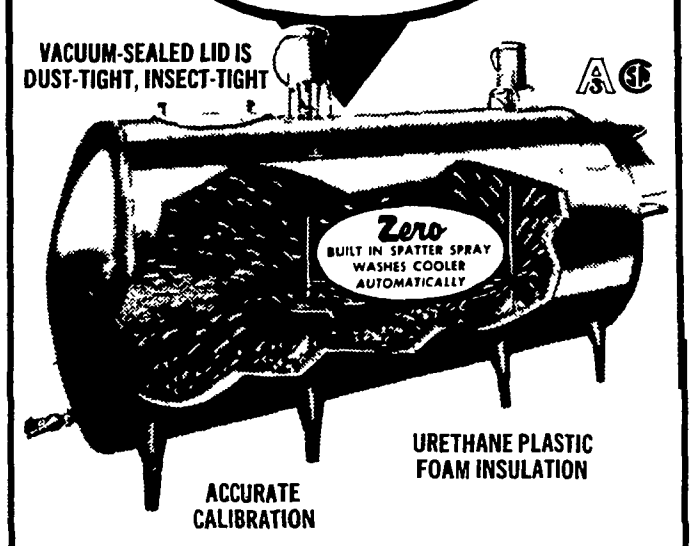
COMPLETELY-AUTOMATED VACUUM AND NON-VACUUM
BULK MILK COOLERS
—WITH BUILT IN SPATTER SPRAY AUTOMATIC WASHER



SAVE MANY HOURS OF CLEAN-UP TIME EVERY WEEK—AND HAVE A CLEANER BULK TANK!

If you need a new, larger bulk milk tank—investigate the new Model "Seventies" ZERO! For it's the only farm bulk milk tank on the market today that has a completely-automated, built-in, "push-button" self-cleaning and sanitizing system. Other bulk milk tank manufacturers have copied ZERO's round design and vacuum. But there's still no bulk tank cleaning system that cleans as thoroughly as ZERO's patented, built-in SPATTER-SPRAY Automatic Washer.

See above how the Spatter-Spray's propellers hurl a cross-fire of detergent solution — with "tornado" force — against the tank's entire, stainless steel interior for thorough cleaning that's necessary for high-quality milk. Official records show bacteria averages have been greatly reduced. Standard capacities, 100 through 6000 gallons. Has dust-tight, insect-tight lids. And many more advantages.

Used Tanks & Milking Equipment

Ralph Waldo Emerson

Windmills considered for electricity

WASHINGTON, D.C. — Can the winds that sweep across the Midwest be harnessed to produce electricity? South Dakota Sen. Jim Abourezk thinks they can, and announced he is laying the groundwork for a formal study of the idea.

Abourezk said his concept is being developed into a formal proposal by the S.D. School of Mines and Technology, Rapid City, and the engineering firm of R. W. Beck & Associates, Denver. He said he is seeking funds for the proposal from the Energy Research and Development administration (ERDA).

"I think most people agree that every effort must be made to develop alternative sources of energy – sources that do not contaminate our environment.

"Wind is a form of solar energy and is something we have plenty of in the Midwest. It doesn't have to be shipped in or pumped out of the ground. And harnessing the wind does not cause air or water pollution," Abourezk said.

Abourezk said the Upper Missouri Basin region is in a unique position to take advantage of wind power.

"We already have a federal hydroelectric and transmission system," he said. "It seems practical that wind power could be integrated with the existing system to meet part of the electrical demand of the region."

The South Dakota Senator said the study would include:

An evaluation of the winds of the region to determine the best locations for single generators or "wind power farms" – a series of windmills to generate electricity. One site known for its powerful winds is Elk Mountain, near Laramie, Wyoming.

A study of how best to integrate power generated by wind with the federal hydroelectric and transmission system. Wind, like solar power, is not a constant, 24-hour-a-day source of energy. But because of the vast system of hydroelectric dams and transmission lines, wind - generated electricity can be utilized when available, coming back in those times power produced by the dams or coal plants. In such an integrated system, the windmills could increase the maximum amount of electricity available from the system.

A study of the economics of adding wind power generators to see if the new power source could be competitive with conventional sources of electric power.

"Anyone who has lived in our region of the country knows that we have a great amount of wind. That fact, coupled with the fact that the region has a 7,000 - mile federal transmission system with 140 substations where wind power could be added into the system, prompted me to suggest this study," Abourezk said.

He noted that "no other region of the country has both of these advantages."

Abourezk said ERDA has begun researching wind generators of 1,000 kilowatts up to 2,500 kilowatts.

"While generators of this size are small in the industry today, a series of them could well have the potential to provide a part of our future electrical requirements," he said.

Abourezk said he suggested the proposal to R. W. Beck & Associates because the firm conducted the research preliminary to integrating power from the large lignite generating plants into the Missouri River federal electric system.

"I'm very pleased that one of South Dakota's colleges is involved with this project," Abourezk said. "The School of Mines has a special capability for doing research on the winds of the regions because of its department of atmospheric sciences."

Abourezk said benefits of wind power research by ERDA would have little meaning unless it is directed toward the federal transmission system and electric utilities.

According to Abourezk, the study - if funding can be arranged - would be conducted in cooperation with the U.S. Bureau of Reclamation, the agency that markets power from the Missouri River dams, and the Missouri Basin Systems Group, a power pool of 120 consumer - owned electric systems in the region.

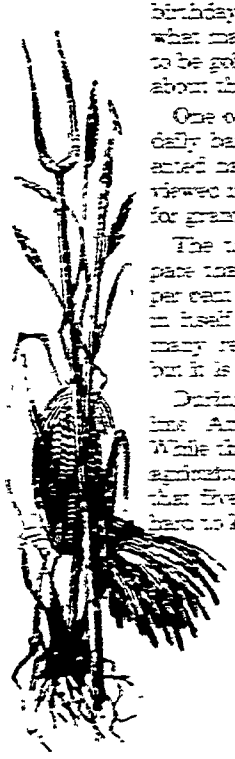
"The feasibility of rural electric cooperatives and municipal electric systems utilizing wind generators would be part of the proposed study," he said.

Abourezk cautioned that wind power is not a "cure-all" to short-range electricity shortages.

"There's a lot of research that must be done before this concept could be developed, and engineers have lots of work to do to develop the wind-powered generators," Abourezk said. "But I hope these initial studies can be made and that momentum can be built behind alternative energy sources."

Abourezk has also introduced legislation to promote the development of solar energy and to help homeowners utilize solar heating and cooling.

Farm Heritage Traced In Bicentennial Series



As the United States approaches the beginning of its 200th birthday year, many words will be written and spoken about what made America great. And at a time when all does not seem to be going as well as many would like it, mention will be made about things that could be better.

One of the facets of American life that must be faced on a daily basis is the necessary habit of eating. For an urban-oriented nation, which is what America now is, food is generally viewed in terms of dollars. When its costs are low, food is taken for granted. When its costs rise, food is named expensive.

The truth is that American agriculture has developed at a pace that makes it the envy of the world. Today, less than five per cent of the nation's population is engaged in farming. This in itself is truly remarkable, and has come about because of many reasons. Telling agricultural development is not easy, but it is interesting.

During the coming months, a series of interesting glimpses into America's agricultural development will be published. While these articles are not intended to be a complete history of agriculture, they will give readers an insight into the heritage of that five per cent of the national population which is working hard to keep America the best fed country in the world.

Mulch-lime fertilizer effective on spoil banks

Using straw mulch and lime and fertilizer, acid mine spoil banks can be converted to successfully grow trees, grasses, and legume plants, says Dr. Russell J. Hutnik, professor of forest ecology at The Pennsylvania State University.

Dr. Hutnik noted that ugly piles of mine processing wastes lie within or near many urban areas of northeastern Pennsylvania, polluting the water and air and posing a threat to the health and well-being of the residents. These mine spoils affect the economy as well as the environment, he affirmed.

Mulching with straw and adding lime and fertilizer will result in faster growing, more vigorous seedlings, Dr. Hutnik stated from seven years of experiments to reclaim strip mine wastelands. He said that past attempts at reclaiming spoil banks have met with varying degrees of success.

Costs and benefits of improving a site, he pointed out, should obviously determine the combination of plant species and treatment to be used.

Former graduate student Michael Kusko, Jr., a native of Nesquehoning, carried out the most recent study on two common anthracite processing wastes — breaker refuse and sludge. The straw mulch prevented occurrence of harmful high and low temperatures on both breaker refuse and sludge.

The breaker refuse was mostly large rock fragments. Sludge, although smaller, was too coarse textured for good plant growth from the standpoint of holding water and nutrients.

In an initial experiment, red pine and Norway spruce seedling trees were planted on both refuse materials. The plantings were compared with and without a lime plus fertilizer application and with or without a mulch of either straw, wood chips, plastic-coated kraft paper, or whitewash.

Red pine showed excellent survival on all plots and on both refuse materials. On the breaker refuse, red pine height growth was significantly better on the lime plus fertilizer plots and on the plots mulched with straw or wood chips. On the sludge, there was no significant response in height growth to any of the treatments.

On the breaker refuse, Norway spruce had significantly better survival on plots mulched with either straw or wood chips, and significantly better height growth on the lime plus fertilizer plots and on all mulched plots. On the sludge bank, all Norway spruce seedlings died during the first winter due to frost heaving and winter burn.

In a second and similar experiment, Norway spruce was replaced by European white birch and the wood chip and paper mulch treatments were eliminated. However, K-31 tall fescue and Empire birdsfoot trefoil were seeded on half of the plots.

Both red pine and white birch showed excellent survival on all plots and on both refuse materials. Only the combination of lime plus fertilizer and straw mulch produced any appreciable cover of tall fescue and birdsfoot trefoil. Whitewashed plots were no better than untreated areas.

Red pine height growth on both refuse materials was significantly better only on the straw mulched plots. White birch showed significant growth response to lime and fertilizer and straw mulch on both refuse materials.

Killing Frost

With some areas of the state already reporting frost during the past week, we would like to remind producers of the danger of using such crops as sudan grass, sorghum or the sudan-sorghum hybrids after a killing frost. There is danger of the formation of prussic acid in these frozen crops. After a killing frost the forage should be allowed to dry for at least seven days before being used. Also, it may be put into the silo immediately after frost, permitted to ferment for at least 30 days, and then be safe to use. Do not use it in a fresh condition after a killing frost. Other crops such as corn, clover, or alfalfa are not made toxic because of a killing frost. Contact your local veterinarian or our Extension Office for additional details.

xxx

Last year UNICEF shipped more than 39 million pounds of high-protein CSM (corn-soya-milk mixture) and WSB (a wheat and soy blend) to feed starving children in eight drought-stricken African countries and for distribution through health centers in eight other developing countries where severe malnutrition threatens the lives of infants and pre-schoolers.

Nothing increases man's regard for the truth like getting caught.

Ron Zimmerman (left) and Don Landis display the trophy won by Ephrata at the Lancaster County FFA judging contest. The youths were chosen as first place livestock judge and second place individual respectively.

Wins contest in Ohio

[Continued from Page 1]

In the county competition, Solanco placed second with Penn Manor taking third and New Holland capturing fourth.

Don Landis and Kerry Boyd, both representing Ephrata High School placed second and third respectively in individual scores.

Ron Clark, Solanco High School, was the top dairy judge followed closely with a schoolmate, Bruce Kreider taking second. Don Landis, Ephrata placed third.

In the livestock competition, Ron Zimmerman, Ephrata was first followed by fellow FFA'ers John Weiler and Curtis Martin also from the Cloister Chapter.

Homemakers attend first Capital Region Conference

Homemakers from eight counties in southeastern and central Pa. gathered at the Hershey Convention Center on Thursday, Oct. 9, for the first regional homemaker's conference.

Some 1100 ladies from Franklin to Lancaster Counties were present for the event which offered the noted team of Dr. William Masters and Virginia Johnson as keynote speakers. Well known for their study on human sexuality, the co-directors of the Biology Research Center in St. Louis, spoke to the women's group during the morning session of the program.

A fashion show centering on the bicentennial theme was presented during the noon luncheon Homemakers from various counties represented, modeled newly constructed outfits depicting the early colonial period, while some original fashions, dating back to the early 19th century were also shown

Group workshops, following the theme of women in a contemporary society and her health, constituted the afternoon program Health officials from the Hershey Medical Center and private physicians of the area were on hand to conduct the discussions.

The program was the first of its type to be held on a regional basis Members of the cooperative extension service from the Capital Region counties and from Penn State combined efforts to coordinate and arrange the program

How Many Pans Do You Need?

If selecting new cookware, look for pans of good quality which will last for many years of constant use. It's probably more satisfactory to select individual pans than a whole set Extension home management specialists at The Pennsylvania State University say cookware needs depend on family size and cooking habits. Most beginning cooks and small-family homemakers find that a large, medium, and several small saucepans, a large and small frypan and a Dutch oven are adequate. Other sizes and styles can be added as needed and permitted by storage space.

Ladies events planned for NEPPCO

HERSHEY, PA. - A unique educational and social program awaits the ladies who will be attending the 44th anniversary Exposition of the Northeastern Poultry Producers Council to be held here Oct. 21-23.

On Tuesday, Oct. 21, they will join the men for the opening luncheon featuring a dramatic, illustrated keynote address by Dr. Robert Spitzer of the U.S. Department of State. Afterward, they will have an opportunity to visit special attractions in the area on do-it-yourself tours. Kits of information will be provided for this purpose. Returning to the Hershey Convention Center, they will be guests of NEPPCO at a President's Reception staged in the Exhibit Hall.

On Wednesday morning, several young participants in the NEPPCO Youth Program will visit the Ladies Hospitality Center to demonstrate their skills in poultry food preparation. Afterward, the ladies will journey to the Groff Farm near Mount Joy in Lancaster County, where the mid-day meal will be prepared and served family style. Betty Groff, author of the recently-published "Good Earth Country Cookbook", will be the hostess as well as the guest speaker. Also attending will be Anne Nesbitt, director of the National Chicken Cooking Contest.

Thursday will begin with an event in the Ladies Hospitality Center at 10:30 a.m. hosted by Dona Kuipers of New Holland. She is the artist and author of an impressive 11 x 16-inch coloring book entitled, "The Chicken and the Incrediable Edible Egg". Copies of the newly-published book will be given to the ladies and its theme and implications discussed.

Throughout the three-day NEPPCO Convention, they will be welcomed on the exhibit floor at the Convention Center, featuring today's and tommorrow's poultry equipment and products, as well as at the market egg show and educational sessions.

On Thursday evening, the ladies will again join their men for the big annual banquet and floor show that climaxes this year's NEPPCO Convention.

Copies of the complete Convention Program and registration forms are available from NEPPCO, 322 Oxford Valley Road, Fairless Hills, Pa. 19030, telephone 215-547-0190. Room reservations should be made directly with the Hershey Motor Lodge.

Corn and Wheat Were Bulwarks Of the Growth of Agriculture

No two farm crops are likely more representative of the amazing historical advancements of U.S agriculture than corn and wheat.

When the very survival of the Pilgrims was at stake, maize or corn was chief among the many plants the Indians introduced to the Colonists

Although wheat was not native to the New Land, it became a major crop for domestic food and export by 1640

The Pennsylvania German farmers of the area west from Philadelphia to the Susquehanna River tilled the rich land known as the "Colonial Breadbasket," which fueled many of the military campaigns of the Revolution

Corn and wheat growing largely remained a manual task for many years to come By 1825, some 60 man-hours were needed to produce an acre of wheat, using a walking plow, bundle of brush for harrow, hand broadcast of seed, harvesting by sickle and threshing by flail

Mechanical improvements were soon to come In three short years, 1833 to 1837, the steel plow, mechanical reaper and threshing machine had made their appearance

But still to be learned was the value of good farming practices

Top wheat fields in New York State yielded more than 30 bushels an acre after the Revolution But within a half century, average yields would be down to 8 bushels

One Ohio farmer commented "Among anti-book farmers, it's corn, corn, corn for 40 years and then move West Among the progressives, it's clover two years, potatoes, corn, wheat, clover "

The agricultural push west had begun In 1840, Pennsylvania was still the top wheat state Within 20 years, the wheat-growing center shifted to Ohio, Indiana, Michigan, Illinois and Wisconsin

Labor requirements to produce the crops were dropping Some 35 man hours were still needed to produce an acre of corn By 1930, only 3 man-hours were needed for an acre of wheat and 6 for an acre of corn

Spurred by the Civil War and a tremendous demand for food, the commercial Corn and Wheat Belts began to take shape

The combine made its appearance and had only a short life in Michigan before the war Later it was transplanted to the Pacific wheat fields, powered by as many as 40 horses, and was in factory production in California by 1880

It wasn't until the late 1930's that the self-propelled combine of today made its appearance And it was just in time to fill the food needs of another war

Numerous improvements have since been made to the combine, but what about the future of this miracle machine

Researchers at Sperry New Holland, a leading farm machinery manufacturer, see future development following two different paths

First, efforts at improving their harvesting efficiency will provide less field loss and less kernel damage

Second, electronic guidance of combines through fields will reduce harvesting time and fuel consumption and permit the operator to devote more attention to other monitored functions of the combine

Therefore, corn, wheat and other crops harvested by a combine will continue to play a major role in the future of U S agriculture, just as they have done throughout its rich historical past

Agway Petroleum gives you 3 ways to worry less about winter

Expert service—day or night, routine or emergency
When you have a heating problem, we send a trained, well-equipped technician to check it out. Our service people have the know-how and supplies to perform tune-ups, repairs, or modernizations at costs you can afford. And our optional Full-Security Plan includes six important heating services.

The Agway Budget Plan—to help keep your budget balanced
At your option, we'll divide your annual heating bill into equal monthly payments. You pay the same amount each month instead of getting wallet-breaking surprises during the winter season.

Dependable, automatic delivery—and 50 free gallons if we slip up
If you're an Agway Certified Delivery Service customer who heats only with Agway oil, you never have to worry about phoning for a fill-up. Our degree-day system allows us to keep track of your usage and predict just when you'll be running low. And if we let your tank run dry during the heating season (September 1 thru April 30), we'll deliver your next 50 gallons for free, just to make up.

If you're thinking about switching to oil heat, or if you're unhappy with the oil service you're now getting call Agway Petroleum.

We're bringing down the cost of winter.

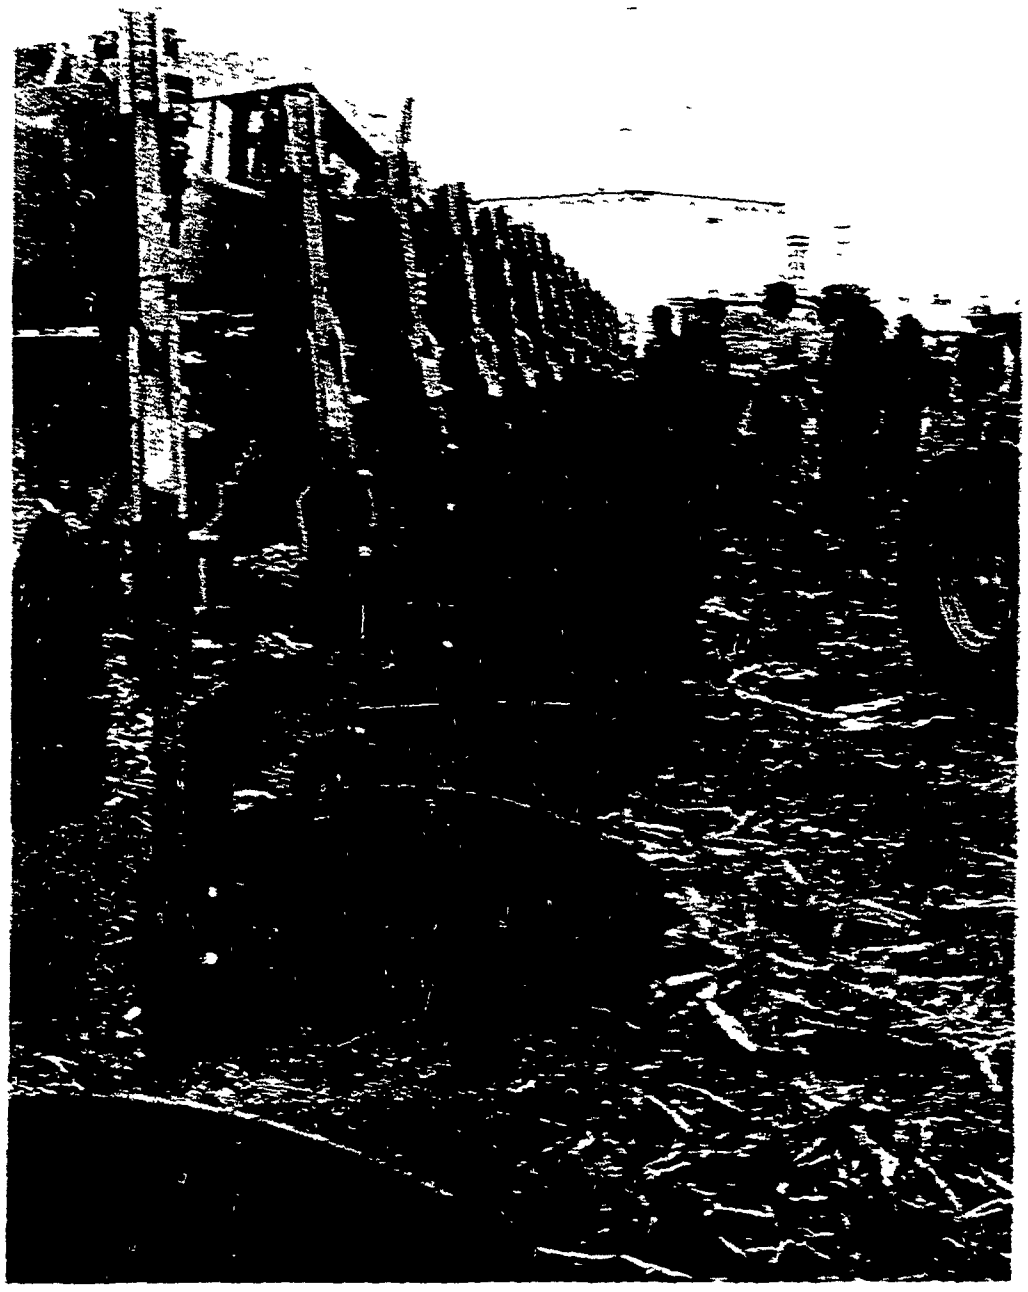
Last week's page one picture was an enlargement of what's seen in the center of this picture. Some disks at the Farm Progress Show - held this year at Malta, Illinois, were close to 40 feet wide.



Here's another shot of that 14-bottom plow which attracted so much attention at the 23rd annual Farm Progress Show last week. Each bottom took a cut of 18 inches.

Mechanized Farming Advances Were Not Overnight Successes

Very often milestones in the development of mechanized farming equipment, which caused revolutionary changes throughout the history of U.S. agriculture, were far from overnight successes.

Among the many major developments introduced to the American farming scene in the early 1800's was the reaper.

While many attempts were made earlier at building mechanical grain cutters, it wasn't until the early 19th century that progress was noted in the U.S.

Then, on a hot July day in 1831, Cyrus McCormick successfully field tested his crude, cumbersome reaper. He had continued developmental work started by his father some two decades before.

The McCormick reaper was first tried on the family farm in Rockbridge County, Va. The horse-drawn reaper with cutters powered by its own wheels cut six acres of oats.

McCormick advertised his reaper for sale at $50 but found no takers. The first unit wasn't sold until nine years later in 1840.

Two years later, business improved somewhat and he sold seven at $120 each.

Slow acceptance of the new machine along the East Coast prompted him to move to Chicago in 1847. Grain farmers of the Middle West were more receptive to the reaper and production increased into the thousands annually. By the Civil War, some 40,000 were being marketed to meet the great demands for food.

From this slow beginning, developments progressed until grain harvesting evolved into the modern mechanized marvel of today. Two ensuing improvements that were major factors in reaching this highly mechanized plateau were the development of the combine incorporating the threshing of grain with its cutting and self-propulsion brought about by the internal combustion engine.

From a small field of oats in 1831 to the capacity to harvest enough wheat in an hour to make 20,000 loaves of bread is a capsule history of the combine concept, according to Sperry New Holland, worldwide marketer of combines.

At its birth, the world of the reaper was just six acres in Virginia. Today, it moves through fields of a score of different crops around the world, including the annual harvests that cover nearly a continent from Mexico through the U.S. grain belts into Canada.

From a rudimentary basic position in farming's past, the combine — whose continuing development is moving into the era of space-age research at Sperry New Holland — will hold down an even more important place in the future of agriculture to feed a hungry world.

Dairy market sets records

(Continued from Page 1)

January when Butz boosted the price to $7.24. Last Thursday he again adjusted the support level to 80 percent parity, raising the level 47 cents to $7.71 a hundredweight.

"The new support level is below existing prices," Honan noted, "but the increased floor will lend badly needed stability to the market."

Following the increase in support levels was a jump in the November Order 4 Class I price of 57 cents over the October price. This brings the Class I price for area dairymen to $11.11, the highest price in history, and may go higher yet according to Inter-State economist Dr. Paul Hand.

The Class II price for September was announced at $8.41, an increase of $1.58 over levels a year ago, and another new record. A third new record comes in the butterfat differential - now 10.1 cents.

Honan forecasted the prices for the next three to six months to be "very good."

Honan explained the record prices result directly from a decline in national production, forced by recently depressed prices which discouraged farmers from all-out production. Tropical Storm Eloise also played a role in declining Order 4 production by possibly two percent, he noted. "Milk is relatively short, and demand for manufacturing milk is strong," he added.

As a result of the higher milk prices, Inter-State does not intend to continue charging over-order premiums on Class I milk, and Honan presumed that premiums weren't likely to be reinstated as long as the Class I price remains above $10.50 per hundredweight.

The Inter-State leader noted that there had been no reduction in Class I purchases by handlers. Explaining that negotiations for Class II premiums may continue, he described such tactics as "tedious" and that these decisions fall on the Board of Directors in the final analysis. "Last year," he added, "over $3 million in premiums was given back to members — or about $1,000 per producer." That amounts to a premium of 20 cents per hundredweight.

Honan said that a major concern of his cooperative is the "Yo-Yo effect" — which causes supply and production problems at both the producer and retail level. Some of the decisions made by USDA and the PMMB last week should help to alleviate some of these concerns, although it won't eliminate them.

Additional good news was told the dairymen noting that the Pennsylvania Milk Marketing Board (PMMB) finally wrote an order for Area 1 (the Philadelphia Marketing Area where most Lancaster County milk is marketed). The decision follows hearings which began three years ago and were completed only as a result of Inter-State taking action through courts. Ending in May, the hearing is the longest on record.

The decision results in the first revision of on-farm prices for this area in five years. The new Order now provides for Class I and Class II prices to be determined by Federal Order prices. This, Honan described as a "major victory for the dairy farmer".

Another unprecedented decision by the Board establishes "bracketing" to determine retail level prices. A built-in table now allows retail prices to fluctuate directly with on-farm prices — similar to the system used in New Jersey.

Speaking briefly on the controversy surrounding the expansion of Federal Order 4, Honan said a court hearing is scheduled for Oct. 15 to determine what's to be done about those dairies which have refused to pay their dues to the pool. "I feel that dealers are still trying to make decisions for the farmer," Honan remarked.

One happy note about the expansion came when Honan pulled out a letter received by Inter-State from Greene Dairy of York. He explained that the York dairy and Inter-State had signed a sales agreement and the letter cited favorable results. While pleased with the response, Honan acknowledged that there was considerable dissatisfaction among other dairies which were put into Order 4 as a result of the expansion.

Switching the topic of his talk to marketing conditions in Federal Order 2, Honan said: "We are underneath a great volume of milk in New York, and there's a whole host of misunderstandings involved in milk marketing."

He told the dairymen that Dairylea and NEDCO have petitioned the U.S. Department of Agriculture for a hearing to protect Order 2 Class I markets being lost to Order 4 milk. Order 2 producers claim they are receiving 10 cents a hundredweight less in blend prices as a result of Class I sales lost to Order 4.

"It's our view that responsible leadership must recognize that when the nation's major milk manufacturing area (the Midwest) pays a plant-delivered price for the milk used for butter, powder, and cheese, that New York cooperatives cannot afford to pay hauling to these plants," he continued. "This is one of the big problems causing financial insecurity and giving rise to surplus handling concerns in this section of the country."

He said it appeared a couple months ago that the three dairy co-ops in New York were going to agree on a pricing system that would solve their problems, "but only recently I noticed Eastern Milk Producers has come out in support of f.o.b. farm point pricing with free hauling to farmers."

"It's our experience in the Philadelphia market that this cannot result in anything but more economic problems for New York dairy farmers if this continues," he said.

In explaining Inter-State's marketing procedures, Honan said his cooperative balances supplies — that is about 60 per cent of shipments go to the same plant, while the other 40 per cent is designated as "swing milk" and goes to wherever it's needed. He added that Inter-State is currently buying three truckloads of milk from Maryland Cooperative Milk Producers (MCMP) with which it is affiliated through the Pennmarva Federation.

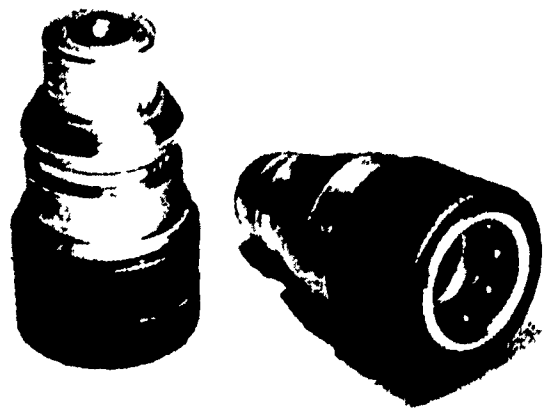
The Pennmarva Federation, which originally consisted of Inter-State, MCMP, and Maryland-Virginia Cooperative Milk Producers, has taken on two new members - Lehigh Valley and Capitol Milk Producers. With these additions, it could mean that the federation's by-laws will be changed to avoid situations where one co-op may attempt to market milk of the other. Honan stressed the federation is a trade association and it is not interested in merging to become one marketing organization.

Another topic of discussion at the Monday night meeting, which was held at the Stock Yards Inn, was quality control. The Board of Directors at Inter-State is taking a close look at product liability — water and antibiotics in milk, to be specific. Handlers will often not pay for milk which has been adulterated. Admitting that liability is a "good question and something we can't run away from," Honan says the only way cooperatives can begin to control it is by imposing penalties to producers who violate the code.

Noting that Inter-State just recently completed its fiscal year, he said it proved one of the most efficient years in the co-op's history. Inter-State, he said, operated on only 3.3 cents of the 8 cents per hundredweight commission paid by members. This, he said, will result in 4.7 cents of the 8 cent commission being returned in the form of patronage refunds.

Concluding his remarks, Honan pointed out that Inter-State's policy of obtaining cost-of-production adjustments resulted last year in an average of $1,000 in additional income for Inter-State members. Last year, he said, Inter-State marketed 1.6 billion pounds of milk for its members for an estimated value of $146 million. He predicted next year's budget to be as good as this one just completed.

What's New . . .



COUPLER ADAPTERS

Color-coded coupler adapters for connecting John Deere and International Harvester female coupler halves to standard ½" male tips are now available from the Bruning Company, Lincoln, Nebraska, subsidiary of ITE Imperial Corporation.

The John Deere adapter (Part No. DA-400) has a green collar for identification while the IHC adapter (Part No. HA-400) has a red collar.

These Bruning adapters permit instant connection under pressure enabling John Deere and IHC couplers to mate with nearly any ½" male tip on the market. No tools are required for installing the adapter. Just plug in like a standard coupler.

The new adapters accept Bruning ball-type tip (D-402), poppet-type (S-502) plus Pioneer, Safeway, J. I. Case A.S.A.E., Ford, Massey Ferguson, White, Oliver, Minneapolis Moline and many others.

Bruning, a subsidiary of ITE Imperial Corporation, designs, manufactures and markets a complete line of quick disconnect couplers, hydraulic cylinders, filtered pressure-vacuum relief valves and in-line check-relief valves.

For additional information, write or call Bruning Company, Box 81247, Lincoln, Nebraska 68501. Phone 402-489-6536.

A. C. Brochure

MILWAUKEE, WIS. — A brochure describing the new 40 hp Model 5040 farm tractor recently introduced by the Allis-Chalmers Corp. Agricultural Equipment Divisions is now available.

The literature describes the Model 5040 as a tractor featuring a three cylinder, 142.8 cu. in., direct injection diesel engine. The tractor is equipped with a dual range six or triple range nine speed transmission with several gears fully synchronized for easy shifting on the go. It also lists standard features such as power steering and thermostart, which would be optional items on other tractors.

For a copy of the Model 5040 literature, No. AED 426-7506, contact the Allis-Chalmers Corp., Agricultural Equipment Divisions, Box 512, Milwaukee, Wis. 53201.

Manheim Fair celebrates 22nd year

The 22nd edition of the Manheim Farm Show opened to the public on Wednesday, Oct. 8 and was greeted with a record attendance and ideal weather.

Opening events at the fair included the FFA and 4-H Hog show which was followed by the annual baby beef show. Richard Strauss, an FFA'er from Ephrata exhibited the grand champion market hog during the event.

Strauss's hog had previously won the champion medium weight class.

The brother and sister team of Linda and Tim Good, Lititz R2, captured the grand and reserve champion honors with their crossbred steers in that event.

Linda had earlier received the grand champion placing in her crossbred 4-H class and went on to capture the grand champion 4-H steer. The young lady was in competition with her two brothers Tom and Tim who placed third and fourth in the 4-H contest.

Tim, also an FFA member from Manheim High School, received first place in his crossbred FFA class and was later announced as the grand champion winner in the FFA division.

Linda, 18 and Tim, 16, are the children of Mr. and Mrs. Paul Good, Lititz R2. Paul Good has been a leader of the area baby beef club and was chairman of this year's beef show at the fair.

Results of the hog and beef show are as follows:

Hog Show

Junior Sow - Tim Grube; Senior Sow - Rick Pfautz; grand champion sow - Rick Pfautz.

Lightweight market hog class 1 - Lloyd Hoover; 2nd class - Kerry Boyd; champion lightweight - Lloyd Hoover.

Mediumweight market hog class 1 - Kerry Boyd; 2nd class - Ron Zimmerman; 3rd class - Earl Geib; 4th class - Cliff Charles; 5th class - Richard Strauss; champion medium hog - Richard Strauss.

Heavyweight market hog - 1st class - Becky Lefever; 2nd class - Steve Strauss; 3rd - Tim Grube; champion heavyweight - Becky Lefever.

Grand champion market hog - Richard Strauss and reserve Becky Lefever.

Lightweight pairs - Kerry Boyd.

Mediumweight pairs 1st class - Cliff Charles; 2nd class - Jim Sweigart, grand champion medium pairs - Cliff Charles.

Junior showmanship - Steve Strauss; 2nd - Allen Ackley; senior showmanship Rick Pfautz and Kerry Boyd.

Beef Show

FFA Angus - Bernard Nissley; Hereford - Mick Geltmacher; crossbred - Tim Good. Grand champion - Tim Good; reserve - Kevin Rohrer. 4-H Angus - Ken Brubaker; Hereford - Deb Kreider and crossbred - Linda Good. Grand champion - Linda Good and reserve - Ken Brubaker.

Grand champion overall - Linda Good and reserve - Tim Good.

Showmanship - Senior - Ken Brubaker and Debra Kreider; junior - Barry Geib and Dora Jo Geib.

Dairy Show

Jerseys

Ken Finley, New Providence, and Lonny Horst, Bowmansville, shared all of the top honors in Jersey competition, but not exactly in equal proportions. Finley took 11 first places, including the champion of the breed, while Horst showed two first-place animals.

Ayrshires

Dennis Martin, Stevens, was the "premier exhibitor" in this breed show, with seven first-place ribbons. Doreen Martin, Stevens, showed the first-place senior yearling; Ken Finley - intermediate calf; and Tresa Kupp, Manheim, senior calf.

Brown Swiss

The grand champion and reserve grand champion of the show were senior yearlings exhibited by Steve Hershey, Manheim, and Kerry Boyd, Ephrata, respectively.

Holsteins

Jr. Calf

1. Arlan Keener, Elizabethtown; 2. Paul Horning, Stevens; 3. Elam Bollinger, Manheim; 4. Cliff Martin, Stevens.

Int. Calf

1. Steve Kauffman, Elizabethtown; 2. Russell Kline, Denver; 3. Paul Horning, 4. Linda Kauffman, Elizabethtown; 5. Cliff Martin, 6. Lowell Brubaker, Manheim.

Senior Calf

1. Phil Crouse, Stevens; 2. Daryl Wenger, Manheim; 3. Dale Balmer, Manheim.

Jr. Yearling

1. Russell Kline, 2. Cliff Martin, 3. Dennis Kulp.

Sr. Yearling

1. Paul Horning, 2. Darwin Rodgers, Marietta; 3. Steve Hershey, Manheim.

Jr. Champion

Paul Horning, with a daughter of Penn Octo Kenny.

Richard Strauss, Ephrata R1, exhibited the grand champion market hog during the Manheim Fair. Richard's parents, Mr. and Mrs. Robert Strauss (right) smile as their son was announced as the winner.

Two Year Olds

1. Linda Kauffman, 2. Phil Crouse, 3. Russ Kline, 4. Dennis Kulp, 5. Steve Kauffman, 6. Paul Horning.

Three Year Olds

1. Paul Horning, 2. Russ Kline.

Four Year Olds

1. Robert Kauffman, 2. Lowell Brubaker, Manheim; 3. Russell Adamire, Jr., Mount Joy; 4. Paul Horning.

Aged Cow

1. Russell Kline, 2. Robert Kauffman, 3. Linda Kauffman, 4. Russell Kline.

Sr. Champion

Russell Kline with "Fought Lands Eagle Ingra."

Reserve Sr. Champion

Robert Kauffman.

Grand Champion

Russell Kline with "Ingra."

Reserve Grand Champion

Robert Kauffman.

Jr. Get of Sire

1. Steve Hershey.

Sr. Get of Sire

1. Paul Horning.

Best Three Females

1. Linda Kauffman.

Dairy Herd

1. Linda Kauffman, 2. Paul Horning.

Produce of Dam

1. Daryl Bollinger.

Dam-Daughter Pair

1. Russell Kline, 2. Paul Horning, 3. Larry Hershey, 4. Linda Kauffman.

Champion Bull

Steve Hershey.

Manheim Fair Sheep

Barbara, Elizabeth, and Chris Herr, children of Mr. and Mrs. Robert Herr, Narvon, dominated the sheep show at the Manheim Fair last night. The trio won more than 20 ribbons, continuing the winning tradition of the family.

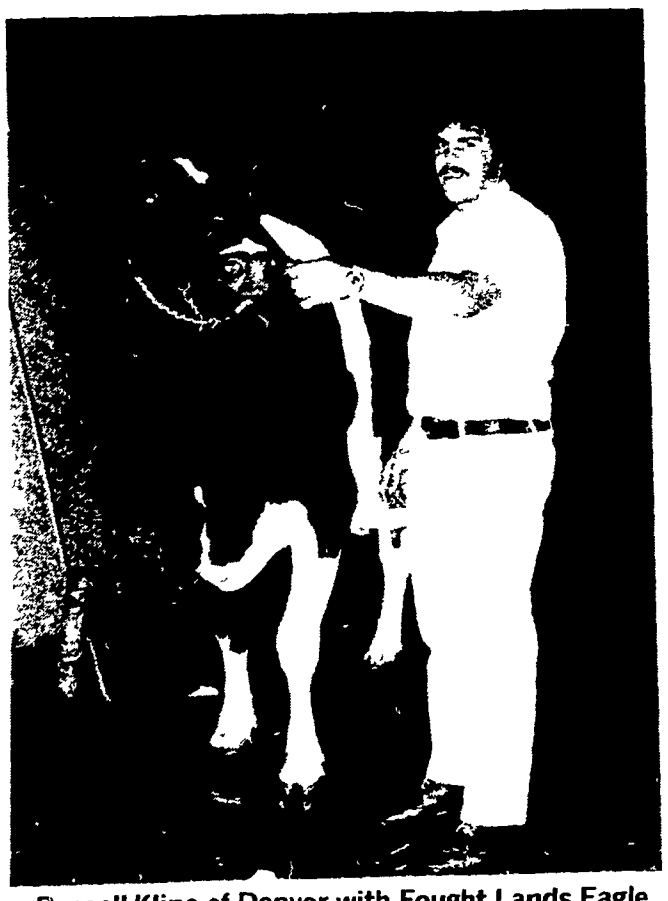
Barbara Herr repeated her winning efforts from the Ephrata Fair by exhibiting the grand champion lamb.

The 12-year old member of the Red Rose Baby Beef and Lamb Club took nine ribbons home with her to add to her growing collection. She exhibited animals in the Hampshire and Dorset breeds.

Among her winnings were: first-place heavyweight Hampshire market lamb (the grand champion),

(Continued on Page 28)

The brother and sister team of Linda and Tim Good captured the beef show at the Manheim Fair. Linda, 18, exhibited the grand champion 4-H steer and grand champion overall steer. Tim, 16, had the grand champion FFA steer and the reserve champion overall animal. The youths are the children of Mr. and Mrs. Paul Good, Lititz R2.

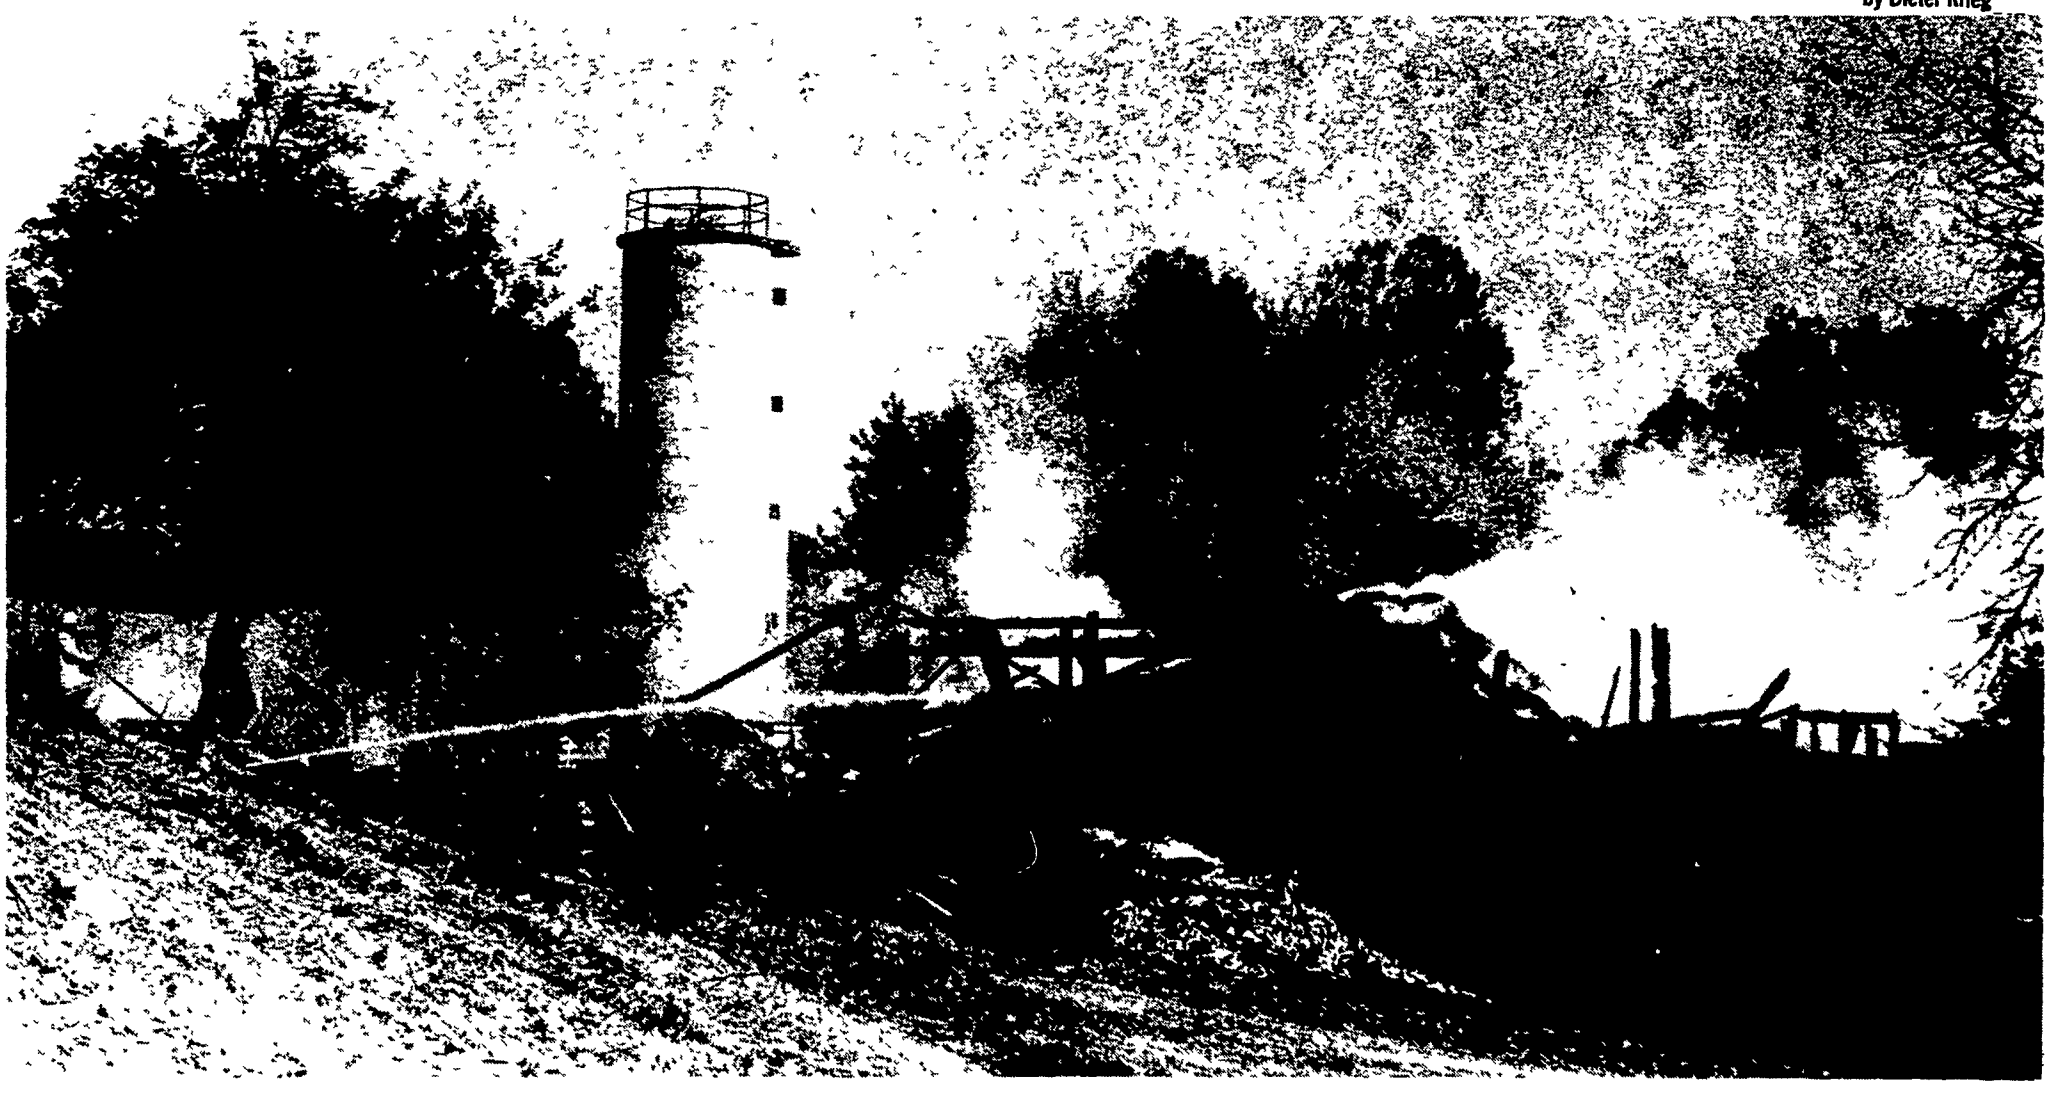


Russell Kline of Denver with Fought Lands Eagle Ingra. The pair has been winning consistently in fairs and shows this year, with the latest awards coming from the Manheim Fair.

Elizabeth, Barbara, and Chris Herr display some of their prize-winning animals at the Manheim Fair. The trio captured most of the first places — as they have done at several other fairs in the area during the last few years. They are the children of Mr. and Mrs. Robert Herr, Narvon.

Top photo shows the barn fire at the Joseph Boll farm approximately 20 minutes after it started. Lower photo shows the same barn, which measured 120 by 45 feet, about two hours later. Volunteers from six fire companies rushed to the scene and were able to save the lower portion of the barn, including the milking parlor. The Bolls were able to milk that same night, after an electrician had installed temporary wiring.

Lancaster Farming Photo
by Dieter Krieg



Fire destroys Joseph Boll barn

[Continued from Page 1]

The blaze touched off what is known among fire officials as a "zone alarm." Six companies (Penryn, Lititz, Manheim, Brickerville, Brunnerville, and Rothsville) rushed to the scene, and four others were alerted to be on standby.

The younger Boll explained that he had been heating some vegetable oil with an electric heater, and supposed that it might have sparked the explosion. The vegetable oil is an ingredient for a feed mix he makes on the farm.

"I have been doing it for years," he said sadly, still bewildered as to how and why the disaster struck. The amount of oil which was being heated was in a five-gallon can and a 55-gallon drum stood just a few feet away.

Boll believes the fire started with the heater and oil and then went to the bin wagon, which was loaded with shelled corn. It was at that point that he and his son walked into the barn and began pulling out equipment. The family was able to save most of the machinery which had been stored in the 120 by 45 foot structure.

With fire trucks and personnel arriving one after another once the zone alarm was sounded, the area around the barn was buzzing with activity and lined with more than a dozen hoses. A small pond behind the barn provided water at the rate of 2,000 gallons per minute for the more than two hours that firemen spent fighting the blaze. The fire was under control by about 1:15, but adjacent structures, including the Richard Boll home, were still of concern. By 2 p.m. firemen and neighbors had already begun clean-up activities in spite of isolated areas of burning debris.

Attempting to assess the damage, Boll was unable to come up with a figure in terms of dollars. His main concern was being able to milk his herd of 44 Holsteins. Early reports indicated he would be able to do so. The milking parlor and the lower level of the barn, which contains free-stalls, were untouched by flames. But there was considerable damage from smoke and water, and the electrical wiring will need to be replaced.

Speaking with Lancaster Farming on Friday morning, Richard Boll confirmed that he was indeed able to use the livestock area of the barn and that he was even able to milk that same night.

"We ran a lot of temporary wiring — the electrician went to work while things above were still smoldering," Boll remarked over the phone. "We started milking at around 8:00 or 8:30."

The Lancaster County farmer expressed a lot of gratitude for his good neighbors during the conservation, adding that between 80 and 90 people came on Thursday afternoon for clean-up activities. "They came with manure spreaders, forks, and loaders," he said, "and hauled out the smoldering hay."

Women of the area got together to provide food and drink for the men, many of whom worked until past midnight. "We really appreciate the help," he said humbly.

The Bolls aren't sure yet just exactly what will be done to replace the old structure — but plans are being made. A contractor came to the farm Friday afternoon to survey the situation, and the Bolls themselves took a little time off to look around at other barns after which they might pattern their own.

Carl Miller, center, receives a congratulatory handshake from Howard Anderson, president of Penn-Jersey Harvestore, as vice-president Charles Enloe looks on.

The Miller's Mirl-Carl Farm is known as Blue Tower City to neighbors.

Penn-Jersey's area manager, Carl Johnson, left, chats with Mr. and Mrs. Carl Miller and their son Jeff. The Millers began purchasing Harvestores in May of 1972 and now have six, including the 1000th one sold by Penn-Jersey.

Blue Tower City - That's what the neighbors call Carl Miller's Farm located in Kutztown, Berks County, Pennsylvania. Since May of 1972 six HARVESTORES have "SPROUTED" on Mirl-Carl Farm.

One 25 x 80; three 20 x 80's and two 20 x 70's. It all started when the Millers joined Carl Johnson on a New Jersey Dairy Tour. Having unsuccessfully tried three different unloaders in their conventional silo with little success on haylage, they were looking for a better way to handle their alfalfa. Carl Miller had long recognized the value of protein rich alfalfa in his dairy program but was looking for an easier and more reliable method of handling it, and boy has he found it.

His 265 milk cows are fed four times daily, fifteen minutes each. His haylage and high moisture ear corn program has cut his feed bill in half. This year 300 bales of hay were made from 400 acres of alfalfa and he told us he had to bribe his help to get that much baling done. His HARVESTORE heifer feeding program is also unique since no grain is fed, only the haylage ration.

Penn-Jersey HARVESTORE congratulates the Millers on their purchase of the 1,000th HARVESTORE in our area knowing they will continue to enjoy the exciting changes and profitable benefits of HARVESTORE Farming.

U.S. wants int'l. grain reserve

Farmers wising up to speculators; suspicious of government

By Dieter Krieg

According to a story appearing in the Wall Street Journal this week, the United States is pushing for a plan to set up a 4.5 billion dollar international grain reserves system. Making the proposal in London to representatives of the International Wheat Council, U.S. representatives suggested that the cost of the program be shared by producing and consuming nations alike.

The idea was brought on by swings in world supplies of wheat which alternated between surplus and shortage in recent years. U.S. representatives believe that the proposal would be conducive to more regular supplies.

Wheat, corn, and rice are to be purchased in times of surplus and held in clusters of newly-built silos around the world. Then, when shortages occur, the commodities are to be released. The goal in all this is more stability in prices and supplies. The deals currently going on with the Soviet Union are also designed to bring more stability to the grain market.

In making the proposal, the United States received opposition from other member nations of the International Wheat Council. Previously it had been agreed that price levels are set to trigger purchases and sales but U.S. representatives don't want new price targets included in the new agreements.

The old grain trading arrangement expires on June 30, 1976 and the talks which took place in London are in preparation for a new plan to replace it.

According to the Wall Street Journal article, U.S. officials believe their proposed plan comes at a good time of acceptance because wheat is supposedly in short supply right now and both buyers and producers should have an interest in maintaining price and supply stability.

Officials at the grain conference noted that the U.S. proposal received consideration - but more for its possibilities rather than its desirability. The plan calls for the purchase of 917.5 million bushels of wheat and 245 million bushels of rice. A figure for corn was not made available.

While the controversial proposal received some consideration, the measure was not acted upon. Additional talks are scheduled between now and early December when the Council meets again. The U.S. hopes its proposal will be accepted as is in spite of the opposition it received.

Meanwhile, commodity futures continue to reflect the uncertain supply and price situation developing in both hemispheres. European and Russian crops are reportedly deteriorating, while bountiful harvests are piling up in bins here.

Opinions reflected in agricultural publications across the country would just as soon have Uncle Sam stay out of the market place. The question asked is "How can the government make commitments to other nations to have grain available for them this year or in years to come when it's farmers, not government, which is producing the grain?" Farmers own the grain and they want the decisions about selling it. They're suspicious that government deals will have some bad news for them - 1. Uncle Sam digging deeper into his pockets, and 2. limiting even further the alternatives he has in attempting to make a profit.

Following is a crop report grain when the market comes to them, rather than all of it when they go to market.

Trends in grain marketing

based on releases received by Lancaster Farming during the past week:

Soybeans

A large soybean crop, estimated at 1,458 million bushels, coupled with a big 186 million bushel carryover of old beans is expected to provide an abundant supply for domestic and export requirements. Domestic use this year was down 25 percent from the record-breaking years of 1973-74, but moderate recovery is expected in 1976. Foreign damand is expected to accelerate also.

Soybean meal may be attractively priced for poultry and dairy operators, but the beef and hog farmers are likely to shy away from large-scale feeding for a while yet, USDA predicts. With large supplies of soybeans, it appears that in 1975-76 protein feeds may again be priced cheaper relative to grain concentrates, they add.

Soybean production is up 17 per cent from last year, but seven per cent below the record crop registered in 1973. The carryover is the third largest on record.

Wheat

Believing they have missed out on top grain prices each year since Russia bought large amounts of U.S. wheat in 1972, American grain farmers are holding their crops this year until terms of U.S.-Soviet deals are definite. Farmers are discovering it is better to sell a part of their

Wheat farmers have sold less than half of the 1.6 billion bushels of wheat they harvested last summer. Grain farmers are wising up to speculators and price fluctuations. Dealers in the Midwest note that farmers come to the elevators to sell their crops when prices of around four dollars per bushel are posted, but they stay away when the price drops.

This novel marketing strategy on the part of farmers may be spreading to other commodities as well. Analysts point out that farmers are still holding 41 per cent of the soybean stocks, for example. It used to be that farmers would sell their crops early in the harvest when supplies were lowest, or late the next season when supplies were short again. But that's changing, as farmers hold and attempt to keep prices up by curtailing supplies.

All this came about, say grain specialists (other than the farmers themselves) because producers received the short end of the deal for three years by selling too soon. And last year they learned what can happen if they wait too long. So they're attempting to achieve a happy medium by avoiding pitfalls at both ends.

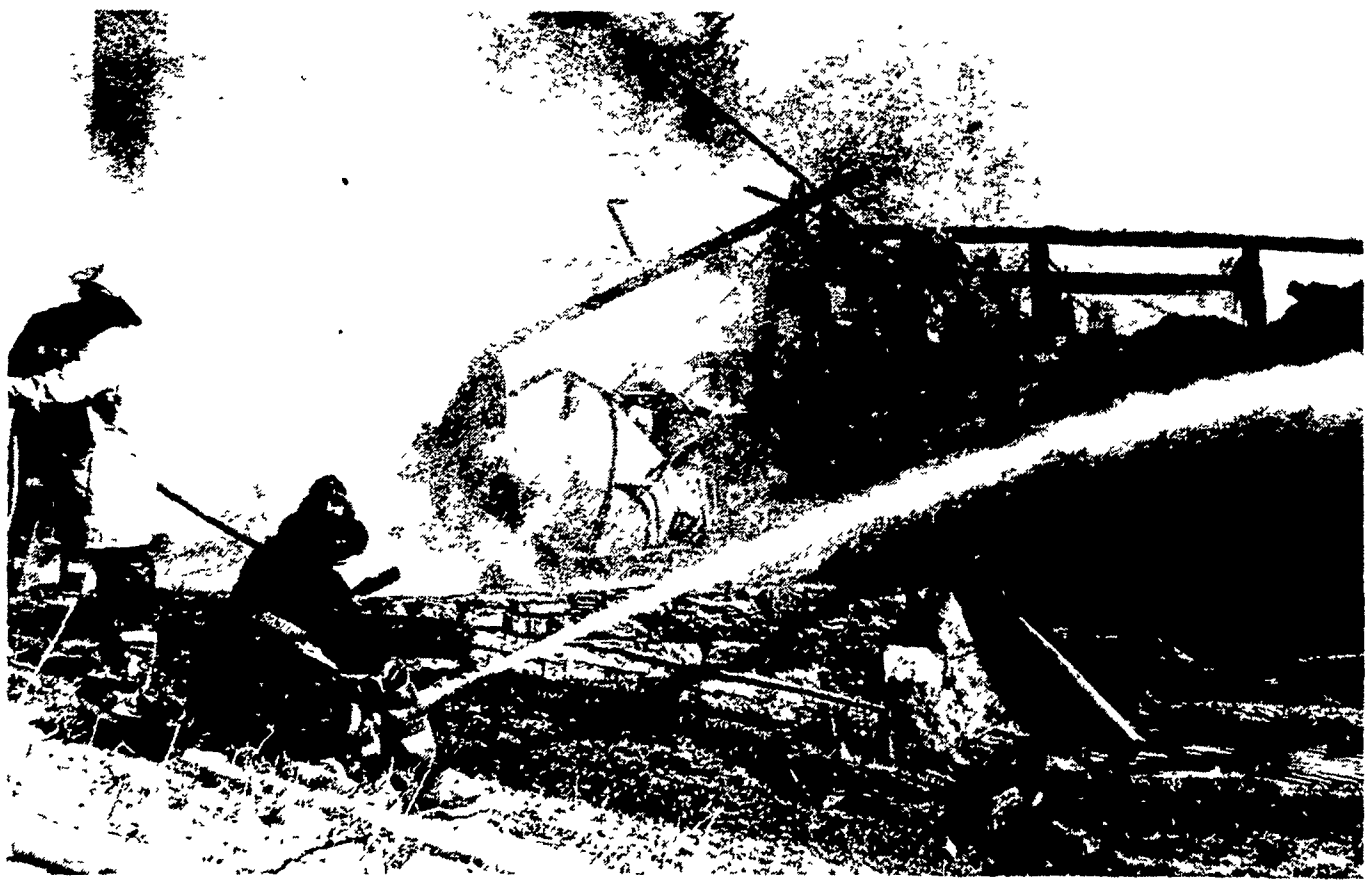
Observers say farmers learned well and they're watching the market like a hawk. Last week, while this reporter was in the Midwest to the Farm Progress Show at Malta, Illinois, several exhibitors at the show used the market tabulations as an added attraction. Up to the minute prices were projected on screens or posted on boards. Crop reports were blurted out over the several broadcast services which were on hand, and farmers listened.

Roderick Turnbull, a Kansas City Board of Trade official says: "After selling a part of his crop to catch up with production bills, each farmer watches the market like a hawk with his own target in mind. He'll change his mind about where the target is at, but he'll sell when the market hits it, and he'll close it off like water when the prices drop.

Quoting from the Wall Streel Journal, here's what one Kansas grain buyer had to say:

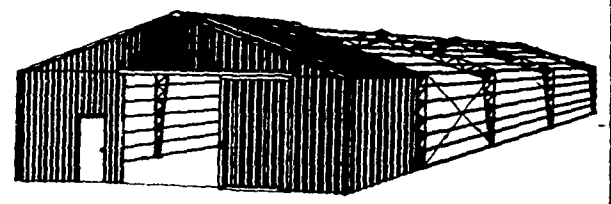
"Steady four dollar wheat would probably fill up my elevator, but if prices blow by that in a hurry, like maybe to $4.25, a farmer is going to sit on the whole pile for an even higher price until he figured out what happened. On the other hand, we've been down to $3.75 so often, he'd just sit there until it bounced back again."

The market should be an interesting one. The western hemisphere had bumper crops for the most part, while European and Asian production will necessitate bolstering from countries such as the U.S., Canada, Australia, and Argentina. The report from China is that good weather is likely to produce the third straight record grain crop this year, and thus reduce, but not eliminate, the need for imports.



More than 3,000 bales of hay, some equipment, and tons of shelled corn and soybean meal were lost in the fire which leveled this barn on the Joseph Boll farm, Lititz R2, last Tuesday. The lower part of the barn was relatively undamaged and is being used. Fire engines stationed at the small pond in back of the barn pumped water at a rate of 2,000 gallons per minute.

This new farm building costs **40%** less!



Yes, it costs 40% less than conventional steel buildings!

- It comes in a complete package . . . steel columns and trusses, wood purlins and girts.
- You get unobstructed floor space . . . no poles.
- You put it up yourself . . . the average building takes two men only two weeks or less to construct.

It'll be worth your while to get the complete story about this AGRICONOMY building.

Smoke from the Boll barn fire could seen as far as Lancaster Tuesday ternoon. The fire started with an explosion and spread within minutes to the roof and hay mow.

Firemen and farmers work on upper portion of Boll barn after fire destroyed it Tuesday afternoon.

For more than 2½ hours, pumpers pumped 2,000 gallons of water a minute from pond on the Boll farm as six fire companies fought to save the large barn.

Clean-up and repair work was underway at the Joseph Boll farm before the flames were completely extinguished. Here some neighbors saw a plank to build supports under weak sections of the ceiling. On Thursday afternoon, two days after this picture was taken, 80-90 neighbors gathered to the farm to help, and many of them stayed until midnight.

Lebanon FFA'ers meet for training session

By Melissa Piper

FFA members from all portions of Lebanon County met at the Cedar Crest High School on Thursday afternoon, Oct. 9, for their annual leadership training meeting.

Mr. Joseph Sakalosky, principal of Cedar Crest welcomed the members while Steve Bixler, state chaplain, gave greetings from the state association.

Stan Bucher presented slides on his work experience in Europe and explained the work experience abroad program to the students.

The annual Greenhand Quiz contest was held in the early afternoon with 25 FFA'ers competing. Harvey Smith, area FFA consultant, conducted the contest which saw the youths answer questions concerning FFA and its development.

Scott Ritchie, Northern Lebanon High School captured first in the quiz contest with Eugene Hoffman and Jere Hurst, both representing Elco High School, tied for second.

Elvin Gingrich, secretary of the County FFA, spoke to the group on his trip to the leadership training conference held in Washington D. C. this summer. Gingrich also showed slides of his experiences at the event.

Following dinner, the youths attended individual groups according to the offices they had been elected to. Local ag teachers and area businessmen conducted the sessions which were geared to train the members for leadership work.

About 200 youths from the five schools in Lebanon County participated in the event.

Ray Brickel, (right) FFA advisor from Northern Lebanon High School, presents a check to Scott Ritchie, a young member who won first place in the Greenhand Quiz contest at Cedar Crest High School on Thursday afternoon, Oct. 9. Eugene Hoffman, (left) and Jere Hurst representing Elco High School, tied for second.

National horse seminar slated

Herbert Stuart, President of The Virginia Horse Council, has announced plans for the first National Horsemen's Seminar to be held on April 2-4, 1976 at Fredericksburg, Virginia. The seminar will feature approximately forty leading equine authorities and specialists from coast to coast in a wide range of visual presentations, lectures, panel discussions and live demonstrations. Horsemen and horsewomen, adult and youth, from all states are invited to attend and are encouraged to mark their calendars to participate in one of the largest and most comprehensive educational programs ever designed for the horse industry.

President Stuart, from Batesville, Virginia, has appointed the overall seminar committee which is already at work obtaining renowned speakers and designing the program format. Mr. John G. Hagan, Rapidan River Farm, Lignum, Virginia, is serving as overall seminar chairman and has the following committee members at work: Dr. Dan Flynn, Charlottesville; Mrs. Joan duPont, Bluemont; Mr. Herbert Stuart, Batesville; and Dr. A. N. Huff, VPI&SU. The all-breed seminar will be sponsored by The Virginia Horse Council in cooperation with the VPI&SU Extension Division and Animal Science Department, Rapidan River Farm, and the industry.

Some of the lecture topics will include farm management, taxes, stallion, mare and foal management, artificial insemination, nutrition, corrective and therapeutic shoeing, insurance, equine pediatrics, post mortem pathology, psychology and research reviews Chairman Hagan has announced that one of the first speakers secured was Dr A. M. Merritt from the New Bolton Center; his topic will be 'New Diagnostic Techniques in Equine Medicine" Dr B W. Pickett, Director, Animal Reproduction Laboratory, Colorado State University, has agreed to present a two-hour lecture titled "Semen Production, Collection, Evaluation and Artificial Insemination". Dr. Robert Stear of Norden Laboratories will be present to talk on "Equine Rhinopneumonitis" and Brigadier General Wayne O. Kester of the American Association of Equine Practitioners will discuss "Equine Infectious Diseases in the USA". These speakers indicate the quality and scope of the overall program which will feature forty speakers and topics of similar expertise. Special sessions will also be conducted for youth and youth leaders and all national breed registry secretaries are being invited to participate in a breed use and development panel.

Mike Jennings, Leesburg, and Jack Conner, Manager of Rapidan River Farm, will be serving as Chairmen for a series of demonstrations featuring riders, horsemen and horses of all national acclaim. Demonstrations will include dressage, hunters, jumpers, western pleasure, reining and pleasure horse training. One session will be devoted to Thoroughbred racing, development and training from the weanling to the starting gate.

Headquarters for the seminar will be at the Sheraton Inn, Fredericksburg, Va. Participants should make their lodging reservations early direct to the Sheraton Inn, P. O. Box 747, Fredericksburg, Virginia 22401 (Phone: 703-786-8321). Lectures will be conducted at the Inn and demonstrations will be held at Rapidan River Farm, Lignum, and other leading farms in the area. The Battlefield Saddle Club will provide hospitality workers and transportation from major airports nearby to the seminar for participants. The seminar welcomes ideas and suggestions, and advertising for programs and proceedings to be published. Commercial exhibit space will also be available and prospective exhibitors should contact Exposition Management International, 1000 16th Street, N W., Washington, D C 20036, for information about exhibits

The seminar will release additional news articles to keep horsemen informed about the program and printed programs will be available upon request after January 1st. For additional details about the seminar, horsemen should contact Mrs. Richard Alley, VHC Secretary, P. O. Box 72, Riner, Virginia 24149 (Phone: 703-382-3071) or Mr. John G. Hagan, Seminar Chairman, Rapidan River Farm, Lignum, Virginia 22726. The seminar offers a great educational potential for all horsemen and horsewomen, and the nation will be treated to an assembly of equine specialists never before gathered together as such for a comprehensive program.

Grange To Meet

The Lancaster County Pomona Grange 71 will hold their fall meeting at the White Horse Fire Hall as guests of the Salisbury Grange on Saturday, Oct. 18 at 8:00 p.m.

There will be election of officers for a two year term and plans will be made to entertain Pa. State Grange during their convention to be held Oct. 27-30.

Agrifacts . . .

Irrigated hay fields just before the Revolution yielded three mowings or 2½ tons per acre Without water, there was just one mowing

Bleacher named bank assistant

Mrs. Kathleen H. Bleacher, Ephrata, has been named Assistant Manager of the Ephrata North Office of Farmers First Bank.

A graduate of Kutztown State College with a B.S.A. in Art Education she joined the staff of Farmers First Bank in 1973. She has completed several courses through the American Institute of Banking and is a member of the Lancaster Chapter. A member of the Ladies Auxiliarry to the Pioneer Fire Company she also enjoys doing freelance art work.

Very little of beef animal is wasted

CHICAGO, — ILL. — Quickly now. What do marshmallows, surgical sutures, steel ball bearings, leather and insulin have in common?

Give up?

In one way or another, all are derived from or use a derivative of cattle in their production process.

Hard to believe? Well, according to a new brochure from the Meat Board's Beef Industry Council, beef is just one of the things we get from cattle. (The folder is appropriately titled, "The good things we get from cattle besides beef.") The brochure notes that an average 1,000 lb. steer yields about 432 lbs. of steaks, roasts and beefburgers.

What happens to all the rest? "Very little of the animal is wasted," says John L. Huston, Secretary, Beef Industry CCouncil. "Of the remaining 568 lbs., the majority yields a vast array of edible, inedible and pharmaceutical by-products. Most consumers are totally unaware of how many important products rely on some cattle by-product for their existence."

According to Huston, the Council has received many questions concerning by-products. "Consumers are interested in every phase of our industry. In the past we've explained how beef gets to their tables as well as how to buy, store and prepare the product. But the consumer was more or less unaware of the cattle industry's contribution to the life style of Americans beyond the dinner table."

Of the many by-products mentioned in the brochure, the edible are by far the most well known. Livers, kidneys, hearts, brains, tripe, tongue — all highly nutritious foods, esteemed by many as delicacies.

Some of the inedible by-products also are well-known, especially leather, felt and hair from the hide.

But few are aware of the wide variety of lifesaving, life-improving drugs derived from cattle ... the best known of which is insulin, needed every day by 1.25 million American diabetics. Other pharmaceuticals used every day make childbirth safer, help settle upset stomachs, prevent blood clots, control anemia and assist in cancer research.

Not as glamorous, but useful nonetheless, are by-products which prolong the life of automobile tires, hold plaster on walls and asphalt on streets, or insulate homes. Lubricants, cosmetics, adhesives, soap and violin strings are also on the cattle by-product list.

Besides the brochures, the Council is spreading the by-products story through its series of "thought-leader" advertisements. An advertisement in the September 13 issue of the National Observer will deal with by-products. The series is designed to reach those people who influence overall community opinions.

"Cattle have always enriched man's life," says Huston. "Their importance to modern man goes far beyond being the source of a nutritious and enjoyable food. And it is the many uses for by-products that helps keep the cost for beef well below what it might otherwise be."

Single copies are available, or quantities may be ordered at the following prices: 1 to 99 copies, 10 cents each; 100 to 999 copies, $5.50 per hundred; 1,000 copies or more, $33 per thousand. Write: Beef Industry Council, 36 South Wabash, Chicago, Illinois, 60603.

Gun Care

Serious hunters are now cleaning their guns and gear in preparation for the hunting season. Let's not stop with gear preparation. Consider the condition of the hunter also.

The first day of hunting season each year takes its toll of hunters who collapse and sometimes die. Overweight and poor physical condition are major causes.

Hiking, jogging and counting calories are worthwhile projects for the fellow who wants to get out there and enjoy himself. A hunter should decide on a program of conditioning activities that will improve his ability and the time he can keep going. Start it early and stick to it. Sportsmen can't have a good time hunting if they are out of shape.

Livestock Feed

The harvesting of high-moisture corn has brought some questions to our Extension Office. The practice of making high-moisture ground ear corn or shelled corn has gained in acceptance recently and makes a very good livestock and dairy feed.

Many questions concern the proper amount of moisture in the kernel and cob. Our Penn State engineers inform us the range of moisture for high-moisture ground ear corn is from 30 to 35 percent. For shelled corn, the range is between 25 and 30 percent. If moisture is above these ranges, harvesting should be delayed. If moisture is lower than the given amounts, it is suggested that 2½ gallons of water per ton be added for every one percent of increase in moisture desired. Grain will ferment and preserve itself naturally if the proper amount of moisture is present.

Snowmobiles must be registered

HARRISBURG - Owners of snowmobiles currently registered in Pennsylvania who have not yet received their snowmobile registration renewal application are asked to contact the Snowmobile Unit in the Department of Environmental Resources.

Mrs. Doris Thompson, head of the Snowmobile Unit, reported that over 100 applications have been returned to date because of wrong mailing addresses caused when the owners moved and failed to notify the Department of the new mailing address.

She said all the applications for renewal were placed in the mail during the early part of last week and all owners should have received their applications by now. Those who did not should contact the Department with their correct mailing address and the current registration number.

"I am happy to see that the registration renewal forms are being returned so quickly," said Mrs. Thompson, "and if we receive the cooperation required of all snowmobile owners who have not yet received their forms we will be able to process the applications by the Dec. 1 deadline.

Mrs. Marjorie Todd, registration clerk, said delays occur in processing when a mistake is found. One of the most common mistakes, she said, is sending in the wrong registration fee. The following list of dates should be helpful in determining if the registration fee should be $5 or $10:

Dec 1, 1974 to Nov. 30, 1975. $5. The registration expires Nov. 30, 1975.

Nov. 30, 1975 to Dec. 1, 1976: $10. Registration expires on Nov. 30, 1977.

The current registration is valid until Nov. 30, 1975 so that the renewal cards should be signed and returned with a $10 check or money order.

All registration fees go into a restricted receipts fund which is used to finance the construction and maintenance of snowmobile trails, administer the registration program and for carrying out the Snowmobile Safety Training Program.

To contact the Snowmobile Unit for any reason write to: Department of Environmental Resources, Snowmobile Unit, P.O. Box 1467, Harrisburg, Pa. 17120; or telephone: (717) 783-1364

Manheim Fair celebrates 22nd year

(Continued from Page 20)

second-place lightweight Hampshire market lamb, first-place pen of three Hampshire market lambs, champion Dorset ewe, reserve champion pen of Hampshire lambs, and the third place Dorset market lamb.

Barbara has been a member of the beef and sheep club for four years and says she really enjoys it. "My family has always had sheep and I just picked it up," she explained when asked how she became interested in the animals. She has 10 Dorsets and Hampshires of her own.

Barbara's sister, Elizabeth, continued her winning ways by the grand champion pen of lambs, reserve grand champion individual lamb, champion senior showman, first-place heavyweight Suffolk lamb, first-place lightweight Suffolk lamb and champion Suffolk lamb.

The 16-year old sheep enthusiast and member of the Red Rose Baby Beef and Sheep Club is a junior at Garden Spot High School.

Thirteen-year old Chris Herr had the champion carcass lamb at the Manheim Fair, and was reserve champion junior showman. Active in sheep showing for five years, he says "it's fun." The family has between 80-100 head of sheep on their farm near Narvon.

Other first-place sheep show winners at the fair - the last of the season in Lancaster County - were: Ken Burkhart, Denver, Hampshire ram lamb; Sarah Lynn Brubaker, Lancaster, ewe lamb; Richard Strauss, Ephrata, 1-2 year old Hampshire ewe; Kevin Rohrer, Manheim, fat lightweight lamb, and pen of fat lambs; Lewis Good, Reinholds, Suffolk ewe lamb; and individual lightweight fat Suffolk lamb.

More first-place winners are: Richard Strauss, 1-2 year old Suffolk ewe; Lewis Good, pen of Suffolk fat lambs; Ken Burkhart, Dorset ewe; John Zander, Kirkwood, Dorset ewe lamb; and individual heavyweight Dorset fat lamb.

Kevin Rohrer had the individual Dorset fat lamb and pen of fat Dorset lambs. In Southdown competition, Tim Donough of Manheim R4 ran away with the ribbons.

Continuing her winning ways at fairs and shows is Linda Kauffman of Penn Springs Farm, Elizabethtown. Besides showing the reserve grand champion, she also had the first place two-year old.

Manheim Fair pictures

Henry Gruber (left background) looks over a class of FFA steers during the Manheim Fair. Head livestock buyer for A&B Packing Co., Gruber judged the popular event on Wednesday evening.

Paul Horning of Reinholds showed the Junior Champion of the Holstein show at the Manheim Fair on Thursday night. She is a daughter of Penn Octo Kenny.

Rick Pfautz, Ephrata R2, was named as the senior champion showman during the hog show at the Manheim Farm Show. Pfautz showed several of his Duroc hogs at the event.

It's pretty expensive to buy right now . . . kids like to look over the farm machinery at any display and these youngsters were no exception. The Manheim Fair display attracted much attention from the adults as well as the youngsters.

Conservation guidelines offered

Corn Damaged In Chester County

Corn may feed a hungry world but growing corn causes problems in Chester County when the rains come.

"Wait 'til farmers start picking corn - and find the gulleys that have been washed across the corn fields during the past few weeks; that will be rough on the corn picker," said Frank McBerty, a Conservation District Director from Oxford.

"Where corn has been chopped for silage, the ground is bare and needs a cover crop" chimed in Robert Hodge, a Director from Marshallton.

Conservation District Directors at their monthly meeting this week, were discussing the large number of acres planted to corn in the county, and the resulting loss of conservation practices. The shift from grass and hay crops to corn has taken place in the last two or three years. Drought and short grain crops have hit in Russia, India and many other parts of the World. Foreign governments have been buying grains - carbohydrates from the U.S. Increased demand means higher prices for all grains, including corn.

Chester County is ideal for growing corn. Excellent soils and usually favorable weather means good crops. Corn can produce more dollars per acre than forage crops. Corn can be grown using machinery instead of expensive hired labor. The more acres of a farm in corn, the higher the income per farm.

Farmers and renters of farms are plowing up contours, diversion terraces, strip crops and other soil and water conservation practices. These practices were installed in cooperation with the Conservation District and the Soil Conservation Service over the past twenty-seven years.

Contours, strips and short rows do not lend themselves to the use of large machinery used today. The drive is for more income per acre of land or per farm. Income necessary to pay the expenses and the taxes.

Growing corn leaves the soil denuded when the rains come. Valuable top soil is washed down the hill sides. The roads and streams are covered with silt. Valuable fertilizer is carried away - a total loss for the farmer.

Robert Struble explained that yields would be less on highly eroded land. "The valuable top soil with its humus, soil organisms and fertilizers is washed away. The corn roots are unable to obtain the nitrogen, phosphorus, potash and trace minerals that they need for maximum growth. Hidden hunger sets in. The farmer can actually reduce his profit per acre or per farm by ignoring good conservation practices," Struble said.

Pownall Jones, Chairman of the District said that southern Chester County has had twenty inches of rain in twenty-one days. He said that continuous corn with chemical weed control and poor management could add to the problems.

"A farmer is applying weed control chemicals. He is racing to beat the storm that's coming up on the horizon. He can save a minute or two by not shutting off the control valves when he crosses the waterway. The chemical knocks out the vegetative protection in the waterway. Then the storm has a chance to cut the soil out of the waterway, leaving a gaping gully. Then the township has to get out the road graders to scrape the mud off the roads", Jones pointed out.

Directors indicated that farmers should make every attempt to seed a winter cover crop in the next few weeks. This would provide short term protection.

For long term protection, the Directors advise plowing on the contour. If diversions have been plowed out, they should be rebuilt. Contours should be maintained or reestablished. (Contour strips are one hundred foot wide alternating strips of grass and open ground.) The grass strips will sort out any of the silt that is washed off the open strip above.

"Land owners who rent their land should make sure that good conservation practices are followed," Jones recommended. "The rental agreement should contain a statement that conservation practices will not be plowed out. If conservation practices are not now on the land, the renter should agree to establish these conservation measures, and follow them, to make sure that a minimum amount of valuable top soil is lost."

Marshall Jones of Westtown has planted some of his acres of corn with a 'no-till' method. Using 'no-till' a farmer leaves the grass sod in place. A chemical weed killer is sprayed in a band, each side of the corn row. The seed corn is placed in a furrow, between the chemical bands - just deep enough so that it will be covered with earth. The chemical stunts the growth of the vegetation just enough so that the corn plant can get started. The vegetation between the row is not distrubed. Corn production may be just as good and sometimes better than where corn is grown on land that is plowed and harrowed.

Several farmers in the county are using 'no-till' this year. Glenn Shirk of the County Extension Service is keeping track of corn production using 'no-till'methods. He will have information available for interested farmers and landowners later in the winter.

Struble said that the rains had been especially heavy during the past few days. He saw, "erosion in the woods where there had never been any erosion before."

Bumper

(Continued from Page 1)

"extremely good." Gene Martin, of Sauder's Mill, New Holland, told us that farmers in his area are describing their yields as being as good as last year's. With more acres planted, some are considering building more cribs to hold the bumper crop.

The crop isn't quite 10 per cent harvested yet, according to reports, in fact it's not much more than just begun, says Heistand.

Heistand reports an average moisture content of 16½ per cent for corn entering his elevators. "It's a little high," he remarked, adding that the range is between 23 and 34 per cent. He's also receiving some corn from Maryland's Eastern Shore, where the moisture seems to be down to around 21-22 per cent.

Pennfield Corporation's Landis believes the moisture content this year so far is better than it has been for the last several years. It's running between 22 and 28 per cent for him. He remarked that the yield per acre may not be as high this year, but the additional acreage will make up for it. He estimated that somewhere around 10 per cent of the crop is in.

The big question remaining, or course, is what's the price going to be. The latest national grain report is scheduled for release Friday afternoon, and will most likely have an effect on prices during the coming weeks. Then there's the possibility of more grain going to Russia, as was indicated in Predisent Ford's speech on Thursday night.Thirdly, there's a big crop out in the Midwest. Add all that up and you have what might be called a puzzle. Expectations are that corn prices will break in the near future, and then go up again.

Ayrshire cow sells for $1100

HARRISBURG — Twenty-nine cows brought $13,970 at the Ayrshire sale at the recent All-American dairy show sale held here at the Farm Show Building.

Cows averaged $558, while bred heifers sold for an average of $495. Prices were down substantially from last year.

A top price of $110 was paid by Edward Tunilo, an Ayrshire breeder from New Milford, for "Ardrossan S V C Hilda's Eve," a five-year-old cow consigned by Mrs. H. M. Scott, Villanova.

Another five-year-old cow, "Mentzer Homestead Oracle Jewel," sold for $675, second highest price paid at the sale. The cow, consigned by Ray Mentzer, New Holland, was purchased by Harold C. Rader, Connoquenessing, Butler County.

A cat dreams of garbage.

Take Soil Samples During Fall

Lime, phosphorus and potash can be applied during the fall months, reminds James H. Eakin, Extension agronomist, The Pennsylvania State University. Since plant nutrient levels in the soil are always low at the end of the crop season, fall is an ideal time for taking a lime and plant food inventory of next year's crop needs.

CONSUMER GUIDELINES

The bathroom is one of the most hazardous areas in the home Many bathroom accidents are linked to bathtub and shower

stalls These two structures account for more than 180,000 injuries like falls, burns, electrocutions, and drownings every year

Firemen battle flames, heat and smoke at the Joseph Boll farm, located between Manheim and Lititz. The fire is believed to have erupted when an electric heater malfunctioned and touched off an explosion. The heater had been used to warm up some vegetable oil to be used in a feed mix.

Volunteers from six fire companies battled flames that destroyed the upper portion of the large barn on the Joseph Boll farm, Lititz R2, Tuesday afternoon Included in the loss were 3500 bales of hay, 500 bushel of shelled corn, and three tons of soybean meal. The fire is believed to have been started by an electric heater.

IF YOU ARE NOT ALREADY COVERED BY A PENSION OR RETIREMENT PLAN, A NEW LAW NOW ALLOWS YOU TO SET UP A TAX-SHELTERED PLAN OF YOUR OWN.

Introducing the individual retirement account

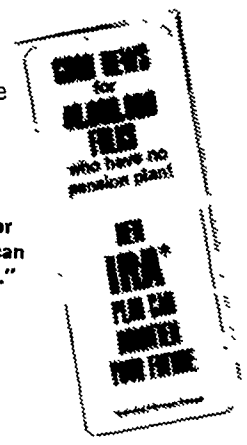
The Congress of the United States recently passed the Pension Reform Act which allows millions of Americans who have not had the benefits of a pension plan, to put aside tax-free dollars for their retirement.

Basically, under this new law you can take money you earn now up to $1,500 a year and put it away for retirement while deducting it from your earnings at income tax time The interest accrued each year is tax deferred

At First Federal the interest rate will always be the highest we pay. But if interest rates change, the rate on your IRA account will be automatically adjusted

Visit any of our five offices for free literature that explains this tax-saving opportunity in detail. Learn how you can use a savings account to enjoy more security in your retirement years and pay less taxes right now. It's very easy

If you're not already saving with us, maybe the time has come



Ask for a free folder titled, "New IRA Plan can Brighten Your Future."

PATZ
MODEL 101 FEEDER AND CONVEYOR

Here's why the 101 is Patz most popular feeder
- Feed can be deposited anywhere along the feeder
- Feed is distributed along the bunk from hopper by a conveyor with tapered bottom
- ... can be used inside or outside
- Chain and flites move at 71 feet per minute delivering up to ... tons of feed to the bunk each minute
- Can elevate feed and convey with optionals
- To fit your requirements the 101 can feed in one or two directions, convey and feed in one or two directions, or just convey

Feature for feature that's why farmers are selecting the Patz model 101 feeder and conveyor

7H285 COMET

WOODBINE PEARL COMET 1516004
Excellent (90) Gold Medal 5-73

"COMET" has earned the Gold Medal award based on his sensational ability to combine high production with outstanding type. His daughters are well balanced cattle, with great width and depth of fore rib. They are quite stylish with straight toplines and long, level rumps. He is perhaps the best bull at SELECT SIRES in terms of ability to sire high wide rear udders. Additionally, the udders are correct elsewhere with proper teat placement and milk-out. Legs are correct with a slight set to the hock. COMET'S dam was a beautiful, high producing cow, and is definitely one of Ivanhoe's greatest daughters. COMET should add style, general appearance, and high production to your herd.

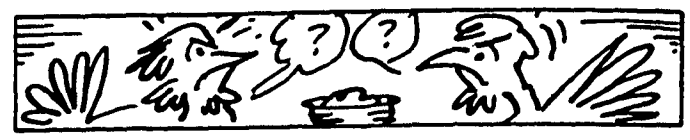
From Local Ag Teachers:

Thoughts in Passing

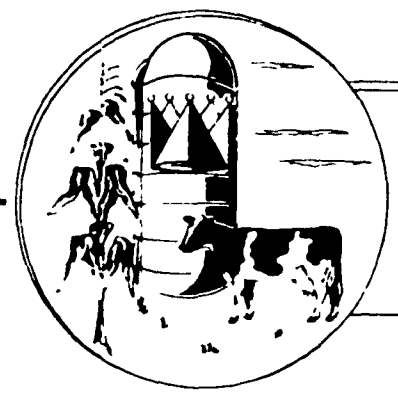
By James Green
Ag Instructor
E-Town High School

I wonder if, on one of these rainy days, you sat back and took a look at your dairy program. If you did can you point to its strong and weak points. Of course there are some areas that you can't change easily, like the layout of your buildings or the size of your barn, but these are things you need to spend time on making long range plans. But how about those other areas that we call management and often end up being chores. The first one that comes to mind is milking and it sure is important. Did you ask yourself what you could do to reduce mastits? Do you need to use a treat dip? Is the water you use to wash the udder warm and clean or are these things just chores? Is the milking machine pulsator set properly and is the vacuum pressure high enough even at the far end of the barn?

Another area that comes to mind is the program set up for breeding your cows. This is probably one of the most important areas in managing a dairy. If this importance isn't realized detecting heat and breeding of cows can easily become just another chore. The real important part of this comes in the actual planning that should be done before the cow is bred. Sire selection should be made on a sound managerial basis with such traits as udder support, feet and legs, and size and strength given consideration along with milk production. I believe every dairyman needs to become familiar with the sire summaries from different sources and use them. The old saying that the bull is half the herd is just as true today. However, even more truth lies in the fact that to be a dairyman instead of just keeping cows you need to make decisions based on methods and information proven to increase production and profits. Sometimes it's not as easy or convenient to implement new practices and it may require a greater involvement in areas you are not familiar with, but it is worth it. Once you've decided what you need to improve don't just sit there. Get out and do it better. The results should be rewarding!



The American turkey got its name from being confused with European Guinea fowl which at one time were imported from Turkey.



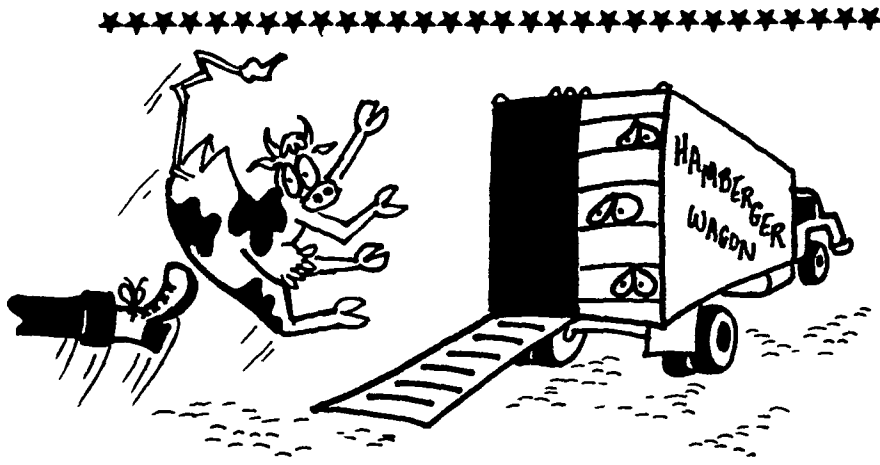
KEY TO PROFIT
AGRI KING, inc.
PERSONALIZED FEEDING PROGRAMS
FULTON, ILL.

AGRI—KING'S OBJECTIVE — SHOULD IT BE YOURS?

The fourth in a series of six articles. The first three available on request. Phone 717-394-3047.

One of AGRI-KING'S main objectives is to get the inherited production of your livestock relatively trouble free. Why do we say relatively trouble free? Because this is the only way we can get the production out of the animals that the purebred people have bred into them. There is no way we can get this inherited production if our animals are sick. Recent research has shown that all animal sickness if not caused by poor nutrition was at least agrivated by poor nutrition. Most ketosis, mastitis and udder edema are caused by a protein - energy imbalance. Most breeding problems, milk fever, cleaning problems and sore feet are caused by an improper balance of calcium, phosphorus, vitamins and trace minerals.

The first law of nature is survival, and the second law of nature is reproduction, and reproduction is the number one problem in the dairy industry today. There are more good cows sold because you can't get them bred than any other single reason. Sometimes it can be a mechanical problem but this is rare. It's mostly caused by an imbalanced nutritional program.



These are some of the reasons why only 2.5 lactations per cow is our national average. Consequently our better cows never reach their prime production. This is also why the average herd has 25 to 60 percent first calf heifers and turns over 85 to 90 percent of its cows every three years. These are some averages AGRI-KING would like to help the farmer change for the better.

It doesn't take any more feed to feed a cow through her 4th and 5th lactations than it does through her 1st and 2nd lactations, but there's a lot more net profit feeding good cows through their 4th, 5th and 6th lactation.

There is only one way these problems can be held to a minimum and your cows brought to their peak production. That is to test your roughage and balance your ration according to your tests, the body weight of your cows and their breed. Any other way you cannot get the inherited production relatively trouble free for any length of time.

TEST YOUR HOME—GROWN FEED AND BALANCE IT THE AGRI—KING WAY!

PURINA

COW CHOW

38%B

NON-UREA CONCENTRATE

to give your cows the energy and protein they need for top production at low cost!

6 WAYS BETTER

1 - Strict Quality Standards.

All ingredients, including soybean oil meal, that go into Purina Dairy Concentrates are carefully inspected to make sure each comes up to Purina's strict quality standards.

2 - Uniformly High Palatability.

Because of the uniformity of Purina Dairy Concentrates, palatability is high and remains constant.

3 - Accurate Mixing.

The highly specialized equipment and micro-mixing processes employed at Purina Chow plants help assure that Purina Concentrates are accurately and completely mixed so that every bite contains balanced nutrition.

4 - Balanced Nutrition.

All Purina Concentrates contain the proper balance of nutrition because they are formulated and carefully tested by Purina's top team of Dairy scientists.

5 - Uniform Protein Content.

Purina Dairy Concentrates are not subject to wide variations in protein content due to heating, processing and variations in hull content.

6 - Service From Your Purina Dealer.

When you buy Purina Dairy Chows from your Purina dealer you are doing business with a man who cares about your success with the Purina Chows he offers his customers. He firmly believes service is an important factor in the success of both his customers and his feed business.

4-H leaders help youth learn skills

by Sally Bair
Farm Feature writer

Being a 4-H leader can be time-consuming, frustrating and tedious. But it can also be rewarding, challenging and a joy. Ask any 4-H leader.

Each year over 300 adult leaders in Lancaster County give of themselves to assist the nearly 2650 young people who are 4-H members. Without the dedication and hard work of the volunteer leaders, there would be no 4-H program as we know it.

During 4-H week some of the adult and teen leaders reflected on their involvement with 4-H. All of them agreed that it was an experience they enjoy and that the rewards far surpass the work they put into it.

Milton Brubaker, 660 Brunnerville Road, Lititz, a 4-H dairy leader for 22 years, seemed to express the feeling of many when he said, "I feel the rewards of being a leader far outweigh the time and energy involved. Helping to make better citizens is worth any sacrifice adults may make."

Brubaker has been involved in 4-H for quite a while. He recalled that when 4-H clubs were first coming "into vogue" in the early twenties, his mother "thought this was a wonderful idea for youngsters. So she got after the bank - Farmers National of Lititz - to get a meeting room, asked W. Martin Muth of the Soil Conservation Service to be a leader and asked County Agent 'Dutch Bucher to get the club organized." As a result they got together a garden club, the first 4-H club in the county.

Brubaker was a member of that club "for two or three years, until I was no longer eligible age-wise." He also joined the baby beef club which was organized soon after. He became a 4-H leader when his own youngsters were of 4-H age. He is a leader of the Ayrshire-Brown Swiss-Jersey 4-H Club.

What has been a highlight for him? "It is rewarding to watch boys and girls who are unsure of themselves and who don't know what to do as they develop poise and the ability to meet people and develop skills. It is amazing to see the skills they develop in handling animals." Another benefit of showing animals, Brubaker says, is meeting the many fine people at district and state events.

4-H'ers have not changed much over the years, Brubaker said. "When a young person is just starting out, he still has youthful desires and the energy and enthusiasm of wanting to accomplish something."

Mrs. Arlene Miller looks at some of the paper craft projects completed by club members Cindy Harr and Judy Miller. Both girls are members of the Landisville Klassy Klippers.

The desire of the 4-H'ers to learn something is one reason why Mrs. Michael Miller enjoys being a leader. Mrs. Miller, a leader for the Landisville Klassy Klippers for two years, says she got drafted through her woman's club which sponsors the 4-H club. She also has a daughter in 4-H, and "so I ended up helping."

Mrs. Miller, who resides at 1116 Mill Mar Road, Lancaster, introduced a new project to her girls this year - paper craft. There were no project books, but the 4-H'ers learned scherensnitte, quilling, making 3-D plaques and pin pricking. Mrs. Miller said, "Just working with the girls is fun, and they come because they want to be there. They really want to learn something."

Mrs. E. Robert Bare, a ten year leader now working with the Strasburg Merrimaids agree that it's great to work with the youthful enthusiasm. "It means something to me when the kids are interested. You must want to learn to sew." She added that it is thrilling "when one of the 4-H'ers places in county competition - this is encouraging.

Teen leader Ken Brubaker demonstrates some of the finer techniques of clipping a show animal to members Mark Myers and Margie Myers, Lancaster.

Homestead Notes

She said most 4-H'ers "are willing to adapt and try newer methods. But sometimes they try to do things fast and it dosen't always pay off."

In her ten years as leader, Mrs. Bare says "the sewing projects have changed somewhat. In the advanced projects more girls are working with doubleknits, especially because it is sometimes difficult to find good wool fabric in the spring when the projects must be started. We always have a variety," she said. She said, "Girls seem to be learning to sew at a much younger age than before."

About sewing, Mrs. Bare said, "I enjoy it. I have a satisfaction in sewing and being creative." She also likes being a 4-H leader, but adds, "I appreciate all the help the Extension office gives in teaching new trends in sewing. It is good because every learning experience does overlap and helps in something." Mrs. Bare lives at 815 Waterfront Drive, Lancaster.

Mervin Peifer, Manheim R1, became a leader 23 years ago in the Lititz-Manheim club. At that time, Peifer says, the leaders were nominated and elected by the 4-H'ers - and that's how he got started.

"What I really like is to see a member who really takes hold and goes. There are a lot of good kids who have help from their parents." And here Peifer stresses, "It's very important for 4-H'ers to have support and help from their parents."

For leaders he added, "There are slaps on the back and jabs in the back, but there is nothing more rewarding than to see a member walk away with first prize at round-up."

Roy Sauder, Mount Joy R2, has been a leader in the E-Town-Donegal Club for five years and he works closely with the capon projects and helps set up the round-up at the Mount Joy Rotary. About becoming a leader Sauder says, "I got in 4-H because I have children who were in it."

As a farmer, Sauder says sometimes he feels he is "too busy, but I enjoy it."

Mrs. David Weaver, 315 S. Franklin Street, worked with urban youth in the Good Use 4-H club. She became a leader five years ago through her church, the South Christian Street Mennonite Church. A fellow member, Tillie Gibson, nutrition aide supervisor, asked both Mr. and Mrs. Weaver to help with the club. Mrs. Weaver liked working with her husband as a leader because, "it was easy to have a partner."

"One of the main things I liked was to get to know the girls and guys better in the community. The Christian emphasis was important to me. I really like that about 4-H, and that's one reason why I enjoyed it."

"It is worth the time to be a 4-H leader even though there are a lot of headaches and sometimes you may want to give up." Mrs. Weaver said the 4-H club in the city was a little different, "but it helps broaden their horizon."

It was especially rewarding to Mrs. Weaver to watch them learn to do things themselves - even very little

Country Corner

Cattle-Livestock becoming popular commodities

By Melissa Piper

Prime agricultural products have always been in great demand by other countries as imports Dairy products, grain and even farm machinery have seen many years of prosperous trade from the United States to countries all over the world Perhaps the commodity most popular however, over the past few years has been the export of high quality livestock and dairy cattle

The International market development activities committee recently announced that "thousands of animals each year are being sent to all parts of the world to be used as foundation stock for breeding herds and flocks"

Almost every type of livestock common to United States farms have become commodities of trade and with seemingly increasing popularity

Here in Lancaster County alone each year, many heifers are sent to the Middle East for use in building up existing herds of dairy animals

Sheep, swine and numerous strains of poultry have also found their way to farms across the Atlantic and Pacific oceans and are becoming a way of commodity much needed and appreciated

Dairy Cattle Popular

Dairy cattle have become the most asked for livestock commodity for trading in the past three years Not only have the live animals commanded much attention and demand but also frozen semen for all breeds of dairy animals

The Holstein-Friesian Association of America, which has set up an office to begin cultivating the export for animals of the breed, recently noted that many foreign buyers are very selective about the cattle they purchase

"They (purchasers) are very selective about the cattle they may specify milk production requirement, functional type requirements and even blood-line requirements"

Noting the increase needs for food and particularly dairy products, many foreign countries are anxious to build up good quality - high producing herds While many dealers purchase indirectly from well known American farms, many countries and corporate farms send purchase agents to the United States to view the cattle first hand.

And while many breeds of dairy cattle are now in demand all over Europe and South America, the most popular seem to be the Black and White and Red and White Holsteins

Foreign purchasers have noted that the Holsteins are in demand because of their good record of milk production, while the Red and Whites have become particularly well liked in the Central and South American Countries because of their ability to withstand heat and high temperatures.

While importing beef breeds has been popular of late for US farmers, it seems that our dairy cattle have just as much appeal to the producers in other countries.

So it seems as if the US has added another commodity to its long list of agricultural exports high in demand What, if any implications it will have in the future as far as dairy products are concerned is still to be determined, but as of now livestock and particularly dairy cattle seem to be "hot times" on the commodity market.

4-H leaders help youth learn skills

|Continued from Page 46|

things. "The girls didn't even know how to read r' uring cups, so it was a thrill when they made a meal b_ ' mselves. You know you're getting somewhere when you see something like that."

To Kenneth Greider the end product was also the highlight for him. Greider, Conestoga R2, said, "The highlight was when we had Achievement Day and had the opportunity to see how the projects were judged. We were on pins and needles at the end, wondering if they were going to make it because of the pressure of time, but they were quite successful. It was nice to see how well they showed the project. Some had made visual aides to help explain it."

Greider was leader for the electricity and electronics project in the Penn Manor Community 4-H Club. He said he had been familiar with 4-H because his children were in it, but didn't really know the philosophy until he got involved as a leader. This was his first year.

Victor Longenecker, Elizabethtown R3, has been a 4-H leader longer than anyone else in the county - 42 years, and "I enjoyed every minute of it," he says enthusiastically.

He became a 4-H leader under the tutelage of County Agent "Dutch" Bucher, and very early as a leader he formed a quartet of members who were later able to attend the National 4-H Club Congress in Chicago. "That was quite an experience - a wonderful time. I could tell you a lot of things about that." Interestingly, when the Longeneckers celebrated their 50th wedding anniversary five years ago, the same 4-H'ers sang for them.

Victor Longenecker has worked with many 4-H'ers during his years as leader in the Red Rose Baby Beef club. He says, "I can't get done praising youth. Nothing makes me feel happier than to have a former 4-H'er of mine stop me on the street and say 'hello.'"

Longenecker said, "4-H'ers have remained about the same over the years. The youth as a whole have changed, but farm youth have not changed. I'd be ten years older if I hadn't been a 4-H leader." He sums it up pretty succinctly when he says, "I have seen good things happen."

Adult leaders shoulder the bulk of the responsibility for the 4-H program, but in many cases they are helped by teen leaders who take on individual tasks. According to Linda Frantz, 4-H assistant in Lancaster County, there were 34 4-H'ers who completed the teen leader project this year.

Ken Brubaker, 2418 Harrisburg Pike, Lancaster, completed the teen leader project with the Red Rose Baby Beef and Lamb Club. Ken has been a 4-H'er for seven years. His job, he explained, was to work with four younger people and teach them the basic requirements of leading, grooming, showing and feeding and management of their 4-H animals. He also assisted with demonstrations.

"At first I thought it was a lot of work, but the more involved I got the more rewarding it became. It is a good feeling of helping others. Hopefully what you teach them helps them and watching them do good makes you feel good. I think it is very worthwhile. It has taught me to be more responsible and how to work with people."

He says he would recommend the project "for anyone after their sixth year when they can get around a little better. It helps the younger members get started."

Sixteen-year-old Gayle Kline, East Main Street, Mountville is a seven year member of the Mountville 4-H Club, and it's her third year to take a teen leader project.

Her job as teen leader this year was to teach the "Let's Make a Skirt" project to three members. She explained the girls actually made slacks, which is a little more difficult than a skirt because of the fitting involved.

Being a teen leader was a learning experience for Gayle. She explained, "I'm sure it helped me in a learning to work with young members. I really like it - the working on my own. I followed the book, but added a few things of my own.

Gayle was also club president and said her roles of president and teen leader were "kind of mixed. I learned a lot of responsibility - there was a lot of planning involved."

"I love it," is how Heidi Bailey, Stoney Hill Road, Quarryville, described being a teen leader. She has been a member of the 4-H Rough Riders for five years.

The teen leader project has helped her learn to get up before people and express herself. Another thing, she said, "I have learned to have respect for other people and they respect me."

Heidi 17, said being a teen leader also helps her realize how much work adult leaders put into 4-H. She said, "In our club we work as a team we are all striving for one thing."

Dan Fellenbaum, Lititz R3, has been a teen leader for three of his seven years in 4-H. Sixteen-year-old Dan is a member of the Boots and Saddles Horse Club, and he has responsibility for about five 4-H'ers. One thing it has taught him is responsibility. He said, "Helping to keep them on their toes also makes you keep yourself on your toes. The questions they come up with!"

Dan gave lots of credit to both leaders and parents, saying there is a certain group of really active parents who help keep things going in their club.

The Bit and Bradoon 4-H Horse club is the smallest in the county. But for sixteen-year-old Judi Anderson, being a teen leader "was really fun." She said she was assigned two 4-H'ers to work with, and she "did a lot with demonstrations."

About the members she said, "We learned a lot from each other." Being a teen leader "really helped me grow up and it helped me responsibility-wise. I really like to work with kids." As for the leaders and their work, Judi said, "They have a lot of work." Judi lives at 1440 Country Club Drive, Lancaster.

And so, with fine teamwork between teen leaders and adult leaders, the work of the 4-H program goes on. Each year thousands of young people benefit from the hard work by those in positions of leadership.

Associate County Agent N. Alan Bair said, "4-H leaders really deserve a lot of credit. Few people realize that they are all volunteer leaders." Often Bair said, people feel they are not qualified to be leaders themselves. However, he said, "Anyone can be a leader in some capacity."

And, although the many hours of work, and the frustrations pile up, the joys, the satisfactions and the rewards pile even higher. And as Milton Brubaker puts it, "Helping to make better citizens is worth any sacrifice."

Tuna or similar-sized cans make good containers in which to bake little cakes for lunch boxes. Slice the cakes and fill them with frosting

Home on the Range

This week we are featuring a variety of recipes that were sent to us by readers from all over the state. We really enjoy hearing from farm women and sharing their recipes with all our readers.

We're trying to compile a file of recipes for Thanksgiving meals and we would like to have yours. If you have a family favorite for cranberry relish or spicy pumpkin pie - why not send it along?

For more recipes and cooking ideas see our Junior Edition Column.

Famous Oatmeal Cookies

¾ cup shortening, soft
1 cup firmly packed brown sugar
½ cup granulated sugar
1 egg
¼ cup water
1 teaspoon vanilla
1 cup sifted all purpose flour
1 teaspoon soda
3 cups oats, uncooked

Beat shortening, sugars, egg, water and vanilla. Sift together, flour salt and soda, add to creamed mixture. Stir in oats. Drop by teaspoonsfuls onto greased cookie sheets. Bake at 350 degrees for 12 minutes. For variety add coconut, chocolate chips or nuts.

Fannie Glick
New Providence

xxx

Dump Cake

Dump one large can of crushed pineapples in a 9x13 inch baking pan. Dump over it one large package of coconut. Cover with 1 box of yellow cake mix and cut 2 sticks of margarine or butter in thirds and place on top. Bake at 325 degrees for 1 hour.

Mrs. Roy Garber
Lititz, PA

xxx

Pizza Sauce

3 quarts tomato juice
2 cups onions
2 tablespoons cooking oil
2 cups sugar
1 teaspoon salt
1 teaspoon garlic salt
½ teaspoon pepper
¾ teaspoon chili powder
¾ teaspoon oregano

Brown onions in Wesson oil. Add the rest of the ingredients and simmer 20 minutes. Thicken with clear jel and seal.

Mary S. Fisher
Loganton, PA

xxx

Biscuit Mix

8 cups flour
one-third cup baking powder
8 teaspoons sugar
2 teaspoons cream of tartar
2 teaspoons salt
1 cup dry milk
1¾ cup shortening

Sift dry ingredients and cut in shortening. Put in airtight container. Use as needed.

Lizzie Lapp
Ronks, PA

xxx

Spaghetti Sauce

2 pounds hamburger
4 gallons omato juice
salt to tase
1 teaspoon pepper
2 ounces minced g arlic
½ ounce oregano
small amount of sugar

Brown hamburg in a small amount of oil. Add tomato juice and bring to a boil. Add remaining ingredients and simmer. Jar and process 60 minutes at 10 lb. pressure.

Velma Koons
Felton, PA

xxx

Pumpkin Cookies

3 cups cooked pumpkin
1½ cups shortening
2 cups granulated sugar
5 cups flour
3 teaspoons baking powder
2 teaspoons cinnamon
1 teaspoon cloves
3 teaspoons vanilla
2 cups raisins
1 cup chopped nuts

Mix pumpkin, shortening, and sugar together. Add flour, baking powder, spices and vanilla and mix well. Add raisins and nuts. Drop on cookie sheets. Bake at 375 degrees for 12-15 minutes.

"Let us never forget that the cultivation of the earth is the most important labor of man."

DANIEL WEBSTER

LADIES, HAVE YOU HEARD?

By Doris Thomas, Extension Home Economist

Know your nutrients when buying Health Foods

Today, people are concerned about the health values of certain foods or combinations of foods. According to nutritionists at the United States Department of Agriculture, no single food or combination of foods have any health-giving properties other than the nutrients they provide singly.

For example, consider a combination of honey and vinegar. These foods have no special nutritional merit, singly or together. About four-fifths the weight of honey is a mixture of sugars. The remaining one-fifth is water. Honey has only very small amounts of other nutrients. Distilled vinegar has only a trace of mineral matter.

Yeast is also considered a "health" food by some. Brewer's yeast is a good source of the B vitamins and of protein of high biological value. However, you get an adequate amount of these nutrients if your diet includes meat, eggs, and whole-grain or enriched cereals.

But don't confuse brewer's yeast with baker's yeast. Baker's yeast is a live yeast that you should not eat either directly or in powder form. Baker's yeast is a living organism that uses thiamine in your intestinal tract for its own growth. In this way, it reduces the amount of thiamine from other foods that your body should be getting. Cooking inactivates the live property of baker's yeast so it's harmless in bakery products.

Remember - always check the so-called health foods for their nutritional contests.

Ladder Safety

Fall clean-up may mean painting, window washing and roof repair at your house. If you climb up a ladder to work take these safety pointers along with you.

While working or climbing, always face the ladder and hold on with one hand. If it's necessary for you to use both hands in your work, hook a leg over a rung to secure yourself.

Make sure a stepladder is fully spread and locked. Check to see that its supporting points are level on a base.

Never stand on top of a ladder. There's always a danger of losing your balance. Rather, distribute your weight carefully so you won't overload or upset the ladder.

Don't climb if your shoes are wet or muddy - it's too easy to slip and fall.

If you are using an extension ladder to climb put onto a roof, the top of the ladder should extend at least two feet above the roof. If it's too short, it may be unsafe or difficult for you to get on and off the roof.

And, of course, never erect a metal ladder near exposed electrical wires.

Ida's Notebook

Ida Risser

This past week I prepared a family geneology back to the great grandparents for our daughter who is taking a college course called "American Family." They plan to relate the "average" family and its problems to your own family.

I was struck by certain similarities in all the families over three generations. For one thing, all of the seven were farmers; but not until they had tried hand at something else. All but one attended Millersville Normal School, Business College or Franklin and Marshall Academy. And that one gave up farming for awhile and moved to Millersville so his daughter could attend college.

Also amazing was the fact that four of the seven women had education beyond public school. These families dated back to 1840's and 1850's when education was not for everybody. There was a total of 16 years teaching experience but teachers in those days were not paid enough to support a family and so they farmed like their fathers. They were active in community affairs and I told my children, with ancestors like that it is no wonder they like school and have so many interests.

The other day I glanced out the window and saw a "big" herd of black and white cows. Now they were not all ours, rather they belonged to us and two neighbors. All that separated them was an electric fence and the Conestoga. If someone thoroughly mixed them, I think it would take half a day to separate them.

One of ours swam the creek recently and in trying to chase it home the neighbors fence was torn down as it ran from one herd to another. Instead of boating across to repair it, Allen and Philip loaded their tools in the pickup truck and drove almost four miles to repair the damage.

We are not always so lucky when a cow swims the creek Sometimes they don't make it. Another neighbor lost an animal in the recent high water and it was discovered several days later caught on limbs almost a mile away

Junior Cooking Edition

Home on the Range

Have you ever heard of Grasshopper Pie? Well one of our readers sent the recipe along to us and we couldn't help sharing it with you. And to get in practice for the Thanksgiving season why not try your hand at pumpkin pies? They are all in this week's Junior Edition.

More recipes are included in our Home on the Range column.

Two Pumpkin Pies

2 cups brown sugar
2 cups pumpkin
4 eggs, beaten
1 quart milk
4 tablespoons flour
½ teaspoon nutmeg

Combine ingredients and add a little salt. Place in a pie shell and sprinkle with cinnamon. Bake 1 hour at 375 degrees.

Sadie Glick
Quarryville, PA

Seven Day Sweet Pickles

7 pounds medium sized pickles
1 quart vinegar
8 cups sugar
2 tablespoons salt
2 tablespoons mixed pickle spice
water to cover

Wash cucumbers and cover with boiling water. Let stand 24 hours and drain. Repeat each day for 4 days using fresh boiling water each day. On the 5th day cut pickles in ¼. On the 6th day drain brine from pickles and bring to a full boil and pour over pickles again. On the seventh day repeat same as the 6th and jar and seal.

Bena Glick
Quarryville, PA

xxx

Party White Cake

2½ cups sifted flour (cake)
1 and two-thirds cups sugar
two-thirds cup shortening
1 teaspoon salt
¾ cup milk

Mix well and add 4½ teaspoons baking powder and 5 egg whites. Plus ½ cup milk and 1 teaspoon vanilla. Bake at 350 degrees for 30-35 minutes.

Katie Glick
Quarryville, PA

xxx

Vegetable Soup

1 quart potatoes
1 quart carrots
1 quart corn
1 quart green beans
1 quart onions
2 cups macaroni
½ cup brown sugar
3 pounds of hamburg fried
2 tablespoons chili powder
6-7 quarts of tomato juice

Cook all vegetables and macaroni until tender.

Annie Glick
Quarryville, PA

xxx

Fried Rabbit

1 rabbit cut in serving pieces
¼ cup fat
½ cup flour
1½ teaspoons salt
⅛ teaspoon pepper

Dress the rabbit, cut in serving pieces and soak in salt water 6-8 hours. Drain and roll in flour. Place in skillet containing the hot fat. Fry pieces until golden on both sides. Add 2 cups water and allow to steam until tender. Serves 6.

Annie Zimmerman
Mt. Pleasant Mills

xxx

Grasshopper Pie

24-30 cream filled chocolate cookies (finely crushed)
¼ cup butter or margarine melted
¼ cup creme de menthe
green food coloring
1 jar marshmallow cream
2 cups heavy cream, whipped

Combine crumbs and butter. Press into a 9 inch spring pan, reserving ¾ cup of mixture. Add cream de menthe and food coloring to marshmallow. Fold in whipped cream and pour into pan. Sprinkle with remaining crumbs and freeze.

Mrs. Ben Stoltzfus
Kinzers, PA

Grange talent winners named

Winners in the Region H grange talent competition were recently named following eliminations at the Kutztown Grange Hall in Berks County. Contestants in their individual classes were as follows:

Farm Women Societies

Society 27

Society of Farm Women 27 met September 23 in the garage at the home of Mrs. Lester Hawthorne of Elizabethtown, R1.

A mother - daughter team provided special music. Diane Hawthorne sang, while Hazel accompanied her on the piano.

Mrs. Yvonne Miller read Psalms 37 from the Living Bible and lead in prayer.

Favor committee is in charge of an exhibit table at the Holiday Homemakers Day, November 13 at the Farm & Home Center.

The nominating committee in charge of Sue Heineman reported the following new officers: Vice President - Mrs. Herbert Frey, Corresponding Secretary - Mrs. Raymond Martin, Treasurer - Mrs. Larry Miller.

Members interested in making "Health Poster" for the County Contest bring them to our November meeting.

Our next meeting is October 28 at St. Mark's United Methodist Church, Mount Joy, to enterntain Society 13 and County Officers.

Mrs. John Nissley introduced Mrs. Greiner of Mount Joy as our guest to demonstrate the art of "Quilling". She showed beautiful note paper, Jewelry, Christmas tree ornaments, framed wedding invitations and more things she made. She gave step by step instructions of how to make the different pieces used. We each tried our skill at making some of the pieces.

Many ladies enjoyed exchanging plants and slips brought to share.

Society 6

The October 3 meeting of Farm Women Society 6 was based on group participation. It was held at the home of Mrs. Emory Wolgemuth with Mrs. Paul Hess as co-hostess.

After group singing each member recited a favorite Bible verse for devotions. The roll call was answered by telling a joke.

Sara Holsberg and Katie Brandt told of visiting our "adopted" patient at the Harrisburg State Hospital. Minnie Wolgemuth told of plans for serving the dinner at Wyeth Laboratories in Marietta on October 22. A letter was read from Faye Stoner who thanked the society for support for her stay in West Germany.

Members gave safety hints and Mrs. Milton Eberly reviewed the by-laws of Farm Women.

Cookies had been baked by members who brought them and the recipe. The ladies could then pick up from other plates as many as they had brought. Following this an auction of food items was held with Mrs. Harry Shonk as auctioneer.

The next meeting will be held November 8 at the home of Mrs. H. Martin Hoffer. County Convention is to be held on November 1.

xxx

Don't Shake Flour Cup

According to Extension foods and nutrition specialists at The Pennsylvania State University, flour should be spooned lightly into a measuring cup and then leveled off with a spatula.

Eating alone can be enjoyable

Eating alone has it's advantages. For example, there is no one to complain about what is being cooked and how it's cooked. Favorite foods can be prepared often with no comment from anyone else.

Another advantage is that cooking for one takes less time and energy than cooking for a lot of people. Time and energy saved can be used in other ways - reading, working with flowers, doing handwork or a hobby, or just visiting with friends. And when eating alone, rigid mealtime schedules don't have to be kept as is sometimes necessary when a whole family eats together.

However, eating and cooking for one can be a problem, too. The boredom may contribute to a poor appetite which may eventually result in some health problems. Here are some ideas from Extension foods and nutrition specialists at The Pennsylvania State University to make eating alone more enjoyable.

For variety, invite a friend or two for a meal occasionally or exchange foods with friends or neighbors. Share a favorite main dish that's sledom fixed because it makes so much. Maybe friends will share something in return.

Take lunch or supper on a tray to another room-perhaps to watch television. Or eat while reading the morning paper and have breakfast in bed.

Leftovers may be a problem to the person who eats alone. But leftovers can be creative challenge - how many different ways can it be fixed? With a roast, for example, it can be sliced for a cold or hot sandwich, made into hash, cubed in a casserole with rice, grated cheese, and seasoned sauce and many other ways.

Flower show slated

A flower show entitled "Discover Lancaster" will be held Saturday Oct. 11 and Sunday Oct. 12 at the Farm and Home Center, Arcadia Road, Lancaster.

Sponsored by the Town and Country Garden Club in cooperation with the Lancaster Area Garden Clubs, the show will be opened by Lancaster Mayor, Richard Scott on Saturday afternoon at 3:00 p.m.

Donations will bebefit the educational services of the Farm and Home Foundation.

The real price of protein

Protein, that vital nutrient which builds and repairs body tissues, forms "antibodies" which fight infection, and supplies energy as well, is frequently overlooked when selecting and pricing food. Dairy Council nutritionists encourage homemakers to read product labels and acquire nutrition knowledge in order to "set a better table" while combatting the ever-increasing cost of living.

Based on figures supplied by the Cooperative Extension Service at Rutgers University, it is possible to compare the cost per pound of meat, poultry, fish, eggs and milk as purchased at the store, with the cost per pound of what finally reaches the table as edible food. The Rutgers data are confined to food sources of high-grade animal protein.

Percentages of loss in preparation of the items listed range from dairy products, which are 100 percent edible, to lamb, of which only 47.5 percent may remain as consumable food after cooking and boning. Applying these percentages to Philadelphia Market in-store prices as of mid-September, 1975, and listing the foods in order of the cost per edible pound, milk heads the economy list at 16 cents and lamb is at the high end at $3.89. Cottage cheese, milk, and eggs were lower in cost than February 1975 prices at the stores checked. Fish remained at the same price level with fowl, processed cheese, and meats somewhat higher. Pork advanced higher than all other foods studied with a 39 percent increase in cost per pound.

Because adequate nutrition is a prime consideration with the modern homemaker, the Rutgers figures have been supplemented with the amount of protein per edible pound supplied by each kind of food, and more importantly, the amount of protein per dollar spent.

Although meats rate highly in amount of protein per pound, they are also an expensive source of this nutrient. Turkey, milk, cottage cheese, chicken, and eggs supply the most protein for amount spent.

Dairy Council suggests that homemakers can ease the food budget without lowering nutritional quality by planning meals around main dishes delivering high quality protein at the lowest possible cost.

Snyder to speak at Grange convention

HARRISBURG - J. Luther Snyder, master of the Pennsylvania State Grange, will address the opening session of the organization's 103rd annual convention which will be held in Lancaster October 27, 28, 29 and 30.

Delegates from the 598 subordinate Granges throughout Pennsylvania will assemble at 1:30 p.m. Monday, Oct. 27, at the historic Fulton Opera House in downtown Lancaster for the formal opening ceremonies. About 2,000 delegates, Grange members and young people who are active in Grange junior and youth programs will attend the four-day convention.

Snyder, who was elected last year to a two-year term, will deliver the traditional Grange master's address at 2:30 p.m. In it, he will review accomplishments of the past year and focus attention on future goals and objectives of the state Grange.

Two hours later, the first of a series of policy-making resolutions will be put before the delegates by the Legislative Committee, of which Charles E. Wismer, Jr., of Collegeville, is chairman.

One of the highlights of Tuesday afternoon will be the initial report on preparations for Pennsylvania to host the National Grange convention in 1979. Sites of the national convention usually are designated five years in advance, and Pennsylvania's invitation was accepted by the National Grange last November.

This will mark the first time in 42 years that Pennsylvania has been selected for the National Grange convention. The last time was in 1937 when the national sessions was held in Harrisburg.

LARC sponsors meeting

The Lancaster Association for Retarded Citizens will hold their October meeting in the Blair Room, Community Services Center, 630 Janet Avenue, Lancaster, on Monday Oct. 13, at 7:30 p.m.

Subject of the meeting will be a review of Summer Programs - Camps and Recreation, and plans for the summer of 1976.

Jones and Miller named outstanding extension agents

COLLEGE PARK, Md. — Two Extension agricultural agents — from central Maryland and the Eastern Shore — have been elected to positions of leadership by the National Association of County Agricultural Agents. Both are 1950 College of Agriculture graduates from the University of Maryland at College Park.

Robert L. Jones of Westminster (Carroll County) was named president-elect at the 60th annual NACAA meeting last week (Sept. 28-Oct. 2) in Milwaukee, Wis. and Robert G. Miller of Hebron (Wicomico County) was elected as the Northeast region director.

Jones served as NACAA vice-president last year, and he was general chairman for the organization's 1973 annual meeting, held in Baltimore. Miller had been named to a two-year term as vice-director for the Northeast region at the Baltimore meeting.

The new NACAA president-elect has been the Carroll County Extension chairman since 1964. He came to the county in 1957 after a two-year stint as assistant county agent in Dorchester County, on Maryland's Eastern Shore.

A Harford County native, Jones grew up on a farm near Street and graduated in the vocational agriculture curriculum at Highland high school. After earning the B.S. degree in general agriculture from the University of Maryland at College Park in 1950, he began his career in Extension as an assistant county agent in Prince Georges County.

Jones is also a past president of the Maryland Association of County Agricultural Agents and former regional chairman of the national organization's program committee. He was Maryland's winner of the NACAA Distinguished Service Award in 1971.

Miller, the new Northeast region director for the NACAA, has a 24-year career in the University of Maryland's Cooperative Extension Service. Currently chairman of the Wicomico County Extension staff, he has been county agent at Salisbury since 1955 and an assistant county agent in Cecil and Wicomico counties, successively, from 1951 to 1955.

A native of western Maryland, Miller grew up on farm near Accident (Garrett County). He holds a B.S. degree in agricultural education from the University of Maryland at College Park and an M.S. in extension education from North Carolina State University.

Miller received the "Excellence in Extension" award in 1973 from the College of Agriculture alumni chapter of the University of Maryland Alumni Association-International.

He was the Maryland winner of the Distinguished Service Award from the National Association of County Agricultural Agents in 1970; he is a past winner of the NACAA's Geigy award for agricultural leadership, and he placed third in 1972 in a national contest for newspaper column-writing sponsored by the NACAA.

Commodity symposium slated for spring

CHICAGO - America's role in feeding a hungry world will get a lot of attention at the 25th National 4-H Commodity Marketing Symposium to be held here Feb. 29- Mar. 3, 1976.

The symposium is sponsored annually by the Chicago Board of Trade, donor of awards in the national 4-H commodity marketing program.

Top 4-H'ers from as many as 39 states are eligible for expense-paid trips to Chicago to attend the symposium. They will have an opportunity to see firsthand the action on the trading floor of CBT, the nation's oldest and largest commodity exchange. Also on the agenda will be visits to processing plants and marketing facilities, plus question-and-answer sessions with marketing and trading specialistss.

Symposium participants are selected on the basis of their records of accomplishment in 4-H by the Cooperative Extension Service, which conducts the commodity marketing program.

In addition to expense-paid trips to Chicago for the winners and partial reimbursement for their chaperons, the Board of Trade offers medals of honor to as many as four 4-H members in each county conducting commodity production and marketing activities. All awards are arranged and announced by the Natioanl 4-H Service Committee.

Nearly 85,000 4-H members from 9 to 19 participate in learn-by-doing activities designed to give them an inside view of the marketplace. 4-H'ers explore basic marketing concepts as they apply to commodities sold in cash markets and traded in future markets of major commodity exchanges. They apply their market know-how to ongoing 4-H projects in grain and crop production, forestry, livestock and poultry production, food-nutrition, farm management and consumer education.

More information on the program is available from county extension agents.

Uranium Low

Stockpiles of uranium are getting low It's a space-age fuel, and more new nuclear power plants are increasing the demand for it. Prospectors have to look farther to find it Mining companies have to spend more to produce it Between now and the end of the century, the United States will need another 1 5 to 2 2 million tons of uranium, to add to present stockpiles, to use as power plant fuel According to some experts, nuclear power plants may generate up to 60 percent of the nation's energy demand by the end of the century.

Why you should add

THE EFFICIENCY FACTOR

to your feeding program

With feed at 5¢ per pound and cattle selling at 35¢ a pound, an investment of less than $1.00 per head for AUREO S 700 and AUREOMYCIN® returned $5.75 in five commercial trials.

When cattle arrive at your feedlot, they've been stressed and exposed to a variety of disease organisms Start them with a conditioning feed containing AUREO S 700 and feed it for the first 28 days. AUREO S 700 maintains weight gains in the presence of shipping fever

Then, follow up with feeds containing AUREOMYCIN chlortetracycline AUREOMYCIN not only provides for excellent growth and feed efficiency, but also helps reduce losses from liver abscesses, foot rot and bacterial diarrhea

For complete details contact any of the feed manufacturers listed below, or call or write The Fox Company

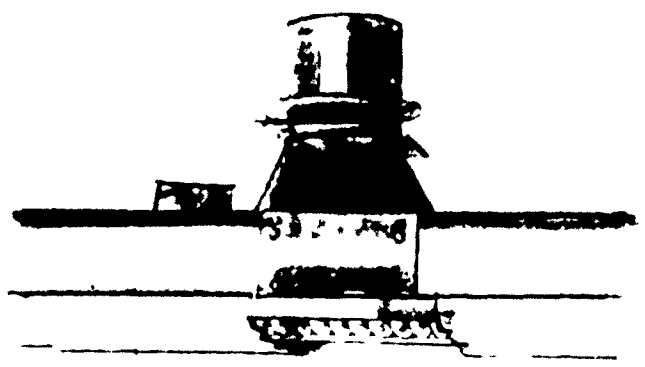
What's New . . .

Harvestore Introduces New U-Trough Auger Conveyor for Grain

ARLINSTON HEIGHTS, Il. - A 5-in. U-trough auger for conveying high-moisture grain has been introduced here by A. O. Smith Harvestore Products, Inc.



For efficient conveying of free-flowing materials, the auger is suspended on hanger bearings, installed in the 14 gauge, galvanized steel U-trough at intervals of 10 feet. The bearings are permanently lubricated and have low friction characteristics as well as being quiet running.

The new auger also features optional slide gate drop-outs and drop-tube accessories to permit design flexibility for multiple delivery locations in hog, dairy or beef installations.

All components and accessories of the Harvestore 5-in. U-trough Auger are ruggedly constructed to exacting specifications to provide simplicity of layout designs, economy and dependable operation and to satisfy most feed grain distribution requirements.

Besdies conveyors and other automated feeding equipment, A. O. Smith Harvestore manufactures oxygen-limiting feed storage systems up to 25 by 90 ft. in nominal dimensions, as well as liquid manure storage systems with above ground holding tanks ranging to 61 by 15 ft. in size.

New Flowers

MOUNTAIN VIEW, CALIF. - Ferry-Morse Seed Company has announced the availability of three new flower seeds for the seed trade.

The new seeds are Helichrysum, Gypsy Caravan; Marigold, Mellow Yellow; and Geranium, Miniskirt Mix.

The Helichrysum, Gypsy Caravan is a brilliant colored mix which has become very popular for use in dried flower arrangements. The semi-dwarf plant is uniform and grows to approximately two and one-half feet.

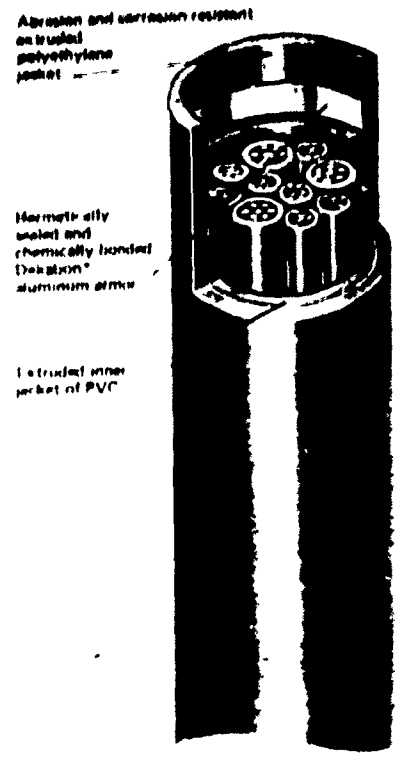
The Marigold, Mellow Yellow is a large, bright yellow chrysanthemum-type flower which attains a uniform height of two to three feet.

The Geranium, Miniskirt Mix is a new variety from Ferry-Morse. In company conducted tests, this mix flowered earlier than Florist Mix and other open pollinated varieties.

For more information on these new nursery flowers, write the Ferry-Morse Seed Company, P.O. Box 100, Mountain View, California 94042.

Dekoron Irrigation Cables

AURORA, OHIO - A new line of pre-engineered, factory-fabricated irrigation cables has been announced by the Dekoron Division of Samuel Moore and Company. These power-control cables are designed specifically for center pivot irrigation equipment and can be used to equal advantage for new or replacement installations.



Abrasion and corrosion resistant extruded polyethylene jacket
Hermetically sealed and chemically bonded Dekabon aluminum armor
Extruded inner jacket of PVC

Dekoron irrigation cables are manufactured to strict quality control standards to withstand the rugged environments in which they are used. Exclusive Dekabon construction features a polyethylene outer jacket hermetically sealed and chemically bonded to an aluminum armor tube. While flexible and easy to install, the tough outer jacket provides outstanding resistance to abrasion, corrosion, and ultraviolet radiation and has excellent low temperature characteristics. Superior mechanical strength protects against potential physical damage during installation such as machines running over the cables, angle irons being dropped on them, etc. The combination of aluminum tube hermetically sealed to the outer jacket and to the extruded PVC inner jacket result in a waterproof construction that is virtually impervious to attack from fertilizers, herbicides, insecticides, and other corrosive elements. Dekoron irrigation cables are designed to meet Article 675 of the National Electrical Code.

For more information on Dekoron Irrigation Cables, write Robert Thomas, OEM Sales Manager, Tubing, Dekoron Division, Samuel Moore and Company, Aurora, Ohio 44202. Phone: 216-562-5151.

What's New . . .

Fearing Announces New Beefed-up Hog Tag That won't pull out of sow's ears

Fearing Mfg. Co. has come up with an improved Tuff-Flex ear tag that solves the last remaining problems of keeping flexible tags in hogs' ears. Although many livestock breeders have found ear tags by far the easiest identification system, hog breeders have stuck with other methods like ear-notching because tags were so hard to keep in hogs. Sows pulled tags out as fast as hogmen tagged them, which is no way to identify your animals.

The biggest problem with keeping tags in hogs' ears is their tendency to snap at each other, particularly at anything they see flapping from the ear. This is where Fearing Tuff-Flex tags have a big advantage over other types. They have a curved vertical anchor that locks tight against the back of the

ear, and a wide flat neck (that part that goes through the ear). These features insure that the tag stays snugly in place, and doesn't flap around.

Hogmen have reported only one problem with previous Tuff-Flex tags: Now and then one would break off at the neck. So Fearing's new, beefed-up hog tag has a thicker, wider neck and a wider anchor.

Tuff-Flex tags come blank or factory-numbered from 1 to 9999.

Fearing is the world's largest manufacturer of flexible livestock ear tags. The St. Paul-based firm's tags are used on all kinds of animals, including such difficult applications as wildlife identification projects.

Master Mix Announces New Precision Baby Pig Feeding Program

FORT WAYNE, IND. - A new Master Mix Precision Baby Pig Feeding Program designed to produce heavier pigs and more uniform litters with reduced scouring has just been announced by the Feed Division of Central Soya Company, Inc.

The new program is based on two new feeds, Primer 1 and Primer 2. Master Mix Research specialists began the development of the Precision Baby Pig Feeding Program with an extensive study of the energy requirements of baby pigs. They found that sow's milk, while rich in protein, varies greatly in energy.

Their objective quickly became clear; to formulate a nursing ration that would supplement - not replace - sow's milk, to get more energy to the baby pig without adding excessive amounts of protein that often cause digestive disorders.

Tests of the new formula with thousands of pigs produced gratifying results. Baby pigs gained better and showed better overall feeding efficiency. That means lower cost of gain and higher profits, a Master Mix spokesman pointed out.

Equally important, the researchers found that in trials, the new ration helped reduce scouring and digestive problems, while consistently producing more uniform litters.

With justifiable pride, Master Mix nutritionists are calling the new program "The most important breakthrough in baby pig nutrition in more than 25 years."

The new feeds are in a new baby pellet form chosen after feed consumption tests of virtually every size and shape.

Primer 1 is recommended for feeding only to nursing pigs while Primer 2 is fed from weaning to 40 pounds.

Details of the new Precision Baby Pig Feeding Program are now available from Master Mix Dealers.

Average Cow

The average cow gives about 350 pounds of milk a week That means a cow must eat 315 pounds of silage, 105 pounds of hay, 118 pounds of grain, 14 ounces of salt, 14 ounces of general food substance—and she must have 175 gallons of water—all in one week

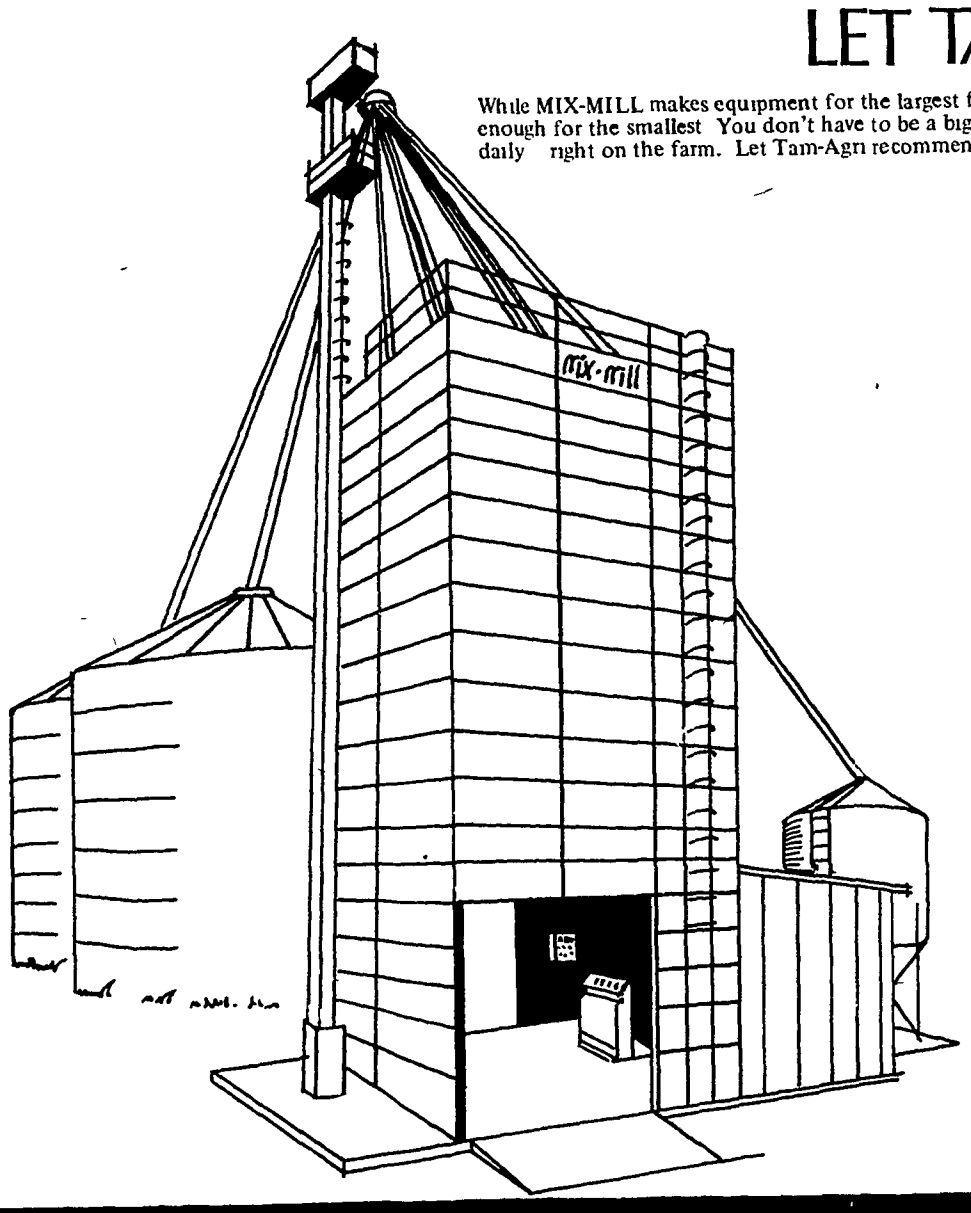
MODERN FARM FEED SYSTEMS CAN CUT COSTS FOR YOU.

LET TAM-AGRI SHOW YOU HOW WITH MIX-MILL.

While MIX-MILL makes equipment for the largest feeders, it also makes units economical enough for the smallest You don't have to be a big operation to enjoy fresh mixed feed daily right on the farm. Let Tam-Agri recommend a system that's right for you.



BINS

MIX-MILL storage bins are square Each holds 25 tons The versatile square design enables the farmer "on the grow" to combine bins that provide 300 to 400 tons capacity or more as he needs them Advantage Multiple compartments can hold drfferent grains if desired

INSIDE FEED ROOM

Each bin is mounted on steel legs located around the outside edge and at 12 ft centers in the work area of large combinations This area, when enclosed with steel panels provides a feed room for gravity feed mills, blender, and other equipment

REMOTE CONTROL PANEL

MIX-MILL'S unique remote control panel gives you total command of your feed making operation. Just set the ration recorders to the amount of feed desired and dial in the ration formula for perfectly proportioned feed

ROASTERS

Studies show roasted grains are more digestable, more nutritious Roasting capacities of 150 to 6,000 lbs per hour enable your operation to receive grain from storage, roast it, and deliver it to the mill for grinding and mixing efficiently and quickly

NUTRI-BLENDER

MIX-MILLS mixer which blends up to 500 lbs. of supplement or pre-mix, permits custom blending of supplements for feeding needs of different groups of animals

LEGS, AUGERS, U-TROUGHS

MIX-MILL completes the feed processing system with a complete selection of items for expandable automatic feed making systems.

BASIC SPECIFICATIONS

6 ft on a side, Heavy galvanized steel Formed-in reinforcement ribs in each panel, 60° hopper bottom. Capacity figured at 50 lb per cu ft

What's New . . .

AAtrex - Princep Variable Ratio Receives State Registration

AAtrex plus Princep applied at variable ratios has received state registration in Michigan, Pennsylvania and Virginia to control most annual broadleaf and grass weeds in corn, including fall panicum and crabgrass. The ratio varies depending on soil texture.

AAtrex and Princep are Ciba-Geigy triazine herbicides that are applied perplant incorporated or preemergence.

Preplant application should be made as broadcast treatment in the spring after plowing. The combination can be applied up to two weeks before planting to east the spring workload.

Preemergence application should be made at planting or shortly after planting, but before crops and weeds emerge. Recommended rates and complete label instructions should be followed!

For additional information contact Mrs. Betsy Wood, Agricultural Division, Ciba-Geigy Corporation, P.O. Box 11422, Greensboro, N C. 27409.

Stauffer Brochure Describes Weed Control with Eradicane

Stauffer Chemical Company has made available a new brochure describing the registration of Eradicane herbicide for control of nutsedge, quackgrass, bermudagrass and broadleaf weeds in corn.

Eradicane is also registered for reducing competition from johnsongrass rhizomes.

The brochure explains the importance of proper preparation of the soil and rhizomes before applying Eradicane herbicide by way of an eight step weed control program. The brochure also includes three maps illustrating the distribution of nutsedge and quackgrass in addition to recommendations for applying Eradicane in the western, eastern, and central regions.

For your copy of Eradicane bulletin No. FS-0536 write: Stauffer Chemical Company, Agricultural Chemical Division, Dept. KP, Westport, Conn. 06880.

Red Lion FFA'ers attend contests

Dan Innerst and Jay Caudill recently participated in two different regional judging contests because of their high placings at the 1975 Summer FFA Convention.

Jay Caudill who placed 7th in the Summer FFA Convention Livestock Judging Contest earned an expense paid trip to Richmond, Virginia to the Invitational Livestock Judging Contest of the Virginia State Fair. Jay was part of the three man Pennsylvania FFA Team who placed second out of nine different state teams. Jay tallied a score which was enough for third high individual in the contest out of 36 contestents.

Dan Innerst who placed 6th in the Poultry Judging Contest at the Summer FFA Convention was part of a three man team which won a trip to Springfield, Massachusettes to participate in the invitiational poultry judging contest as part of the Eastern States Livestock Exposition.

Labor Force

Today's labor force includes more than 35 million women, 13 million of whom are mothers Statistics show that the average woman worker earns less than three-fifths of what a man does—even when both work full-time year round

Hog commodity leads in third quarter gains

CHICAGO - Third quarter trading in live hog and bullion futures on the MidAmerican Commodity Exchange posted 183 percent and 97 percent gains, respectively, over the third quarter in 1974, J. Robert Collins, president, announced. July through September live hog trading totaled 36,617 contracts, and silver trading totaled 99,280 contracts, contributing to a total of 666,701 contracts traded in all commodities, up 12 percent from the third quarter in 1974.

The estimated dollar value of all contracts traded in the first nine months of 1975 totaled $8.1 billion, up 8 percent over the same period in 1974. Contracts changing hands from January through September totaled 1,889,719, an increase of 21 percent over the correcponding 1974 period.

September trading volume was also up 8 percent over September 1974. The most active contract last month was corn, with 69,293 contracts traded, followed by soybeans with 51,893 transactions. Corn and soybean volume during the first 9 months of 1975 each increased 43 percent over the equivalent period in 1974.

By The Book

Two cub scouts, whose younger brother had fallen into the lake, ran home in tears. "We tried everything, they sobbed. "We even gave him artificial respiration—but he kept getting up and walking away "

Merger recommended

WASHINGTON — A recommendation to amend and merge the Boston Regional and Connecticut federal milk marketing orders, and combining the marketing areas they now cover, has been announced by the U. S. Department of Agriculture (USDA). The proposed single order would be known as the New England federal milk marketing order.

H. L. Forest, dairy official in USDA's Agricultural Marketing Service (AMS), said the recommendations are based on a public hearing in Auburn, Mass., last November. The hearing was requested by eight cooperative associations representing over 80 percent of the producers supplying milk for the present Boston and Connecticut markets.

Lickin' Good

Nutrena Controlled Release CLS — so different, it's patented

Your cattle will like Nutrena Controlled Release CLS and you'll like the benefits behind this new development in liquid supplements The patented process controls the release of protein-building ammonia nitrogen in the rumen compared with a conventional urea-based liquid supplement. This improves the feeding efficiency of the urea. And, the slow-down means an extra margin of safety from urea toxicity—that's important when self-feeding liquid supplement.

Nutrena Controlled Release CLS liquid supplement—a product of Cargill research. It's great for dairy herds as well as beef cattle on range, pasture, stalks, stubble or in the feedlot.

Neppco plans 14-state convention

HERSHEY, Pa. - Poultry producers from the 14 northeastern states will return to the heart of Pennsylvania's farmbelt once again this year for an annual exposition weighted heavily with practical guidelines for on-farm profits during the immediate years ahead.

As an example, the best means of capitalizing production by 1980 will be explored by successful business experts from varied backgrounds in one of nearly a dozen educational phases of the program planned for those attending the 44th anniversary convention of the Northeastern Poultry Producers Council.

Producers and allied industrymen will gather for the first time in the Hershey Convention Center when they meet October 21 through 23.

Emphasis on the Keystone State is strong at the convention. Most of the 205 entries in the big market egg show and in the best-carton-of-the-show contest are from Pennsylvania farms, and the state always wins in the attendance figures. Dr. L. Dwight Schwartz, professor, Veterinary Science Extension, at Penn State University, is but one of several speakers with intimate experience with the state's agricultural concerns.

Fred Adams, eminently successful president of Cal-Maine Foods in Jackson, Miss., will share the platform with two expert financial advisors to the poultry industry in the production capitalization discussion on Wednesday, October 22.

One of the others, C. F. Dickson, vice president of Federal Land Bank of Baltimore, will look ahead to the increasing dependence lenders will be placing on adequate hedging programs, and William Grossclose, vice president, Rockingham National Bank, Harrisonburg, Va., will view the futures market as a useful tool in industry.

"We probably have a larger percentage of our money in the poultry industry than any other financial institution, and we've never lost a dollar on a poultry loan," Grossclose says. "But, if the industry expects to continue to get adequate long-term financing, it must trim the vicious cycles which plague it. The industry will benefit from the good, new blood which seeks to become a part of it, but new people will not be attracted to it, nor can they survive, without greater supply-demand stability."

In store for visitors at the big new Convention Center will be the 1975 edition of the latest in poultry products, equipment and services, the big market egg and carton shows, youth and ladies special programs and accompanyong social events.

Information on show registration is available at NEPPCO offices, 322 Oxford Valley Road, Fairless Hills, Pa. 19030, telephone 215-547-0190. Room reservations should be made directly with the Hershey Motor Lodge.

HEAT RECORDER...The world's first floral thermometer has been unveiled at Kings Island, the 1600-acre family entertainment center near Cincinnati, Ohio. Display is 35 feet long and plants are red, green and yellow Alternantheria. Every two hours during the day pans of red plants are repositioned in the temperature line to record the temperature.

Five new bulls available

WINTON, Calif. - Five young sires in the Holstein bull battery at Carnation-Genetics' stud in Highson, Calif., have become available with their first proving, reports Ron Eustice, general manager.

Westport Astronaut Star, GP 83, is one of these bulls. His P.D. is plus 649 lb. milk, plus 15 lb. fat, 40 percent Repeat., for a plus$47 value. His 18 daughters in 8 herds have averaged 16,057 lb. milk, compared to herdmates' average of 15,212 lb. milk.

A son of Paclamar Astronaut, VG 88, GM, plus 818 lb. milk, Star is out of Aaron-Del Star Tena Sue. She is a VG 89 daughter of Penstate Star Man, and has six 306 day records over 23,399 lb. milk. His Genetics Breeding Guide shows his daughters to be plus in fore udder, rear udder, teat size and placement, and thipel.

Gerloff Sensation Seneca Chief, another of the bulls, has a P.D. of plus 574 lb. milk, plus 37 lb. fat, 38 percent Repeat, plus$37. A son of Skokie Sensation Ned, Excellent, SP, he's out of Rag Apple Atbith Fobes. She's a VG 85 cow with a lifetime of 127,838 lb. milk, 4,832 lb. fat, with no records under 23,000 lb. milk.

Nunesdale Dividend Sailor is the third of the quintet. He's a son of Romandale Dividend Performer, VG, GM, P.D. plus 1,131 lb. milk, and is out of Nunesdale Admiss Silvia, VG 87, whose six records average 16,315 lb. milk. Sailor's P.D. is plus 530 lb. milk, plus 3 lb. fat, 29 percent Repeat. Eustice pointed out that Silor's Genetic Breeding Guide shows his daughters are plus in stature, strength and rear udder, showing strong, good width of front end.

With 24 daughters in 13 herds averaging 16,867 lb. milk, J-L-Kinglea King Daniel has a P.D. of plus 502 lb. milk, plus 26 lb. fat, 48 percent Repeat, plus$53. He is a son of the famous Whirlhill Kingpin, VG 86, SMP, plus 1,178 lb. milk. King Daniel is out of Meredith Grandier Diana, a VG 85 daughter of Carnation Madcap Grandier. Her five records average 17,108 lb. milk, 298 days.

King Daniel's Genetics Breeding Guide shows his daughters are above average in stature, plus in strength, rear udder, teat size and placement, and thipel. They also show fast milk out. He's reported to mate best with strong cows needing more will to milk and cleaner bone.

Rounding out the group is RuAnn Performer Ivan. He has 21 daughters in 6 herds that average 16,741 lb. milk, giving him his first P.D. at plus 638 lb. milk, plus 11 lb. fat, 37 percent, plus!43.

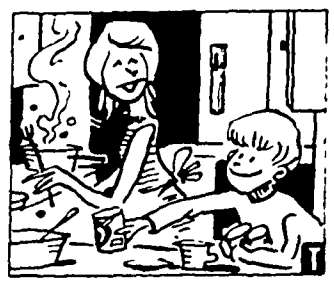
He's a son of Romandale Dividend Performer, VG, GM, plus 1,131 lb. milk, and is out of Calafair Ivanhoe Rose. She's Excellent 90, with a lifetime of 150,730 lb. milk, 5,321 lb. fat, 2,444 days. Ivan's Genetics Breeding Guide shows his daughters are real dairy, milky cows that are real sound from a functional standpoint, and show plus in dairy strength.

FIRE PREVENTION TIPS

Taking steps toward fire prevention should be second nature Our families and homes are important

1 Check your wiring system often Make sure it's adequate to handle appliances, especially the new, larger ones recently purchased Frayed cords should be repaired

2 Remember built up grease can catch fire on the stove



3 Store gasoline and other flammables in tight metal containers Oil soaked rags also go in these types of cans

4 Use flammable liquids outdoors or near enough ventilation to disperse vapors Don't use flammable liquids near heat or while smoking

Tevoca officers elected

The Tevoca chapter of the Future Farmers of America of Brownstown Vo-tech held their first meeting recently and elected their officers for the 1975-76 school year.

Richard Kirby, a student of horticulture, was elected President. Richard is a senior at Manheim Township High School and is in his second year in the horticulture program.

Elected as Vice-President was Edward Funke. He attends Garden Spot High and is a senior in horticulture.

The office of Secretary will be filled by Sharon Bare. Miss Bare is a senior at Conestoga Valley High School, and is in her second year in the floriculture program at Brownstown.

Janice Geary was elected Treasurer. She attends Cocalico High School where she is a senior. She is also in her second year of floriculture.

Faye Hegener, a senior at Manheim Township High School, was elected Reporter. Faye is in her second year in the floriculture program.

The office of Sentinel was taken by Luther Shaffner. Luther is a senior at Conestoga Valley and is in his second year of horticulture.

Tim Morrison was elected Chaplain. Tim is a senior at Manheim Township High School and is in his second year of horticulture.

Tevoca FFA officers pictured from left to right are: 1st row - Tim Morrison, Richard Kirby; 2nd row - Janice Geary, Luther Shaffner, Edward Funke, Sharon Bare, and Faye Hegener.

The advisors are Mrs. Brown, the teacher of floriculture, and Mr. Patterson, the horticulture teacher.

The chapter will be holding their fall picnic at Long Park on Oct. 9. It will be a covered dish to which the FFA chapters at Willow Street and Mt. Joy are invited. Rain date is Oct. 16.

ORTHO-GUARD™

A TOTAL APPROACH TO TREATING AND STORING HIGH-MOISTURE FEED GRAIN.

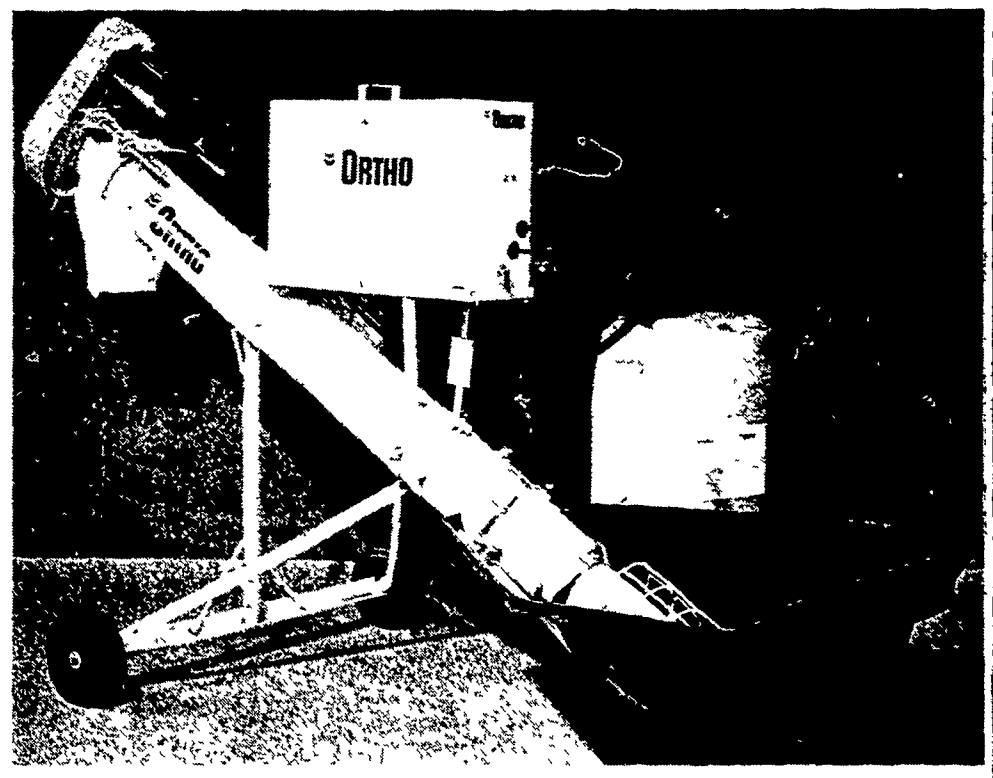
ORTHO GRAIN PRESERVATIVE

+ Reduces the need for air tight storage.
+ Protects grain quality and feed value.
+ Used on the farm for 4 years.

Ortho Grain Preservative offers a practical way of cashing in on the advantages of harvesting and storing high mositure feed grains.

Ortho Grain Preservative lets you move your crop directly from the field to storage where it gets a chemical coating of protection before it goes into conventional buildings.

The result: there's no need to tie up huge amounts of capital in drying equipment or sealed silos. Grain that's treated according to label directions resist spoilage for up to 12 months when stored in metal bins, wood cribs and similar low cost storage structures.



Unit available on rental basis or can be purchased.

Treats up to 900 bushel per hour, depending on moisture content of grain.

See or call us for complete information on Ortho-Guard™ and applicator.

Farm to fair 4-H beef program

CHICAGO - Beyond souvenir stands, commercial exhibits and carnival attractions on the midway lie what many young people might call the "real action" at the state fair: the junior livestock judging events.

Last summer's fairs are only a memory now to many of the 160,000 boys and girls in the national 4-H beef program. To others, the experience is to come in the next month or two. Regardless of time, 4-H'ers who take part in judging contests get a real-life workout in decision making and confidence building that perhaps can never be duplicated.

Learn-by-doing experiences like judging and showmanship events are only part of the 4-H beef programs sponsored by Celanese Chemical Company, A Division of Celanese Corporation. In a variety of projects supervised by the Cooperative Extension Service, 4-H members from 9 to 19 acquire breeding, feeding and management skills thay can apply to caring for one or more beef animals.

4-H'ers also earn awards donated by Celanese through the National 4-H Service Committee. The company offers $800 college scholarships to six national winners in the program, and expense-paid trips to the 54th National 4-H Congress, Nov. 30-Dec. 4 in Chicago, to one winner from each state.

Up to four 4-H'ers per county are eligible for medals of honor. All winners are selected by the Extension Service on the basis of their records of accomplishment in 4-H beef projects.

A beginning beef project may involve raising one or more feeder calves to market weight, then selling them for a relatively quick return. More advanced 4-H cattlemen can undertake beef breeding and stocker-feeder projects. Whatever activity they choose, program members keep up to date on current trends in beef production and marketing.

Judging and showmanship contests test the decision making abilities of the 160,000 young people in the national 4-H beef program sponsored by Celanese Chemical Company. The program, supervised by the Cooperative Extension Service, enrolls 4-H'ers 9-19 in a wide range of breeding, feeding and management "learning by doing" projects.

Young farmers to meet

Area farmers are invited to attend an educational meeting on Fertilizers on Tuesday, October 14, 1975, at 7:45 p.m. in the agriculture classroom of the Garden Spot High School in New Holland. Subject areas that will be studied at the meeting will include: fertilizer price and supply for 1976, trends toward bulk blended fertilizer, update on new developments in fertilizer industry, and a review of the various forms in which nitrogen can be applied and timing of application. The speaker for this meeting will be Mr. Max Maichele, an agronomist from Toledo, Ohio.

If you are thinking of purchasing your fertilizer before the end of the year or plan any fall fertilizer applications, this timely meeting should help you make the decision more wisely. With an excellent production year with an excessive amount of rainfall, large amounts of nutrients may have been used by plants or leached out. The importance of soil tests will also be discussed in relation to these conditions. Any area farmer is invited. Refreshments will be served.

If you need softened butter for baking in a hurry, shred it on a vegetable grater, using the larger holes.

Grade standards for lettuce revised

WASHINGTON - The U.S. Department of Agriculture recently announced a revision of the U.S. grade standards for lettuce, to bring the standards in line with current marketing practices. The revised standards will be effective Dec. 1.

According to the Fruit and Vegetable Division of USDA's Agriculture Marketing Service (AMS), the revised standards are essentially the same as those proposed in the June 4 Federal Register (USDA press release 1605-75). The changes in the standards:

-Increase from 6 to 7 the number of wrapper leaves permitted in "fairly well trimmed" lettuce. Lettuce must be "fairly well trimmed" to qualify as U.S. No. 1. The revised standards also contain a black and white sketch to illustrate wrapper leaves - those leaves which do not closely enfold the head.

-Establish a trimming requirement for the U.S. No. 2 grade. Lettuce meeting this grade is required to be "reasonably trimmed"; this allows 12 wrapper leaves.

-Delete the U.S. Commercial grade. Eliminating this grade is consistent with the Fruit and Vegetable Division's interest in making grade nomenclature more uniform. In the revised standards, the grades for lettuce are U.S. Fancy, U.S. No. 1, and U.S. No. 2.

-Limit the number of soft heads - those that are easily compressed and spongy to 5 percent of the total tolerance for defects.

-Eliminate pre-cooling as an exclusive requirement for U.S. Fancy and establish it as an option; this allows all grades of lettuce in producing areas to be certified as pre-cooled if the lettuce reaches a core temperature of 36 degrees Fahrenheit (2.2 degrees Centigrade) before it is loaded for shipment of storage.

In addition to these changes, the revision deletes weight as a requirement in the "standard pack" section and establishes a new section defining "standard weight." Use of either of these sections is optional.

The revision was scheduled for publication in the Oct. 7 Federal Register. Copies may be obtained from the Fruit and Vegetable Division, AMS, I.S. Department of Agriculture, Washington, D.C. 20250.

AMS establishes quality standards and provides official grading for many food and farm products. Use of the standards and grading service is voluntary.

Spray Cans

Recent undocumented studies have shown that freon from aerosol spray cans interacts with other elements in the atmosphere to form fluorcarbons which may be depleting the layer of ozone around the earth. This ozone layer filters out damaging ultraviolet rays from the sun.

Sheep-dogs shown

Preceptor Kappa Chapter of Beta Sigma Phi is sponsoring a Country Fair and Border Collie Sheep Dog Exhibition on October 18 from 12 to 6 at Sheep Hill Ranch, Hershey Mill Road (near Mountville). Donation is $1.00 for adults and $.50 for children under 12 for the benefit of The S. June Smith Center for Special Children.

Spinning, weaving, schnierenschnitzen, quilling, and tin smithing will be demonstrated. There will also be homemade candles, games, pony rides, refreshments, and special music. Exhibitions of Border Collies working sheep will be at 12:00, 2:00, 4:00, and 6:00 p.m.

Since there is limited parking at Sheep Hill Ranch, we will have a free shuttle bus service from the Heil Company and Fabral Corp. lots in the Hempfield Industrial Park for anyone purchasing tickets in advance. Tickets may be obtained by phoning 299-4829.

Wayne Care-Gram

Hay or pasture... even with oats... can't go it alone.

Wayne Front Runner Horse Krunch is the total balancer high in taste appeal that adds the extra energy your horses don't get from hay or pasture alone.

Front Runner furnishes ample vitamins, minerals and protein. Plus the energy of top quality grains. Pure cane molasses provides flavor that horses love.

Front Runner is a clean, easy-to-handle feed. The grains are crimped or cracked.

Vitamins, minerals and other fine particle ingredients are combined into small pellets. Let your Wayne Dealer show you a sample. If you don't know who he is, write Allied Mills, Inc., 110 North Wacker Drive, Chicago, IL 60606.

Your Wayne Dealer cares. That's what makes the difference.

Learn How To Save 3 To 7% On Feed Costs...

The FEEDSAVER™

Keenco's new **FEEDSAVER** is the first truly controlled feeding system It's all new — both mechanically and in principle.

FEEDSAVER doesn't use a chain. Instead, a traveling hopper rides above each Triple "A" Line cage row. As it moves along it meters a thin ribbon of feed in the trough

You control and restrict the amount of feed distributed according to a pre-determined plan

The plan increases feeding efficiency — more eggs per pound of feed. And, since there's never more than a minimal amount of feed in the trough, billing out is practically eliminated. No feed separation either. All birds get a complete ration.

With feed costs running about 67% of the cost of each dozen eggs, it's easy to see how the **FEEDSAVER** System could produce a healthier profit for you

We have a new idea in egg collection, too. A whole new front end on Triple "A" Line which gives you cleaner eggs, more accurate counting, and step-saving efficiency

Of course, we've retained the patented, bird-shaped Keenco Contour Cage and the same watering, ventilation, egg collection, and manure removal systems that have made the Keenco Triple "A" Line Automated Cage Layer System the leader in productivity. And don t forget our **TOTAL HELP** program, the program that helps you with planning, financing, building, operation and training

For more information about new FEEDSAVER, and free brochure use the attached coupon.

Combines pulled off the field once enough acreage was cleared on the James Willrett farm for tractors with plows, disks and balers to go to work.

Hundreds of pieces of equipment participated in the Ag Progress Show on this Illinois farm last week.

Crop statistics released

HARRISBURG - Fields remained wet, but dryer weather allowed a return to normal fall field activities for the week ending October 6, according to the Pennsylvania Crop Reporting Service.

Activities included filling silos with corn, harvesting apples, corn, tobacco, potatoes, grapes and seeding winter grains.

Soil moisture was recorded at three-fourths surplus and one-fourth adequate with the wettest areas in the south and the dryest in the north.

The tobacco crop is virtually all cut and curing well, on a par with 1974.

The storage quality of potatoes which were harvested are wetter than usual. The potato crop is 61 percent dug, behind last year's 69 percent.

Corn for grain is now four percent harvested, 53 percent mature and 39 percent in the dent stage. This is ahead of last year's two percent harvested and 48 percent mature. Ensilage harvest at 60 percent is also ahead of the 55 percent in 1974.

Plows are still idle waiting for dry soil. Plowing is only 60 percent complete compared to 77 percent in 1974.

Some small grains were sown last week mostly in the north. Barley is now 76 percent sown, behind last year's 81 percent. Wheat sowing at 58 percent complete is on par with 1974.

Weather conditions prevented hay curing and what little was made was of poor quality.

In the United States as of September 28, cool weather slowed crop maturity over the major growing areas. Seeding of winter wheat was 37 percent done. Corn for grain harvested was 11 percent, ahead of the eight percent in 1974. Harvest of soybeans was eight percent complete, ahead of 1974. Potato digging in Aroostock County, Maine, was in full swing. Potato harvest was five percent complete in Idaho, 54 percent in North Dakota and 55 percent in Minnesota.

This implement chewed up a lot of ground in a hurry at the Farm Progress Show last week. Taking a bite which was more than 50 feet wide, the chisel-harrow folded in four places during transport.

York County gal exhibits lamb

The York County 4-H Lamb Club held its first Lamb Roundup at the Sechrist Auction, Stewartstown, on Monday, October 6. The ten 4-H members exhibited 17 lambs which were judged by Terry Shearer, Farm Manager for Pigeon Hill Farms, Abosttstown and George Dutrey, Farm Manager for Warrington Green Farms, Wellsville.

The show winners were:

Class 1 - Laurie Dobrosky, Glen Rock R2; Mike Arendt, Glen Rock R3; Tim Flory, Red Lion R4; Stewart Schott, East Berlin, R1.

Class 2 - Lisa Dobrosky, Glen Rock R2; Laurie Dobrosky, Glen Rock, R2; Donna Arendt, Glen Rock R3; Tim Flory, Red Lion R4; Tim Flory, Red Lion R4.

Class 3 - Laurie Dobrosky, Glen Rock R2, Champion; Mark Ebaugh, Delta R2, Reserve Champion; Brian Bankert, Hanover; Donna Arendt, Glen Rock R3; Tom Muller, Delta R2.

Class 4 - Tom Muller, Delta R2; Linda Ebaugh, Delta R2; Tom Muller, Delta R2.

The Grand Champion was a 95 lb. Crossbred shown by Laurie Dobrosky, Glen Rock R2, and sold to Yost Markets, Littlestown, Pa. for $1.26 a pound. The Reserve Grand Champion was a 95 lb. Crossbred shown by Mark Ebaugh, Delta R2, and was sold to J. L. Miller, York R8 for $1.00 a pound.

The 17 lambs averaged 91.5 lbs. per head and sold for $78.04 per hundredweight. The remaining 15 lambs without the champion and reserve champion averaged $63.56 per hundredweight. Yost Market at Littlestown was the largest buyer buying 11 head out of the 17. Other buyers were Thomas Butchers, Hungerford; Ray Mumert, Glen Rock; E. Jordan, Stewartstown; and Sechrist Auction, Stewartstown.

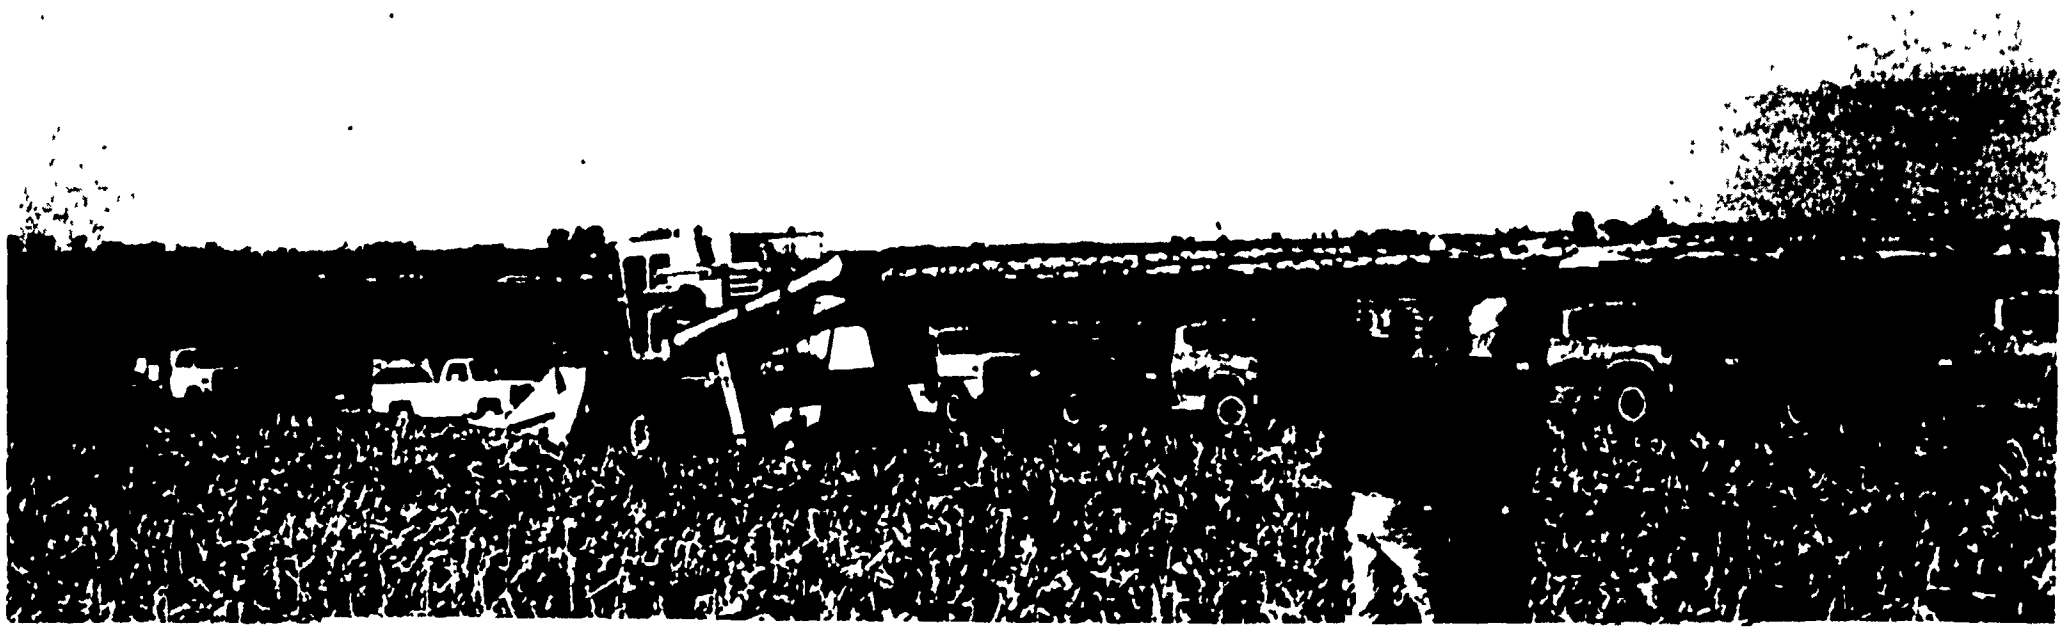
Midwest farm show cost



By Dieter Krieg

MALTA, Ill. - We had to get up fairly early in the morning (5:15 to be exact) in order to beat the crowds to the Farm Progress Show which was held here last week. Reports from the previous day's activities indicated that 75,000 people had visited the show in spite of rain and mud, and the line of cars and buses waiting to get to it streched out for seven miles at one point.

The group of farmers from this area - who went along on a two-day tour sponsored by Penn-Jersey Harvestore - arrived at the site shortly before 8:00 a.m. amidst small patches of morning fog, cool air, and plenty of sunshine. The 1,100 acre James Willrett farm, site of the 23rd annual Farm Progress show, was already bustling with activity as onlookers swarmed out to the fields and 50-acre fairground. More than a dozen private airplanes were in the air at any given moment, making their approach to the landing strip which had been provided by show managers. The flying farmers kept on coming in a steady stream for the next two hours, sometimes touching down at the landing site at a rate of five per minute.

To give readers of Lancaster Farming an idea of the size of the show, here are some "yardsticks" to go by:

The Chicago Tribune devoted its entire back page of its October 1 issue to the event, calling it a farm supershow.

The U.S. Postal Service set up a post office at the fairgrounds.

The Good Year blimp flew overhead.

Hundreds of airplanes and campers arrived - to say nothing about the many buses and thousands of cars. The Federal Aviation Administration was present at the radio control tower to supervise landings.

Hugh Doyle, who manned the temporary airstrip control facilities on the Willrett farm, told reporters that some 500 airplanes landed on the farm Tuesday - sometimes as frequently as one every 10 seconds. A veteran control tower employee at the nearby Rockford airport, Doyle compared the air traffic to that of O'Hare Field in Chicago. He commented that a few "hairy situations" came up from time to time as planes landed one after another, but no mishaps occurred. "Our main problems are the Harvestores and low power lines to the approach, and the ditch at the end of the runway," he was quoted as saying.

The Morning Star, a Rockford, Ill. daily, began its coverage on the first day of the show on page one and then spilled it to the inside to take up an entire page.

The complete name of the annual event is the "Prairie Farmer Farm Progress Show," because Prairie Farmer magazine organizes the event. Although the show is supposedly strictly for promoting agriculture, many of the exhibitors went out of their way to attract attention by way of entertainment. There were no rides and shooting booths, but there was somewhat of a carnival atmosphere just the same. Bands played, singers sang, visitors played games such as Bingo, and there was even a lottery and a Spanish dancer.

One amazing tiller-planter seen at the show was prototype model developed by Harold Crow of Milford, Ill. It was said to allow a farmer to prepare and plant more than 80 acres per day.

The equipment at the show not only demonstrated mechanical and engineering advancements in farming, but also offered visitors a glimpse of the latest technologies. For someone not familiar with farming today, or farming in the Midwest, it "was unbelievable," to use the words of 76-year old farmer who had farmed nearly all his life near Manhattan, Kansas.

Not to be distracted from their business, Midwestern farmers were kept up to date on the latest happenings at the Chicago Board of Trade, simply by entertaining one of several tents which offered market reports as an extra attractions.

While eastern fairs usually have large tents shared by several exhibitors, the Farm Progress Show had one tent per exhibitor. And often times that wasn't enough so arenas, complete with

$5 million to produce

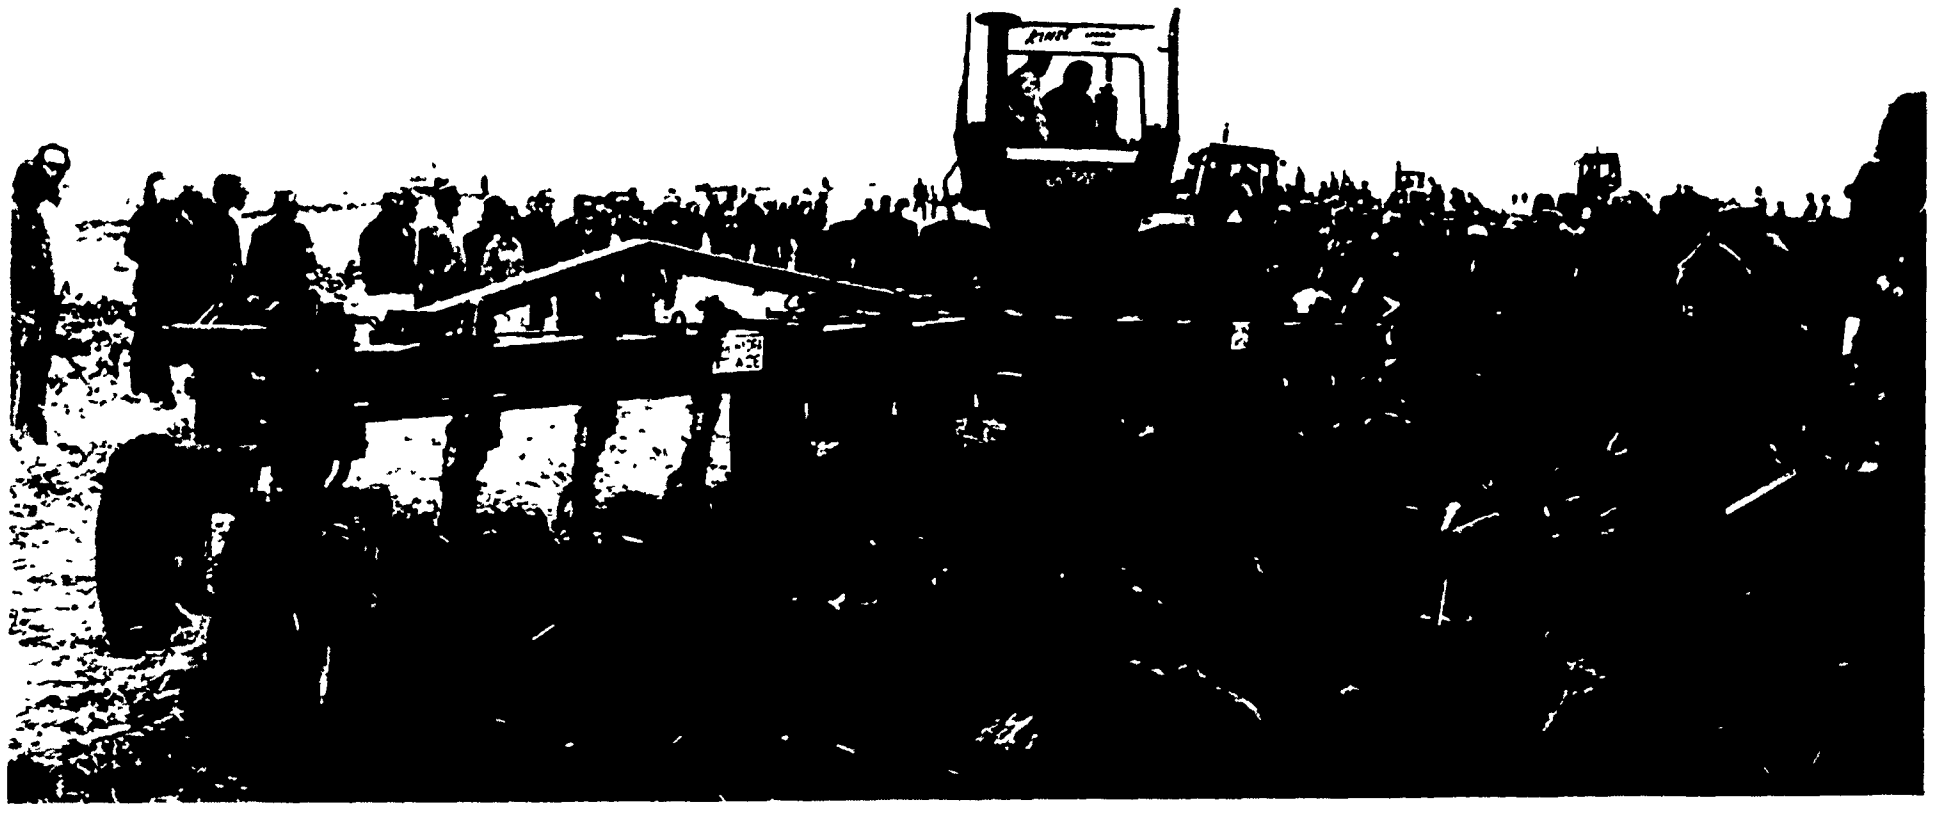
grandstands were built. Several companies brought in live entertainment.

In short, it was an awesome affair if the visitor had never attended one of these shows before.

The Farm Progress Show is billed as the largest, most sophisticated farm exhibition in North America - which probably also means it's the largest of its kind in the world. What the visitor sees is what makes American agriculture great - and capable of feeding so much of the world.

More than $50 million worth of equipment was on display. Besides that, onlookers also had opportunities to see many brands and varieties of corn; different methods of tilling the soil; weed control programs; and much more. Demonstration plots contained 400 varieties of corn and 125 varieties of soybeans.

Sponsored by Prairie Farmer magazine, a midwestern farm publication, the show costs an estimated five million dollars to put on. That figure includes the cost involved in erecting the fairgrounds which was intersected by 12 "streets" and one "avenue" going in the opposite directions.



Fourteen bottoms (count'em), and 18-inch bottoms at that. The huge rig was pulled by an Iowa tractor, reportedly "home-made" which developed 600 horsepower. With one Detroit diesel engine over each axle, the tractor was equipped with eight huge tires. Thousands of people lined the fields at the James Willrett farm to see it and hundreds of other machines in action at the Ag Progress Show.

Self-propelled and pull-type forage harvesters attacked fields of corn in this fashion. But it couldn't go on like that for long. Even with nine silos on the farm, the fellows who did the unloading just couldn't keep up

Fields at the James Willrett farm, site of this year's Farm Progress Show, were bustling with activity during Tuesday, Wednesday, and Thursday of last week. Equipment was demonstrated in the field rather than simply displayed on the 50-acre fairgrounds.

Lancaster Farming Photos

Whiteford youth wins regional tractor contest

COLLEGE PARK - For the eighth time in its 25-year history, a Maryland 4-H youth has won the regional tractor operators contest, held this year in conjunction with the first annual Eastern U.S. 4-H Engineering Event during the Atlantic Rural Exposition last month at Richmond, Va.

This year's winner of the Guy W. Gienger award for tractor-driving skill and knowledge was David Stewart, 19, of Whiteford (Harford county), son of Mr. and Mrs. Edward Stewart. Young Stewart lives with his parents on a dairy and crop farm near the Mason-Dixon Line in northeast Maryland.

By coincidence, the last Maryland winner of the regional 4-H tractor operators contest was also a Harford county representative. He was Herbert Harkins of Forest Hill, who won the event in 1969. Other Maryland wins occured in 1967, 1964, 1957, 1955, 1952, and 1951.

The regional event was begun in 1950 under the leadership of the late Guy W. Gienger, former Extension safety and farm machinery specialist at the University W. Gienger, former Extension safety and farm machinery specialist at the University of Maryland in College Park. Since 1970, the winner's trophy has been named in his memory.

Other competitive activities during the Eastern U.S. 4-H Engineering Event at Richmond, Va., on Sept. 23 included a small engines contest and an automotive care and safety contest. Some 21 states were represented in one or more of the three contests, with 18 participants in the tractor competition.

Brian Graybill, 18, of Taneytown (Carroll County) was fifth in the small engines division.

And Maryland's representatives in 4-H automotive care and safety placed about in the middle of the pack, according to Dr. Lee P. Grant, Extension specialist in 4-H and youth mechanical programs at the University of Maryland in College Park.

The automotives contestants from the Old Line State were Gary Graybill, 16, (Brian's brother), also of Taneytown (Carroll county), and Marta Markline, 17, of White Hall (Harford county).

Nineteen-year-old David Stewart of Whiteford, Maryland, won the 25th annual tractor operators safety and driving contest last month during the first annual Eastern U.S. 4-H Engineering Event at Richmond, Virginia. He competed in a field of 16 state representatives.

* * *

It has been estimated that the breeder can save the consuming public $21 billion over a 35-year period in electricity costs if it is introduced on schedule

ASC committeemen to be elected

Farmers are asked to nominate candidates of their choice to be on the ASC community committee ballot, says John Stick.

The ASCS community committee election will be conducted from Nov. 21 to Dec. 1, by mail ballot. The six ASC communities in Lebanon county are: 1. Heidelberg and Millcreek twps.; 2. South Lebanon, North Lebanon, North Cornwall, West Cornwall twps and Cornwall Borough; 3. South Annville, North Annville, South Londonderry and North Londonderry twps; 5. Union, Swatara and East Hanover; 7. Bethel Twp. 8. Jackson Twp.

ASC committees are responsible for managing government farm porgramson the on the local level. To meet the needs of individual producers, ASC committee members must be concerned and responsible individuals, Stick said. Lebanon county farmers have the opportunity to nominate persons they feel would best serve the farm community. Farmers will soon receive petition forms by mail and may begin submittimg them to the county ASCS office on October2.

A few basic considerations should be kept in mind when circulating petitions, Mr. Stick said. In order to be valid, petitions must be limited to one nominee each, must include written certification that the nominee is willing to serve if elected, must be signed by at least three eligible farm voters in the ASC community, and must be received in the county ASCS office no later than October 28.

A farmer may circulate or sign nominating petitions for as many candidates as he chooses. Anyone wishing to nominate a farmer for the ASC committee election may contact the county ASCS office for full details, including eligibility requirements for office holders. Mr. Stick believes that farmer nominations of candidates for the upcoming ASC committee election are very important. He said, "Farmers should petition and elect those individuals they feel would do a good job as ASC committeemen. The election of concerned farmers to positions on ASC committees is necsessary for good administration of farm programs."

Mr. Stick further explained that the county ASCS office welcomes all valid petitions. The opportunity to nominate, vote, and be elected to office is guaranteed to all farmers regardless or race, religion, sex, color, or national origin.

THE GOOD WORD from the Bible

For so hath the Lord commanded us, saying, I have set thee to be a light of the Gentiles, that thou shouldest be for salvation unto the ends of the earth.

And when the Gentiles heard this, they were glad, and glorified the word of the Lord: and as many as were ordained to eternal life, believed.

4-H conservationists look ahead to year 2000

CHICAGO - Although America's land and water supplies seem assured until at least the year 2000, the nation no longer can afford to take its resources for granted, say U.S. Department of Agriculture scientists.

Increasingly, Americans have come to realize that farm, range and woodlands, soil, water, wildlife and air are not inexhaustible. Among those concerned about resources for the future are more than a half million young people 9-19 in the national 4-H conservation of natural resources program sponsored by John Deere.

Under the supervision of the Cooperative Extension Service, 4-H members learn how to use resources intelligently today in order to meet tomorrow's needs.

4-H'ers initiate and provide leadership in community conservation campaigns. They develop nature trails to stimulate public awareness and appreciation of woodlands, wildlife and streams. Or get involved in helping control soil erosion and air pollution.

Individually and in clubs, 4-H'ers are eligible for awards donated by John Deere and arranged by the National 4-H Service Committee. Award winners are chosen by the Extension Service on the basis of their accomplishments in conservation projects and activities.

In each county conducting a 4-H conservation program, John Deere offers up to four medals of honor to members and as many as four certificates to local clubs. On the state level, a maximum of 10 clubs can win certificates and one county is eligible for a $50 award for the best conservation program.

One 4-H'er from each state receives an expense-paid trip to the 54th National 4-H Congress, Nov. 30 +Dec. 4 in Chicago. During the Congress, six national winners are awarded college scholarships of $1,000.

More information on the national 4-H conservation of natural resources program is available from county extension agents.

Farmers equity climbs to record 438 billion

WASHINGTON - Spiraling farmland and equipment prices bolstered the equity position of farmers by $36 billion last year, to a record $438 billion, according to a report released today by the U.S. Department of Agriculture (USDA).

"The Balance Sheet of the Farming Sector," an annual report of USDA's Economic Research Service (ERS), said that last year farmers made a return of nearly 6 percent on their equity in production assets. This rate of return was well below the rate of 1973 but substantially higher than in other recent years.

The equity increase during 1974 was the net result of a $44 billion gain in the assets owned by farmers but only an $8 billion rise in the debt they owed. While lower prices depressed the asset value of livestock held on Jan. 1, price rises inflated the value of farmland and of equipment and motor vehicles, and pushed total farm assets to $520 billion.

Farm debt outstanding on Jan. 1, 1975, hit $82 billion, reflecting increased borrowing for both real estate and nonreal estate purposes. The farm debt series has been revised downward for the last several years because data now available from a 1971 survey conducted by the Bureau of the Census show that farmers owe less to individuals and others (principally merchants and dealers) than previously estimated. An explanatory publication will be published this fall by ERS.

A single copy of the "The Balance Sheet of the Farming Sector," SB-389, is available free on postcard (please include zipcode) or telephone (202-447-7255) request from the Publications Unit, Economic Research Service, Room 0054-South Building, U.S. Department of Agriculture, Washington, D.C. 20250.

What's New . . .

AC Power Shift

MILWAUKEE, Wis. - The new power shift option available on Allis-Chalmers Models 7040 and 7060 tractors is described in literature available from the company.

The power shift option provides on-the-go shifting without clutching or stopping, with just one lever.

Six forward speeds, plus reverse, in each of two ranges give a total of 12 working speeds, nine of which are under 10 mph for field work. Speeds range from below 2 mph for PTO use to almost 20 mph for road travel. As an added operator convenience, the power shift is designed to automatically down shift from 5th or 6th speed into 4th simply by depressing the clutch pedal.

For more information concerning the 7040 and 7060 Power Shift, form no. AED 434-7507, contact the Agricultural Equipment Divisions, Allis-Chalmers Corp., Box 512, Milwaukee, Wis., 53201.

Anthracnose Fighter

LANDISVILLE, Pa. - Blending three resistant alfalfa varieties is a new idea from Hoffman Seeds, Inc., for fighting anthracnose.

The combination, known as R-A3 Brand, is being marketed by the company for the first time this year. Officials report the blend dovetails the advantages of three high-performance anthracnose - resistant alfalfas.

No single alfalfa variety earns top ratings against all alfalfa disease, soil and weather problems, spokesmen for the seed firm pointed out. Even where anthracnose is not a serious problem therefore, three good strains should give a range of adaptability to deal with these obstacles. Hoffman expects R-A3 Brand will prove useful from Virginia and West Virginia north to the southern portion of New York State.

Cultural Practices Help Control Diseases

Some cultural practices which farmers can use to help control plant disease include crop rotation, deep plowing, sanitation and removal of diseased plants reminds Dr. Donald H Petersen, Extension plant pathologist, The Pennsylvania State University. Other preventive practices include proper planting location, time of planting seedbed preparation, plant spacing and nutrition.

6 ways your Crop Care® dealer helps you make better crop profits:

To help you farm better, and make more money, your Crop Care dealer offers the following services

1 Complete, accurate, soil testing service. Your Certified Crop Care dealer will take your soil samples and send them for you to a leading soil analysis laboratory The laboratory soil analysis and computerized fertilizer recommendations will be delivered to you

2 Plant Analysis. Your Crop Care dealer will help you take samples, and handle all details, up to and including delivering to you the printed analysis of the nutrient uptake of your plants This service pinpoints deficiencies in uptake of nutrients, particularly minor elements, such as zinc, boron, etc

3 One-source responsibility for your farm chemicals Your Certified Crop Care dealer offers weed and pest control programs, as well as fertilization of your crop land In some instances, your Crop Care dealer may render a complete range of services from seed corn all the way through drying corn at harvest time

4 Full measure. You will receive certification that guarantees your getting full weight or volume of fertilizer, or other farm chemicals, you order from your Crop Care dealer

5 Professional counsel. Your Crop Care dealer is well informed on agronomy He attends forums that keep him up-to-date on the latest crop care techniques Your Crop Care dealer is a central source of information about successful farming ideas used in your area And he can draw on the experiences and techniques of other Crop Care dealers in the network

6 Skilled, professional application. As a part of his total Crop Care service, your dealer offers custom application of fertilizer and other farm chemicals Application may be made by one of your Crop Care dealer crews, or he may arrange for application by an independent applicator

The services your Crop Care dealer offers are designed to help you get maximum yield, and to free up your time to do what you do best **Manage.** Nobody can manage your farming operation like you Your Certified Crop Care dealer can provide professional advice and services to help you do it **better.**

Remember, you get Certified Crop Care Center services **only** where you see this sign

Milk price increases explained

WASHINGTON — When U.S. Secretary of Agriculture announced the increased support prices for manufacturing milk last week, he gave the following explanation:

"The decision to raise the support price is based on a thorough review of the dairy situation."

Milk production this marketing year has consistently been below that of a year ago, while consumption of milk and dairy products has increased steadily. Consequently, dairy products have been in short supply in recent months. With short supplies, market prices of milk and dairy products in recent weeks have been substantially above current support levels; however, Secretary Butz said last week's increase was necessary to give producers the assurance they need to stay in dairying and insure adequate supplies.

The Secretary stated that the higher support will have no effect on current retail prices of milk and dairy products. Wholesale product prices already are above the level of support. Therefore retail prices are expected to increase during the next few months even without an increase in support, and to decline relatively little during the last quarter of the year when wholesale prices are expected to drop.

The prices CCC will pay for butter, nonfat dry milk, and cheese, in order to carry out the new level of support for milk, are shown in the following data. The price at which CCC will sell nonfat dry milk back to the industry for unrestricted use has also been increased, in keeping with the Department's policy of setting sales prices of butter, cheese and nonfat dry milk at approximately 115 percent of CCC's current purchase prices. At present nonfat dry milk is the only dairy product available for sale for unrestricted use. (See press release No. 2876-75 issued today.)

Support Purchase Prices for Dairy Products

	Produced before October 2, 1975	Produced on or after October 2, 1975
	cents per lb.	
Cheddar Cheese, U.S. Grade A or higher standard moisture basis	79.25	85.00
Nonfat dry milk (spray) U.S. Extra Grade (but not more than 3.5 percent moisture):		
50-pound bags	60.60	62.40
Butter, U.S. Grade A or higher:		
New York, N.Y., and Jersey City, Newark, and Sacaucas, New Jersey	70.75	81.25

The price of butter located at any other point will be the price at New York, less 80 percent of the lowest published domestic railroad freight rate per pound gross weight for a 60,000 pound carlot, in effect on April 1 of each marketing year, from such other point to the designated market named by the seller. However, beginning Oct. 2, 1975, no price at any location shall be less than 78.25 cents per pound.

Tax workshop set

Every year more people seek assistance in income tax preparation. The Cooperative Extension office is offering a tax preparation workshop on October 21-23 at the Lancaster Farm and Home Center. The workshop is designed for individuals and tax practioners who wish to improve their ability to more accurately prepare farm tax returns.

The workshop will include instructions on both individual reporting and business. It will include reporting income, expenses, depreciation (methods, rates, and additional first year), long and short term gains, and investment tax credit.

It will include instructions for all new tax law changes, including new individual tax credit, standard deductions, child care deductions and many more.

A registration fee will be charged to cover materials and lunches. Reservations will be accepted on a first come basis.

For more detail write to the Cooperative Extension Service, 235 West Market Street, West Chester, Pa. 19380 or call 215-696-3500. Ask for a program and application.

MCMP schedules district meets

BALTIMORE - Districts and of Maryland Cooperative Milk Producers, Inc. will hold annual membership meetings on October 14 and 15, respectively. Both meetings will begin at 7:00 p.m. District 7 (York County) will meet on Tuesday at the Centre Presbyterian Church, New Park,. District 7, (Cecil County, Md. and Chester and Lancaster Counties, Pa.) will meet Wednesday at Johnies Resturant, North East, Md.

Emory M. Kilgore, Airville, serves as director representing York County members on the cooperative's 18-man Board of Directors. F. Guy McGrady, Rising Sun, serves in that capacity for District 6 members. The terms of both of these men expire in March of 1976 and election will be held during the district's meetings to serve on the board for the next three years.

In 1974 the MCMP marketed 574 million pounds of milk with a total value of more than 52 million dollars. The 80 York County members of the Cooperative marketed 47 million pounds of milk with a value of 4.2 million dollars.

The York County members are located in an area where almost all of their milk is hauled by the milk hauling fleet owned by the MCMP, as well as receiving direct delivery of dairy supplies and equipment, and repair and installation service on dairy equipment. The supply services are provided through the MCMP's Equipment Division which did approximately 1.25 million dollars of business in 1974.

In August, the MCMP marketed 53 million pounds of milk with a total value of more than $4.8 million. During the same month the 63 District 6 members of the Cooperative marketed 3.4 million pounds of milk with a value of $306,000.

Additionally the Cooperative has a quality bonus program of 3 cents per hundredweight paid its members who meet superior quality standards. In August 80 percent of the milk marketed by District 6 members qualified for the quality premium.

Maryland Cooperative Milk Producers, Inc. is a dairy farmer owned milk marketing cooperative with more than 1,000 dairy farmer members located in Maryland, Pennsylvania, West Virginia and Virginia. Recently the Cooperative announced the allocation of $420,000 of operating margins to its patrons representing the remainder of savings on 1974 milk marketing operations. In December 1974 the MCMP made an initial allocation of $238,000. These combined savings amounted to $658,000 equal to 11 and ½ cents per hundredweight on all milk marketed by the Cooperative in 1974.

In addition the Board allocated savings from the Equipment Division operations to members, based on their partonage at that division during 1974. This refund was 2.4 percent of total business done with the division during the year.

During the meeting Oct. 15 the membership will receive reports from its president and business manager covering current information relative to market conditions, Cooperative policy and long range planning together with a review of the financial aspects of the Cooperative's operations thus far in 1975.

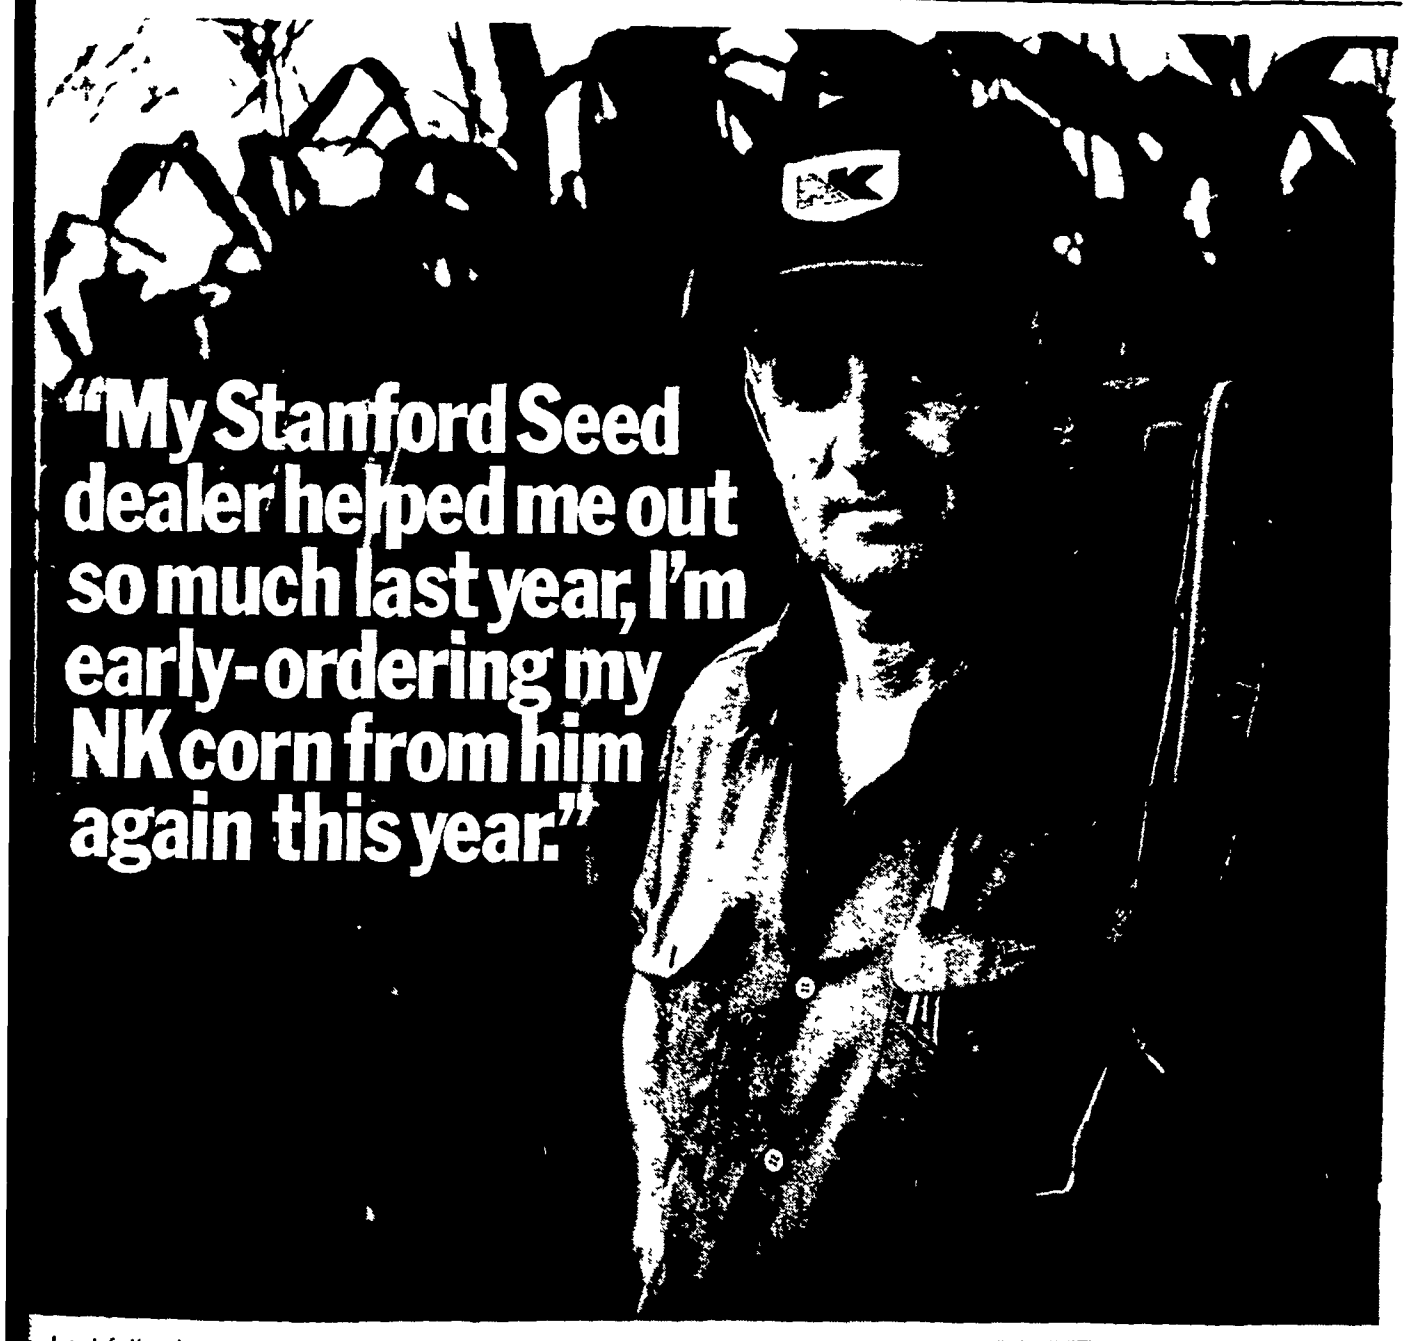
GRUMELLI'S FARM SERVICE

Quarryville, PA 17566 Phone (717) 786-7318



Last fall, when I heard the news from the midwest that supplies of seed corn were going to be short, I knew prices would start climbing I asked my Stanford dealer about it, and he told me that the smartest thing for me to do was to order my NK corn early He told me that the people at Stanford shared my concern about higher prices — and they did something about it They authorized my dealer to give me price protection on my early NK order That meant that if the price of seed corn went up, I would pay the lower early-order price That sounded like more than a fair deal to me, so I ordered early And you know what? The price went up later, saving me $2 50 a bag

That's one of the reasons I'm going back to my Stanford-NK dealer now

Another reason is the big yield potential of Northrup-King hybrids NK corn took more than 80 first-place N C G A state championships in the last six years

To me, that's convincing proof that NK hybrids are exactly what we need to get those high-profit yields from our corn acreage

My choice this year is NK's PX76 — the next great hybrid for my area For two years, it has been the most consistent high yielder in NK trials across the mid-Atlantic region You might need a mid-season corn on your farm, like PX 50A for grain or silage — or PX 20, an early corn with excellent standability, early spring vigor and fast dry-down

On top of a high-yielding NK corn hybrid, the kind of help I need now is in straight cash savings So I'm ordering my NK corn early again — this time to cash in on Stanford's big new early-order, early-pay discount deal

I like doing business with people who are always there with the kind of help I can really use That's why I'm staying with my Stanford dealer and NK corn

New, higher
EARLY ORDER, EARLY PAY DEAL
Here's how to get bigger savings!

- **Order before October 15, and save a buck a bag**
- **Order 10 bags or more for quantity discount**
- **Pay early and save even more**

1-row Superpicker... low cost way to harvest your corn

Hour after hour, acre after acre you'll get non-stop plug-free picking, in all kinds of corn with a 1-row Superpicker.

The big, hungry gathering unit picks clean, even in down and tangled corn. Flexi-Finger presser wheels on the long, 6-roll husking bed keep ears moving fast, even in the heaviest yields, and deliver clean, whole ears to your wagon.

Before you buy, take a good look at this Superpicker ... it combines the capacity you want with the non-stop performance you need for fast, clean, profitable corn harvesting.

Pliny's *Natural History* stated that eating five almonds permitted one to drink without experiencing intoxication.

Hauling discounts considered

LANCASTER — Officers and delegates of Inter-State District 7 met here at the Stock Yards Inn last Monday for their annual meeting to hear their General Manager, James Honan, speak on the latest developments in milk pricing and developments as a result of the recent restructuring of the Federal Order 4 marketing area. Details on that were presented in the story beginning on page one.

During the meeting it was brought up that the cooperative's hauling system should be reviewed and special consideration should be given to large producers. The proposal says, in effect, that there is a need to consolidate routes and eliminate overlaps; a uniform stop charge should be levied; and discounts should be offered to producers who ship more than 3,000 pounds of milk per day.

The proposal, although not formally acted upon at the meeting, received support and opposition. Officers were asked to study the matter and make their decision known at the annual meeting. It was noted that similar measures have been defeated in previous meetings because small producers outnumber large producers.

The hauling business has apparently become so competitive, however, that Inter-State leaders fear their large shippers will be lost if and when other cooperatives offer cheaper hauling rates. When that happens, they warn, the small shippers will end up paying more because up until that point the large shippers had kept routes profitable. The idea is to offer large shippers a discount starting at one cent per hundredweight if they ship more than 3,000 pounds of milk per day but less than 5,001. The scale of discounts increases gradually until it reaches a peak of five cents for volumes exceeding 14,001 pounds of milk per day.

In other actions taken at the meeting, an election of two new officers was held to fill the terms of two officials who went into other districts as a result of the reapportionment of Inter-State districts. Chosen as vice-president of District 7 was Lester Hawthorne, while the post of secretary-treasurer went to Earl Stauffer.

As a result of the reapportionment, Inter-State districts have approximately 150 members each, whereas before some had as few as 50 while others had 250. The changes were required to conform with legal requirements for bonafide cooperatives.

The question was raised as to what would be done with the treasuries of those districts which find themselves affected by redistricting. Allocations will be proportioned according to membership, the group was informed.

Short courses offered at Penn State

Pest Management and Environmental Quality Correspondence Course

The basic principles of pest management and their application to improving the environment are included in Correspondence Course 181, Pest Management and Environmental Quality.

The 11-lesson course discusses management practices in control of common insects and mites. Weed control, formulations and toxicity of pesticides, how to read a pesticide label, pesticide safety, and other items which contribute to pest control and a cleaner and safer environment.

Although the course was written for Pennsylvanians who want to be certified as Private or Commercial Applicators or restricted use pesticides, any individual can enroll. Non-Pennsylvanians cannot be certified but will receive a Course Examination. Pennsylvanians who do not desire certification also will receive the Course Examination.

The Private Applicator Examination of The Pennsylvania Department of Agriculture will be forwarded with the course to Pennsylvanians desiring certification. A special application form is necessary; it can be secured from any County Agent office.

To enroll in the course, send a check in the amount of $6.00, payable to The Pennsylvania State University, to Course 181, 307 Agricultural Administration Building, University Park, Pa., 16802.

Farm Income Tax And Social Security Social Security Short Course

The annual Farm Income Tax and Social Security Short Course for 1975 will be held from December 8 to 12 on the main campus of The Pennsylvania State University.

The 1975 Farm Income Tax and Social Security Short Course has been completely revised to include tax developments as they pertain to child care, self-employed retirement, and the annual employer's return.

Members of the Internal Revenue Service and Social Security Administration will join University staff in discussing filing requirements, reporting depreciation, treatment of other income, completing the 1040, Social Security, prorating expenses, filing corrected returns, net operating loss, capital gains and losses, investment tax credit, changes in income averaging, special tax matters, involuntary conversion, balance sheet, Pennsylvania corporation tax, preparing for an informal audit, and how to be a good tax practitioner. Special emphasis will be placed on Public Law 94-12 (Retirement Plans HR-10 and IRA) and itemized and standard Deductions.

The registration fee is $40 for Pennsylvanians and $45 for non-Pennsylvanians. Please do not pay in advance; fee is payable at registration time on December 8, 1975.

Advance application is desirable since facilities may limit the number accepted for the course.

Application blanks and a dairy schedule can be secured from the Director of Short Courses, 306 Agricultural Admin. Building, The Pennsylvania State University, University Park, Pa 16802, or from your local county agent.

Ice Cream Short Course

The annual Ice Cream Short Course of The Pennsylvania State University will be held January 12-22, 1976. Lectures, demonstrations, laboratory practice and visits to large and small ice cream plants are intergrated to provide information about the formulation, manufacture, and distribution of both hard and soft ice cream and ice milk, sherberts, ices, vegetable fat products, and other types of frozen desserts. Because of the diverse interests and background of the students who attend, course content is broad in scope.

Lectures cover quality problems and their solution, industry trends, formula selection, ingredients, equipment, mix processing, freezing, aeration, hardening, and storage. Instruction and practice are given in the procedures involved in mix calculations. Approximately 40 frozen dessert samples will be prepared, evaluated, and compared to commercial products purchased through normal channels of distribution.

Previous experience in the ice cream industry is not required. A typical class includes representatives from the largest ice cream companies to small family businesses, soft serve operations, and sales and technical personnel from allied industries. Students come from throughout the United States, and several foreign countries are usually represented.

The registration fee, which included field trip transportation costs, is $50 for Pennsylvanians and $60 for non-Pennsylvanians.
Enrollment is limited to 45 students.

Application blanks and further information can be secured from the Director of Short Courses, 306 Ag. Admin. Bldg., University Park, Pa. 16802.

Berks Co. farmers group hold dinner

The Berks County Farmers Association observed its 25th anniversary at a dinner meeting recently held at the Vo-Tech East School, Oley. (To be a member of the organization ones principal business must be farming.) This anniversary represents a continuous growth in numbers and activities for the 25 years. Over one-half of the people engaged in agriculture in Berks Co. are members of the group.

Mr. William Myer, Myerstown R1, president, presided at the affair. The four men who organized this group are:

Mr. Alvin Derr, Alburtis, Pa.; Webster Fetterman, Barto; Owen Gerhard, Ball; John Grubb, Bechtelsville; Alan Schantz, Barto.

Members for 25 years (each was given a certificate):

Paul Anthony, Strausstown; Curtis R. Bashore, Bethel; Stanley Fox, Palm; Horace Hoffman, Barto; Ernest Johnson and sons, Boyertown; Lloyd Masemore, Barto; Andrew Schertel, Barto; Lawrence Schoenly, Barto.

Mr. Melvin Hoffman, Leesport; Mr. John Grubb, Palm; and Mr. William Moore, Myerstown were honored as past presidents of the organization.

Mr. Albert Trexler, Executive director of the Berks Co. Soil Conservation Service was recognized for his outstanding assistance and contribution to the association in the conservation of our natural resources.

The policy development process of Pennsylvania Farmers Assoc. which is affiliated with Farm Bureau, starts at the local level and at this meeting 32 policies were read, discussed and voted on by the general membership. These are submitted to the state office and will be voted on at the state annual meeting to be held in Pittsburgh Nov. 9-12.

The membership drive will be conducted from now until Jan 1. Mr. Evald Wicks, Strausstown and Mr. Ernest Heckman, Lehartsville are co-chairman.

Gene McDowell, Organizational Regional Director showed slides of farm operations in Berks Co. A "Meet the Candidate" night is planned for Oct. 17 at the Berks Co. Agriculture Center.

xxx

Milk Is Regularly Checked

Dairy cooperatives and processors have complete quality control programs to assure consumers that the milk they purchase is free from adulteration, says Sidney E. Barnard, Extension dairy specialist, The Pennsylvania State University. Federal and state regulations require regular checking for antibiotics and pesticides. Dairy farmers follow exact procedures to be sure that milk is not adulterated.

OPEN DAILY 8 AM to 8 PM, SAT. 8 AM to 1 PM

Small game season to open this month

Another surge in Pennsylvania's fall hunting activities will be recorded with the opening of the early small game season and the season on two migratory game bird species on Saturday, October 11.

Squirrel, grouse, Wilson's or jacksnipe and woodcock will be the species that can be hunted on that date. Seasons on most of the other small game species open two weeks later.

Squirrels have probably been the most underharvested small game species in the state for many seasons. Last year, about two million busytails were taken in Pennsylvania, and field reports indicate that there should be a fairly good supply of squirrels this year, with local exceptions.

Some concentrations of grouse can be found throughout the state, and hunters this year may again approach the harvest figure of 225,000 birds taken in 1974.

Local populations of woodcock and snipe provide stimulating opportunities for hunters, and migrating birds add to the hunting excitement associated with these fine game species.

Hunters are permited to take six squirrels daily, and may have twelve in their possession after the opening day of the season. Two grouse may be taken per day, with a possession limit of four after the first day of the season. The daily limit on snipe is eight, with a possession limit of sixteen, while five woodcock may be taken daily, with no more than ten in possession.

The initial season for squirrel and grouse and the season for snipe and woodcock will end on November 29.

Sportsmen will honor Forest Game Cooperators

The Cameron County Federation of Sportsmen's Clubs will honor all of the cooperators in the Pennsylvania Game Commission's Forest Game Program on Saturday, October 11.

The cooperators will be guests of honor at a banquet to be held in the high school in Emporium, starting at 6 p m.

Over half a million acres of forested land in the state are enrolled in the cooperative forest game program. All of this land is open to public hunting In return, the Game Commission provides protection to the private property involved, particularly guarding against road and tree damage and littering

Hunters Selected For Goose Blinds

Reservations have been made by the Pennsylvania Game Commission for 1,630 lucky goose hunters at the Pymatuning Waterfowl and Middle Creek Wildlife Management Areas this year.

Names of 1,000 hunters were drawn for the Pymatuning Waterfowl Area in Crawford County from a record 30,055 applications submitted. Another 630 names were drawn for the Middle Creek Area in Lebanon and Lancaster Counties from 10,634 applications.

Only hunters whose names were drawn were notified by mail. Each goose blind holder is permitted to take three guest hunters to share his or her blind.

A hunter will be permitted only one hunting trip to one of the two areas this year. This restriction will enable more hunters to utilize the areas.

Opening day for goose hunting at Middle Creek will be Thursday, October 16, while goose hunting at the Pymatuning will get underway on Friday, October 17. A shooter will be permitted to take only one goose daily at Middle Creek or Pymatuning.

Hunting hours for the goose shooting areas are from one-half hour before sunrise until noon prevailing time. Exceptions to these hours are: on the opening day of the general small game season, Saturday, October 25, no wild birds or wild animals may be hunted anywhere in Pennsylvania before 9 a.m. Therefore, the opening hour at Pymatuning on October 25 will be 9 a.m. There will be no goose hunting at Middle Creek on October 25.

Shooting days at Middle Creek are Tuesdays, Thursdays and Saturdays, while Pymatuning shooting days are Mondays, Wednesdays, Fridays and Saturdays.

Hunters who are assigned blinds will be given copies of the special regulations which apply. All state and federal rules governing the taking of waterfowl will be in effect.

The first applications drawn at Middle Creek were those of Josiah Beiler of Kinzer, Charles Gambler of Lebanon, Richard Luz of Trevose, Paul L. Hess Jr. of Denver and William R. Buhrman of Phoenixville.

The first woman's application drawn was that of Margaret S. Leiphart of York, and the first nonresident whose application was drawn was John F. Vogt of Eldred, N Y.

At Pymatuning, the first applications drawn were those of Frank J. Gagliardo of New Castle, Fred Gentile of Youngstown, Ohio, and James Hajdak of Greenville. The first woman's application drawn at Pymatuning was that of Judith Grogg of Harmony.

Goose shooting will end at Middle Creek on December 4, while hunting for geese will terminate at the Pymatuning on December 6.

Game Lands Tour Cancelled

The public tour of State Game Lands 211 in Dauphin and Lebanon Counties, originally scheduled for Sunday, October 12, has been cancelled for this year. Hurricane Eloise rains have damaged the roadbed through the game lands.

Keystone dairy team takes second place

COLUMBUS, Ohio - Pennsylvania's 4-H Dairy Judging Club won second place at the National 4-H Dairy Cattle Judging Contest held here on October 6.

Members of the judging team were: Richard Mellinger, RD1, Strasburg; Dale Olver, RD1, Honesdale; Judy Smith, RD1, Tyrone; and Cindy Rutter, 53 Lightner Road, York.

In all, 140 4-H members from 35 states participated in the national contest. The team from Kentucky won first place.

The Pennsylvania team was coached by W. Paul Anderson, Extension dairy specialist at Penn State University and David Norman, York County Extension agent.

In addition to scoring second place in the overall contest, the Pennsylvania 4-H Dairy Judging team scored first in judging Holsteins.

Richard Mellinger ranked as the third highest individual in the overall contest; first in the contest for giving all reasons, and second in giving oral reasons.

Dale Olver ranked first in giving oral reasons.

Anderson says the contestants were required to judge Ayrshire, Brown Swiss, Guernsey, Holstein and Jersey breeds including a class of heifers and a class of cows in each breed.

Contestants justified their placings on each cow class with either oral or written reasons.

xxx

Safe-Keeping for Insurance Policies

Keep insurance policies in a place where beneficiaries can easily locate them in the event of the insured's death. Extension home management specialists at The Pennsylvania State University suggest attaching the name of the agent to notify on the policy. This will help speed the settlement process.

xxx

More Light

Dirty electric bulbs give twenty percent less light than new or clean ones. To clean them, Extension home management specialists at The Pennsylvania State University say first disconnect the lamp. The wipe the bulb carefully with a cloth wrung out in sudsy warm water. Avoid getting the metal base of the bulb wet.

Egg-cholestrol studies announced

NEW HOLLAND, PA. - Tests conducted by a UCLA Research Team determined that eating eggs had no effect on plasma cholesterol levels in young and middle-aged men.

It was previously reported that the indigestion of cholesterol results in elevated plasma cholesterol level in two to four weeks. However, most of these studies were either done using systhetic diets or cholesterol-free diets as preliminary to the feeding.

In the UCLA study, healthy male subjects who normally ate eggs and who had "normal" serum cholersterol levels and blood pressures were selected. Two groups were used: Group A consisted of 25 men, average age 23.8 years (range 20 to 28), and Group B consisted of 27 men, average age 50.9 years (range 39-66).

Group A ate two eggs per day for eight weeks whereas Group B ate one egg per day for four weeks then two eegs every other day for four weeks. The eggs were superimposed on the usual diet. For two weeks after the eight week feeding period, all eggs were removed from the diet.

Plasma cholesterol determinations were done on two successive weeks before the egg diets were given; weekly for eight weeks during the egg feeding and thereafter on the egg-free diet. The results indicated that there were no significant differences in average cholesterol levels between any two time periods in either group.

It was concluded that healthy young men eating two eggs a day and healthy middle-aged men eating one egg a day in addition to their usual cholesterol-containing diet showed no significant changes in cholesterol levels over a period of eight weeks.

Members of the Research Team were Drs. Grant G. Slater, James F. Mead, G.A. Dhopeshwarker and Roslyn Alfin-Slater from the School of Public Health, University of California, Los Angeles.

Berks Co. Beef show

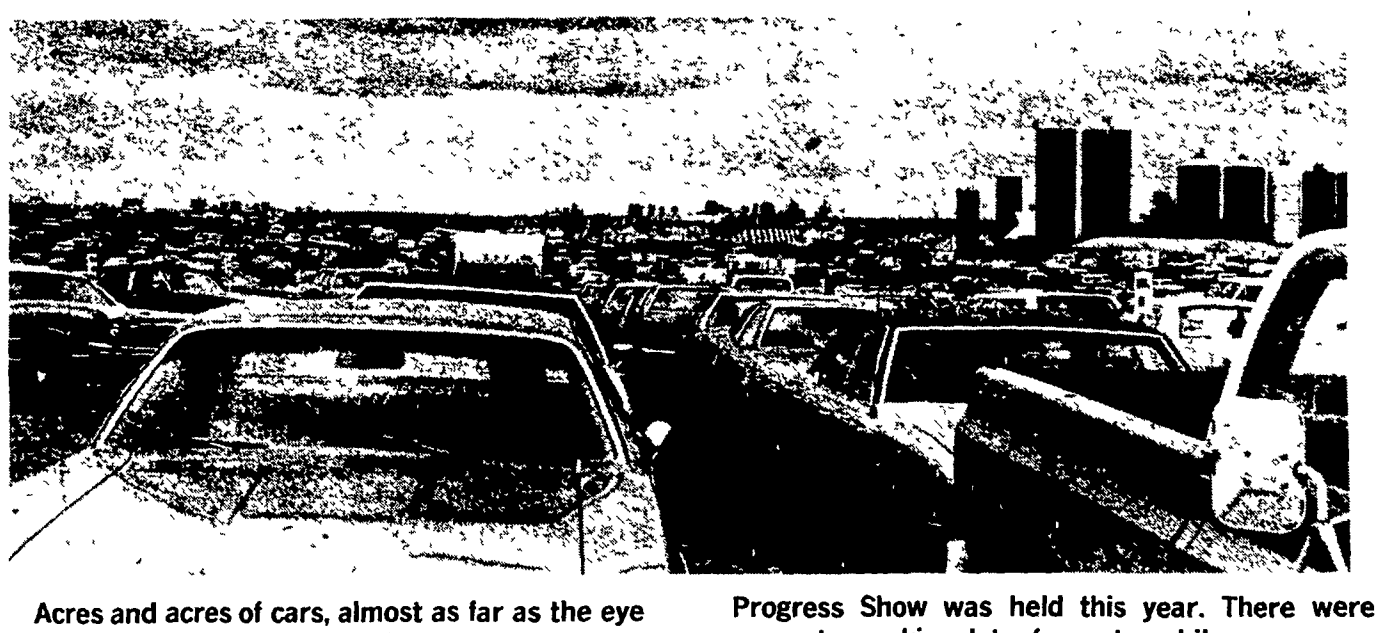
Berks County 4-Hers will hold their annual beef sale on Wednesday, Oct. 15 at the Leesport Auction, Leesport. About 43 head of quality steers are expected to be offered on the block beginning at 3:00 p.m.

A show of the animals will be held prior to the sale beginning at 10:00 a.m. Buyers will be given duplicate ribbons awarded to the club members.

Berks farm society meets

Gathering around the centerpiece at the 24th annual convention of the Berks County Society of Farm Women last Saturday in the Kutztown Grange Hall, are, left to right: Mrs. Robert D. Yanos, Douglassville, county president; Mrs. S. Lee Richards, McConnellsburg, state president; Mrs. Joseph F. Walters, Douglassville, treasurer; and Cathy Yanos, Douglassville, Berks County Dairy Princess. Nearly 160 women attended the convention.

Airplanes and even the Good Year blimp came to the 23rd annual Farm Progress Show which was held on the James Willrett Farm near Malta, Illinois, last week. Equipment manufacturers from all over the country exhibited and demonstrated their machines. The event prompted front page coverage of the Rockford, Illinois paper, and the Chicago Tribune devoted its entire back page to the event. Approximately half a million people visited the three-day show which reportedly had $50-million worth of farm machinery on hand.



Acres and acres of cars, almost as far as the eye could see, were seen in several areas of the James Willrett Farm, where the 23rd annual Farm Progress Show was held this year. There were separate parking lots for automobiles, campers, and even light aircraft.

Tractors and plows at the Farm Progress Show head for another field to demonstrate their efficiency and power to the thousands of onlookers who swarmed to the James Willrett Farm, Malta, Illinois to see them in action. - The show is the largest of its kind in the world. Penn-Jersey Harvestore of New Holland chartered jet and bus transportation to the show, and 100 area farmers took part.

Scanlon named

LANCASTER, Pa. - William M. Scanlon has been named assistant vice president of the National Central Bank international division according to an announcement made today by Robert G. Walton, bank International Division Vice President.

Scanlon will assist Walton in the administration of National Central services to firms which trade or operate overseas.

The new executive comes to National Central from the Export-Import Bank in Washington, D.C., where he was a resident banker. He has also been associated with the Central Cleveland International Bank in New, N.Y., and American Express Interntaional Banking Corporation in New York.

Scanlon earned his bachelors degree in economics at the University of San Farncisco and has completed a variety of professional banking courses. He has received the American Institute of Bankers Advance Certificate in International Finance, and completed training at the Institute of Modern Languages in New York.

He is married to the former Nancy Loman of Savannah, Ga. They live at 142 East Walnut St., Lancaster.

PATZ

MODEL 101 FEEDER AND CONVEYOR

Here s why the 101 is becoming Patz most popular feeder

- Feed can be deposited anywhere along the feeder
- Feed is distributed along the bunk from above by a conveyor with a tapered bottom
- Can be used inside or outside
- Chain and flites move at 117 feet per minute delivering up to 56 bushels of feed to the bunk each minute
- Can elevate feed and convey with optionals
- To fit your requirements the 101 can feed in one or two directions convey and feed in one or two directions or just convey

Feature for feature that s why farmers are selecting the Patz model 101 feeder and conveyor

USDA issues final decision on egg research

A final decision and order that would authorize a nationally coordinated research and promotion program for eggs has been issued by the U. S. Department of Agriculture. The action follows the Aug. 13 Federal Register call for public comments through Sept. 12 on the proposed egg order.

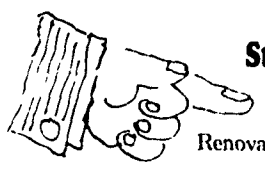
Before the order can be put into effect, it must be voted on by eligible egg producers in the 48 contiguous states. All commercial egg producers owning more than 300 laying hens, except those primarily engaged in the production of hatching eggs, would be eligible to vote in the referendum. What is needed to establish the order is either a two-thirds majority or a simple majority if those voting represent at least two-thirds of the eggs produced by all voters.

If put into operation, the order would authorize an 18-member egg board composed of egg producers or representatives of producers to be appointed by the Secretary of Agriculture. The board would establish projects covering promotion, research and consumer education to increase the general demand for eggs, egg products, and spent-fowl (non-productive laying hens).

Proposed ground rules for conducting the national referendum were announced by USDA Sept. 15. When the proposed ground rules are issued in final form, USDA will announce the dates and details of the referendum.

The order announced in the final decision is basically the same as that given tentative approval in August. The only significant difference is that the section dealing with the powers of the Secretary of Agriculture has been changed to conform with the provisions of similar USDA research and promotion orders.

Notice of the decision and the research and promotion order appeared in the Oct. 1 Federal Register.

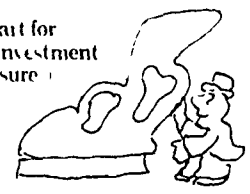


Start with these:

Remodel your barn and raise dogs ☐
Get a big freezer and save on food ☐
Renovate your vacation cottage for rental ☐
Take a second honeymoon ☐
Add a wing to your factory ☐
Remodel your store front ☐

When opportunity strikes.

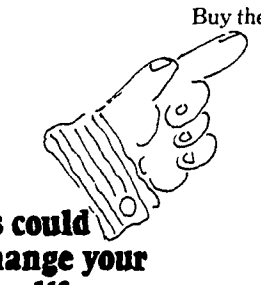
Buy art for investment and pleasure ☐



Install a furnace ☐
Repair and paint the barn and outbuildings ☐
Refurnish your offices ☐
Pay for your youngsters braces ☐
Clear up old bills ☐
Buy new rugs ☐
Convert the barn to apartments ☐
Expand your factory ☐
Take better pictures with a better camera ☐
Tell the tree surgeon to fix 'em up ☐
Mend your fences ☐
Buy a player piano ☐
Buy a pool table ☐
Redo a bathroom—or two ☐
Hook up to the sewer line ☐
Buy additional equipment to fulfill a business order ☐
Invest in trees and shrubbery ☐
Buy antiques to start a business ☐
Upgrade your wardrobe—and the family's ☐
Buy storm windows ☐
Install a patio with a gas grille ☐

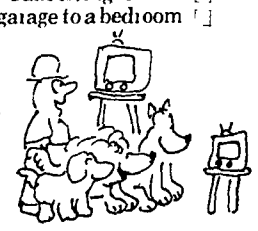
We have the money if you have the ideas.

Borrow for school or college tuition ☐
Pay your taxes without late penalty ☐
Buy a sewing machine and wear what you make ☐
Get yourself that motorcycle ☐
Buy the tools to turn your hobby into a business ☐
Panel the basement or the garage ☐
Take flying lessons ☐
Convert your garage to a bedroom ☐



This could change your life.

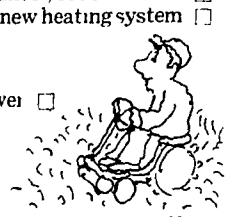
Get a color TV or an extra set ☐



Give your daughter that horse ☐
Borrow against your slow-pay receivables ☐
Buy an antique car or fire engine for investment ☐
Turn part of your house into a profitable apartment ☐
See the U S A in a motor home ☐
Buy that motor boat ☐
Or a small plane ☐
Relocate your company's offices ☐

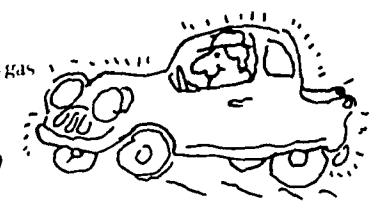
This could make for a happy wife.

Remodel the kitchen, pots and pans and all ☐
Go to cooking school ☐
Re-roof the house—and insulate it, too ☐
Borrow against your future crops ☐
Finance your invention ☐
Install a new heating system ☐



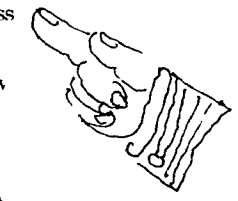
Enjoy a garden tractor and mower ☐
Have a fireplace built or do it yourself ☐
Repave the driveway ☐
Sound-proof your den ☐
Buy skiing equipment ☐
Teachers borrow to travel abroad ☐

☐ Buy a used car, a new car, a *van* car
☐ Buy a smart car . . smart enough to use less gas
☐ Get new tires . . it *is* going to snow



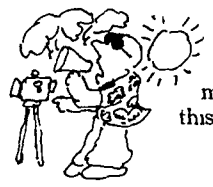
☐ Buy a sailboat you can weekend on
☐ Finance a company aircraft
☐ Buy a tuxedo (and get her an evening dress)
☐ Install a home intercom system
☐ Go to Europe—with the children
☐ Go to Europe—*without* the children
☐ Build a cabana for the pool
☐ Add a bathroom in the basement
☐ Buy a piano or organ
☐ Take an extra week's vacation this year
☐ Get an electric dishwasher
☐ Send your youngster to tech school
☐ Buy new machinery for your plant
☐ Get a great summer deal on a snowmobile
☐ Improve your ham radio rig
☐ Enclose your porch

☐ Buy your son an electric guitar
☐ Soundproof the rec room (it figures')
☐ Build a tennis court—and light it
Construct a gazebo ← **A rare one these days.**
☐ Get a good stereo with a tape deck
☐ Redo the dining room
☐ Train for a second job (or a new occupation)
☐ Buy a first-class rooftop TV antenna
☐ Rewire your home for 100-amp service
☐ Try canoeing—great, quiet exercise
☐ Get a tent, camp stove, sleeping bags
☐ Take some college courses
☐ Treat the family to bowling balls, bags, shoes
☐ Install aluminum siding
☐ Buy up a complete collection of something
☐ Start an advertising campaign for your business
☐ Go hunting in Alaska
☐ Open a branch office
☐ Build separate quarters for your mother-in-law
☐ Buy your young-marrieds a house
☐ If the car runs better than it looks, repaint it
☐ Join a country club
☐ Buy a snowmobile
☐ Beautify your company's building and grounds
☐ Buy an electric typewriter
☐ Buy a retirement home or lot
☐ Build up your rare book collection
☐ Have cash on hand for country auctions
☐ Give your daughter a great wedding
☐ Raise cattle, sheep or hogs
☐ Repaint and re-outfit your boat
☐ Buy new golf clubs and bag



Inspired!

Your mother would be proud.



☐ Get a really good home movie outfit in time for this year's vacation

☐ Buy a water bed
☐ Go fishing in Canada
☐ Get a new shotgun and outfit to match
☐ Install a master bedroom bath

Holstein association receives award

BRATTLEBORO, Vt. — Holstein-Friesian Services, Inc. received the President's "E" Award for Excellence in Exporting during special ceremonies held in Washington, D. C., September 23. HFS, Inc. is the subsidiary of the Holstein-Friesian Association of America.

The award, given in recognition of outstanding efforts to increase U.S. foreign trade, was presented by Secretary of Agriculture Earl L. Butz during a luncheon at Capitol Hill Club. Secretary of Commerce Rogers C. B. Morton certified the award.

Accepting the award certificate were Charles J. Larson, HFS, Inc. executive vice-president and HFAA executive secretary and C. T. Barns, Jr., director of the International Marketing Division. HFAA President Gordon W. Newton, Tatum, South Carolina and Robert H. Rumler, HFAA executive chairman, accepted the "E" flag which will fly in front of HFAA headquarters in Brattleboro.

Attending the presentation ceremony and luncheon were officers and directors of HFAA and HFS, Inc., agricultural and foreign trade leaders from the U. S. Senate and House of Representatives, officials from the Departments of Agriculture and Commerce and the Executive Office of the President. HFAA and HFS, Inc. directors each invited their local senator or congressman to attend as a special guest.

Earlier in the day, members of the Board of Directors of HFS, Inc. met with officials of the Foreign Agricultural Service for a discussion on the "Cooperator Program" of the FAS and the importance of market development funds invested in cooperating agencies, such as HFAA.

Following the award presentation luncheon, HFAA and HFS, Inc. directors examined future Holstein export opportunities with their congressmen.

Surveying the significance of the "E" Award and the recognition offered to HFS, Inc. by the government officials, HFAA Executive Chairman Robert H. Rumler said agricultural exports are viewed by our government as national priorities. Exports serve the foreign trade interests of the nation, they lower per unit cost of farm products and increase employment for consumers and they benefit farmers by offering full production potential and strong, stable markets.

Individual farmers have no practical way to promote their products in foreign markets. So, private trade associations, such as HFAA, have been formed to conduct foreign market development programs on behalf of their members. The government assists trade associations by supplying roughly a third of the $36 million being spent worldwide to develop and maintain export markets. Government assistance is essential, Rumler stated, to ensure continued growth of our commercial exports.

Three Berks Co. youths honored

UNIVERSITY PARK - Three Berks County young adults, who have compiled outstanding records in 4-H work, were named state contest winners in the 1975 4-H National Awards program.

They are Sandy Miller, 18, of R2, Hamburg, winner in dairy; Cathy Yanos, 17, of R2, Douglassville, state winner in home environment; and Ann Deborah Linton, 16, of 1530 Oak Lane, Reading, winner in veterinary science.

Sandy will receive an expense-paid trip to National 4-H Congress in Chicago, November 30-December 4. Both Cathy and Ann will receive $50 U.S. Savings Bonds. All three will be eligible to attend the Chicago conference and compete for awards at the national level.

Support of the dairy project is provided by the Insurance Company of North America; the home environment project by the S&H Foundation, Inc.; and veterinary science by the Upjohn Company.

Mr. Carroll L. Howes, associate 4-H-youth division leader at The Pennsylvania State University, who announced the selections, said they were judged on the basis of project work, leadership ability, and participation in county and state activities.

They were picked from among the 145,000 youth who take part in the Extension Service educational 4-H program.

Sandy Miller

The daughter of Mr. and Mrs. Ernest Miller, Sandy is a student at the Agricultural and Technical College at Farmingdale, New York.

Sandy Miller

She has been a 4-H member for eight years.

A member of the Virginville 4-H Dairy Club, Virginville 4-H Sewing Club, and Berks County 4-H Baby Beef Club, she served as president, vice president, secretary, and news reporter, and assisted with club activities and events as a teen leader.

The state dairy contest winner completed projects in dairy, clothing, baby beef, cooking, photography, teen leadership, and veterinanry science.

Locally, she participated in the fair, 4-H field day, camp, dress revue, and Dairy Princess Contest.

Sandy also took part in the All-American Dairy Show, Regional 4-H Dress Revue, State 4-H Achievement Days, Pennsylvania 4-H Congress, and Pennsylvania Association of Farmer Cooperatives Summer Youth Institute.

She was selected as Berks County's Outstanding 4-H Girl and was a semi-finalist in the 1975 Distinguished Junior Member in the Dairy Contest.

Commenting on the values of the educational youth program, Sandy said: "Through 4-H, I've learned responsibility, leadership, and the ability to talk in front of a crowd."

Cathy Yanos

The daughter of Mr. and Mrs. Robert Yanos, Cathy is a freshman at the Hospital of the University of Pennsylvania. She has been a 4-H member for nine years.

A member of the Exeter 4-H Community Club and Berks County 4-H Baby Beef Club, she served as president, secretary, treasurer, news reporter, song leader, and game leader. She also served as a teen leader the past four years.

The state home environment contest winner completed projects in money management, flower arranging, candlemaking, design with line, three units of home management, beef, clothing, cooking, teen leadership, bicycling, and swine.

Cathy took part in the county 4-H dress revue, public speaking day, beef roundup, fair, and camp.

She also participated in the

Cathy Yanos

Regional 4-H Demonstration Day, State 4-H Achievement Days, Interstate 4-H Exchange Program, State 4-H Capital Days, and Citizenship Short Course.

She was named the 1975 Berks County Dairy Princess and was selected as the Outstanding 4-H Girl in Berks County in 1974.

"4-H has taught me how to understand people and was instrumental in my selection of a career in nursing," Cathy said.

Ann Deborah Linton

The daughter of Mr. and Mrs. Jack A. Linton, Ann is a senior at the Mt. Penn Senior High School. She has been a 4-H member for nine years.

A member of the Hereford 4-H Horse Club, she served as president, vice president, secretary, and treasurer, and was a teen leader the past four years.

Ann Linton

The state veterinary science contest winner completed projects in three units of veterinary science, three units of teen leadership, horse, sewing, cooking, home improvement, woodworking, and safety.

In Berks County, she participated in the 4-H demonstration day, horse bowl, horse judging, dress revue, and camp.

Ann also took part in Regional 4-H Teen Leaders Retreat, Regional 4-H Horse Bowl, Regional 4-H Horse Show, State 4-H Achievement Days, 4-H Exchange Program, and Pennsylvania Farm Show.

Ann said: "4-H has given me sympathy and the respect of other people. It has also shown me the meaning of responsibility."

They are three of 40 Commonwealth 4-H members being selected as state winners in the various project categories.

BICENTENNIAL BYPATHS
OUR COUNTRY 200 YEARS AGO

In October, 1775, winter closed in on American forces enroute to Quebec. Supplies of clothing and food were

inadequate. Each portage became more difficult as rear divisions were forced to transport the sick as well as the supplies.

Plowing champions compete

Ten former state plowing champions gathered October 2 at the Milton Hershey School Farms in Hershey to compete in a "run-off" match designed to determine the three men who will represent Pennsylvania in next year's U.S.A. Plowing Matches.

The State Plowing Contest Committee, sponsor of the champion's class event, held this year for the first time, will help conduct the 1976 national event. It will be held at or near the Rock Springs Agricultural Research Center of The Pennsylvania State University next August.

Winners of the three divisions were: small plow division, Robert N. Miller, of R1, Millersburg; large plow, Frank N. Kocevar, of R1, Harrisburg; and contour, Harvey S. Sauder, of R1, New Holland.

Miller was state winner in 1973; Kocevar won four titles, in 1960-62-65-68; and Sauder, a champion in 1974.

Burton S. Horne, Penn State Extension agricultural engineer and president of the State Plowing Contest Committee, pointed out that state plowing matches have been held during the past 24 years. He added that plans are underway to hold a champion's class event again next year.

Frank R. Burkhart, left, of 1030 Silver Spring Road, Lancaster, who has won three state plowing championships, one each in the contour, small plow, and large plow divisions, receives "triple crown" trophy from Burton S. Horne, Extension agricultural engineer at The Pennsylvania State University and president of the State Plowing Contest Committee. Burkhart won the large plow contest in 1970, the small plow division in 1974, and contour contest in 1975. He is only the second plowman to win a "triple crown" award in the 24-year history of the state plowing matches.

Three former state plowing champions won their divisions in the champion's class contest held in Hershey. From left: Frank N. Kocevar, of RD1, Harrisburg, large plow champion; Harvey S. Sauder, of RD1, New Holland, contour division winner; Robert N. Miller, of RD1, Millersburg, small plow champion; and Burton S. Horne, Penn State Extension agricultural engineer and president of the State Plowing Contest Committee.

THE GOOD WORD from the Bible

The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as he rose.

It shall blossom abundantly, and rejoice even with joy and singing; glory of Lebanon shall be given unto it, the excellency of Carmel and Sharon; they shall see the glory of the LORD, and the excellency of God.

Isaiah 35: 1, 2

Quarter million Simmentals registered

BOZEMAN, Mt. - American Simmental Association, which had registered only 26 head in January of 1970, passed the quarter-million mark on August 28, 1975, according to Donald D Vaniman, ASA executive secretary.

A ¾-blood Simmental heifer, bred and owned by Maurice Jackson of Jackson Farms, Joy, Illinois got the benchmark registration number of 250,000, Vaniman said.

The heifer (MLJ 531F) was calved unassisted on September 10, 1974, and had an actual brith weight of 78 lbs. Her 205-day adjusted weaning weight was 536 lbs., ranking her eighth among 18 contemporaries at Jackson Farms. Her contemporaries adjusted weight averaged 514 lbs. at 205 days of age, giving her an above-average weaning weight trait ratio of 104.

Sired by the purebred Simmental bull Toni (ASA 477), the heifer is out of a half-blood Simmental X Angus dam. While there are no color restrictions in the Simmental registry, performance testing is mandatory and purebred American Simmentals are being upgraded from nearly every breed in the country, Vaniman commented.

Weaning weight of the ¾-blood heifer represents an 87 lb. improvement over her ½-blood Simmental dam. Sired by the purebred Simmental bull Parisien (ASA 1), the dam's 205-day adjusted weaning weight was 449 lbs. Her weaning weight ratio was 96 among 15 contemporaries whose 205-day adjusted weight averaged 468 lbs. This 87-lb. improvement over her dam exceeds the 1975 National Simmental Sire Summary total progeny average of 66 lbs. increase in weaning weight of ¾-blood Simmental heifers over ½-bloods.

The ¾-blood heifer also weighed two lbs. less at birth than her mother, Vaniman noted. "This shows that when animals are bred according to performance data, higher weaning weights can be achieved without increasing birth weights," he said.

Registrations in the American Simmental Association herd book have increased by more than 100,000 head in the last twelve months. To date, the Association has 7,644 members, with each member registering a current average of 14.6 animals per year.

Something's Wrong

An elderly man who lived alone ate dinner every night in the same restaurant, at the same table One night, after he had paid his bill and put on his hat, he walked up a wall, across the ceiling, down another wall and out the door "That's odd," said the waiter, "usually he says good night"

Polish trade agreement made

WASHINGTON - Secretary of Agriculture Earl L. Butz and Polish Minister of Agriculture Kazimierz Barcikowski and a group of senior ministry of agriculture officials completed discussions on long term trade cooperation on Sept. 29.

The Polish Minister expressed an interest in long-term purchases of grains and other commodities on the U.S. market. Secretary Butz noted that the U.S. fully intends to meet the needs of its traditional customers around the world and that he would do everything possible to assure that Poland's present and future needs for agricultural products will be met. He also noted that the detailed import plans now being provided by Poland are the best way to assure that supplies will be available from the United States. The Secretary and the Minister agreed on the principles of a supply understanding between the U.S. and Poland. The actual quantities to be covered by this understanding will be studied with a view to coming to agreement during the Secretary's upcoming visit to Poland.

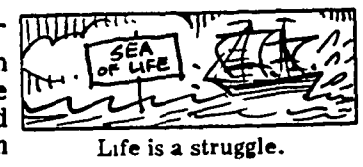
Because of poor climatic conditions in Poland and other Eastern countries, the Minister confirmed that Poland needs to purchase additional quantities of grain this calendar year. Secretary Butz replied that every effort will be made to assure that Poland can purchase the commodities it still needs from the U.S.

The Secretary and the Minister agreed that further development of the principles set forth in the U.S.-Polish Joint Statement on Development of Agricultural Trade signed in Washington on Oct. 8, 1974, including the exchange of data on supply, demand and trade, is in the best interest of both Poland and the United States since it assures harmonious development of agricultural trade between the two countries.

In addition to their trade discussions, Secretary Butz and Minister Barchikowski reviewed the status of economic and scientific-technological cooperation between the two countries. There was agreement that the operation of joint research projects, the exchange of specialists to study at universities and research institutes, and the exchange of young trainees to work on farms are desirable forms of cooperation. USDA has agreed to help the Polish Ministry of Agriculture identify scholarships and fellowships for which Polish scientists might compete.

New dairy goat association organized

A Blue Mountain Area Dairy Goat Association is being organized to cover parts of Lehigh, Carbon, Schuylkill, and Berks counties. On September 11 a group of 20 enthusiastic dairy goat owners met in the Schuylkill County Extension Office to discuss formation of a dairy goat association. The group decided to form an association with several purposes and goals in mind. The association hopes to eventually publish a monthly news letter, to serve as an educational source for information on dairy goats, set up tours, discuss marketing of milk and milk products, established a buck interrelating program and many other services relating to management of a dairy goat herd. The new group encourages anyone with an interest in dairy goats to join their group. The next meeting will be held October 16 at 7:30 p.m. in Room 110 at the Penn State University Branch Campus, Route 61 south of Schuylkill Haven. Mr. and Mrs. Seidel, President and Secretary of the Susquehanna Valley Dairy Goat Association will be present to discuss feeding and management of the dairy goat herd, as well as answer any questions the group may have. Any questions on the group's activities can be directed to Jean Bell 717-385-3431, or Terry Bortz, Schuylkill county agent - Agriculture 717-385-3431.



Life is a struggle.

PUBLIC AUCTION
VALUABLE REAL ESTATE
(85 ACRE FARM)
FRI., OCT. 24, 1975
2 P.M.

Corn blight studied

UNIVERSITY PARK - Plant disease specialists at Penn State University are conducting research on a disease management program to avoid future epidemics like Southern corn leaf blight which cost U.S. farmers one billion dollars in 1970.

One objective is to determine what level of disease creates economic losses, stated Dr. Richard R. Nelson and Dr. John E. Ayers, both with the College of Agriculture at Penn State.

Working with Southern corn leaf blight as a model, the researchers are now able to manipulate the mount of infection of the disease and the rate at which is spreads.

"To develop an effective corn blight management program, we need to know how long the disease has been in a field - since a short time infection should mean less crop damage than otherwise," Nelson affirmed.

Ayers indicated the model assumes that during any given time, there are no varieties resistant to Southern corn leaf blight. Actually, several varieties are available that resist the damaging race T blight that ruined many corn fields in 1907.

ROXANNE, the Great Dane, gives John McGonigal a friendly lick. Son Brad, 14, months old, does not seem worried about the activities on the bench in Stabler Park in Wilmington.

BIG COW SALE
THURSDAY, OCTOBER 16, 1975
7:30 P.M.

Sale held at: My Maryland farm ½ mile NW at Woodsboro on Route 550, Frederick County, Maryland.

125 head of Top Quality Cows and Heifers which come from herds in Wisconsin, Canada and New York. All are the best and hand picked by us from the best herds.

One half will be Pure Breds from the Best Sires in Eastern United States and Canada.

SPECIAL MENTION

A 3 yr. old DOWNALANE REFLECTION EMPEROR daughter. Fresh with heifer calf, born Sept. 21, 1975, from CORNERSET ANTURION MEDALIST milking 80 lbs. a day. This is a good, big strong cow never classified. I am sure she will go VERY GOOD.

There will be about 40 first calf heifers.

Farmers, if you need good cows, this is the best selection we've ever had for a Sale. Come and see for yourself.

All cows will be just fresh or close to fresh. There will be several Pure Bred calves sold also.

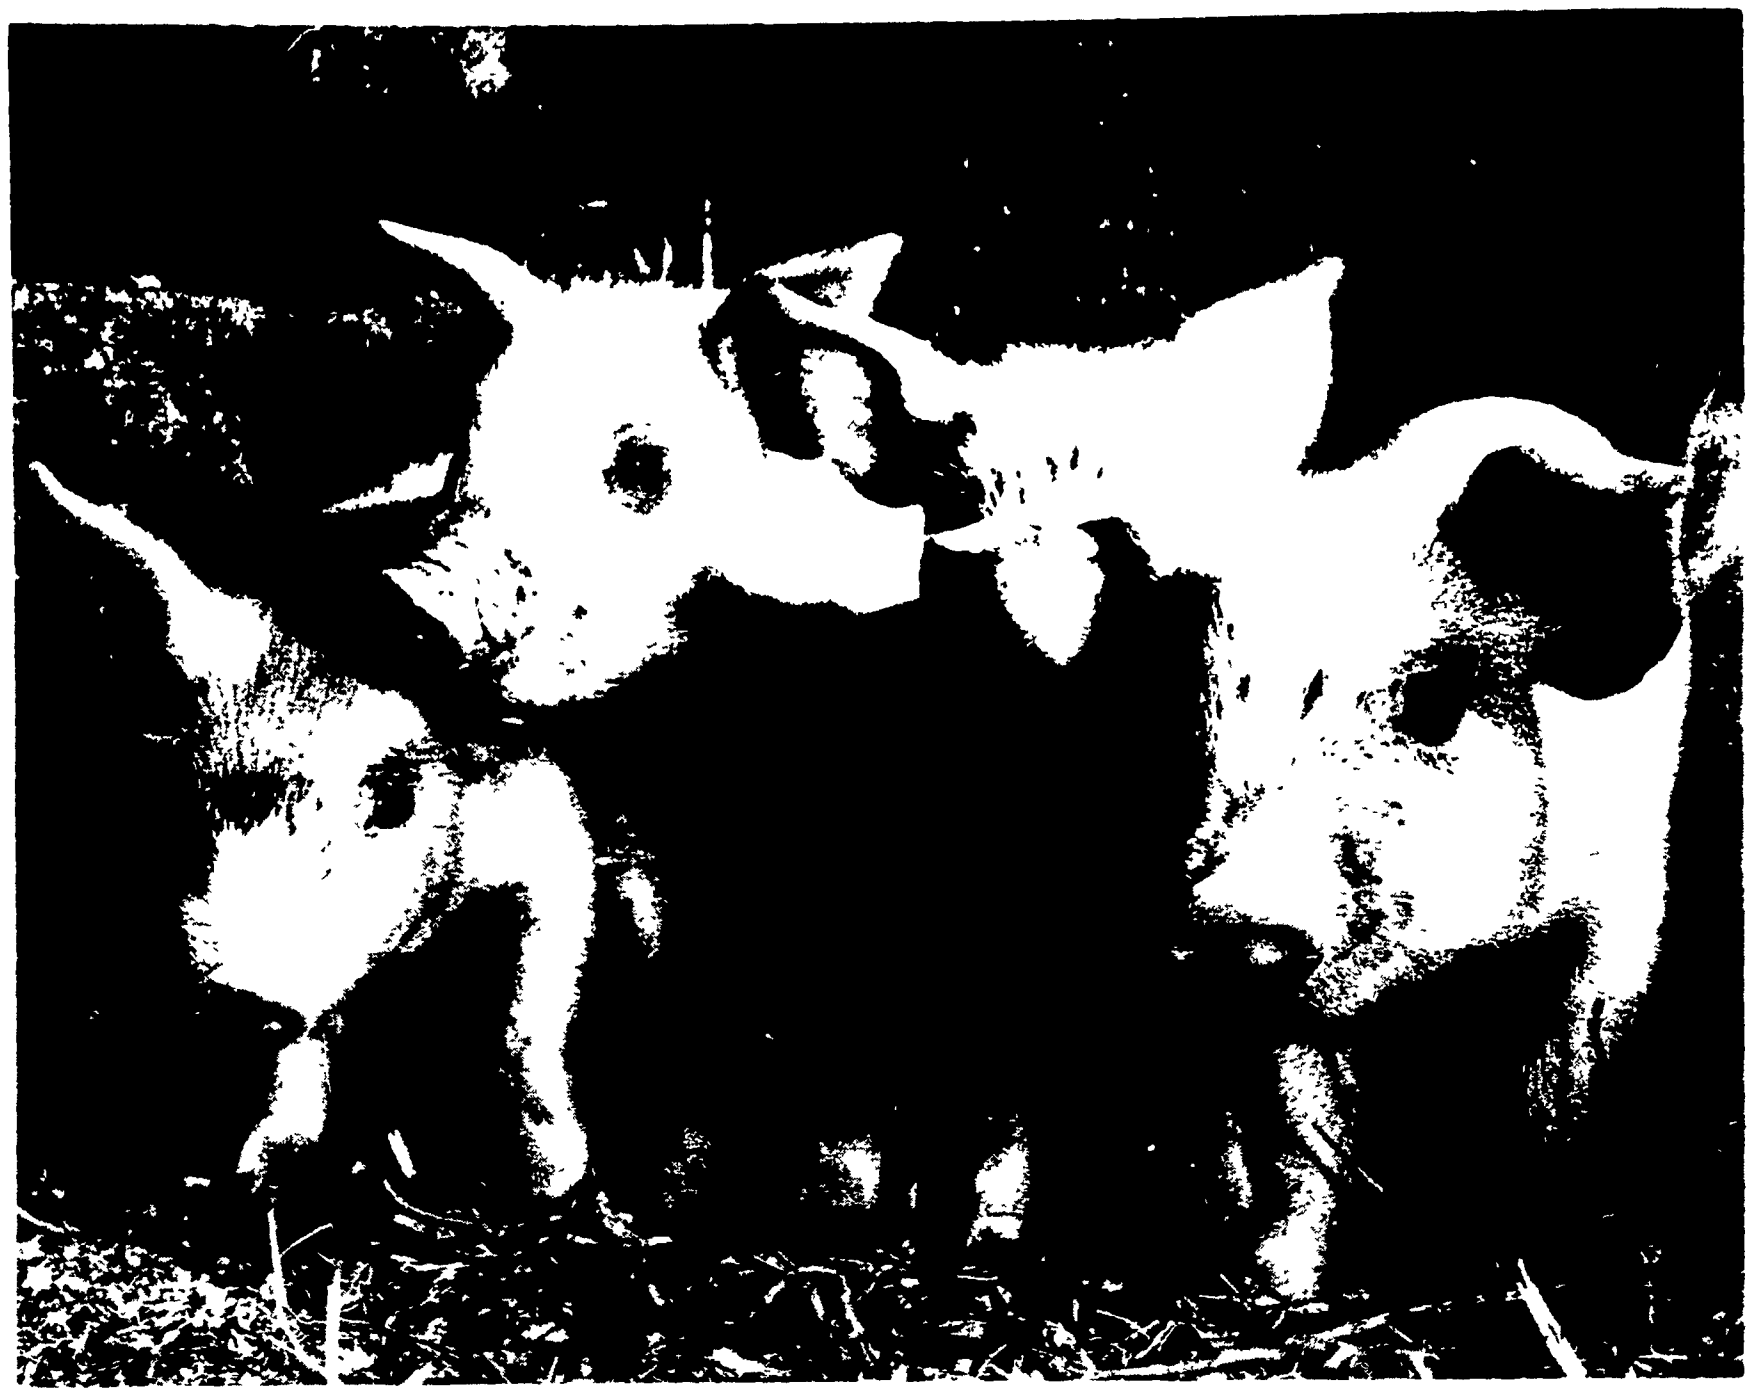
AGWAY



How long 'til Squealer time?

Agway Squealer. And how little pigs do love it! So weaning isn't much of a problem any more. Just give them a taste of Squealer and that's it.

That's why Squealer is the fastest-growing feed in the Agway Swine feed line-up. Try Agway Squealer on your next litter and see the difference.
